Authentication

Authentication is the **process of confirming the identity of a user trying to gain access to an application and its data**; it's an essential part of the application's security.

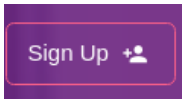

To access more functionalities and features of the **DocCerts** you have to complete the signup process first (If you don't already have an account) from the home page.

You can also sign in to your account, if you already have one by clicking on the Sign in button.

These two buttons are displayed in the home page's header.

1. Sign up

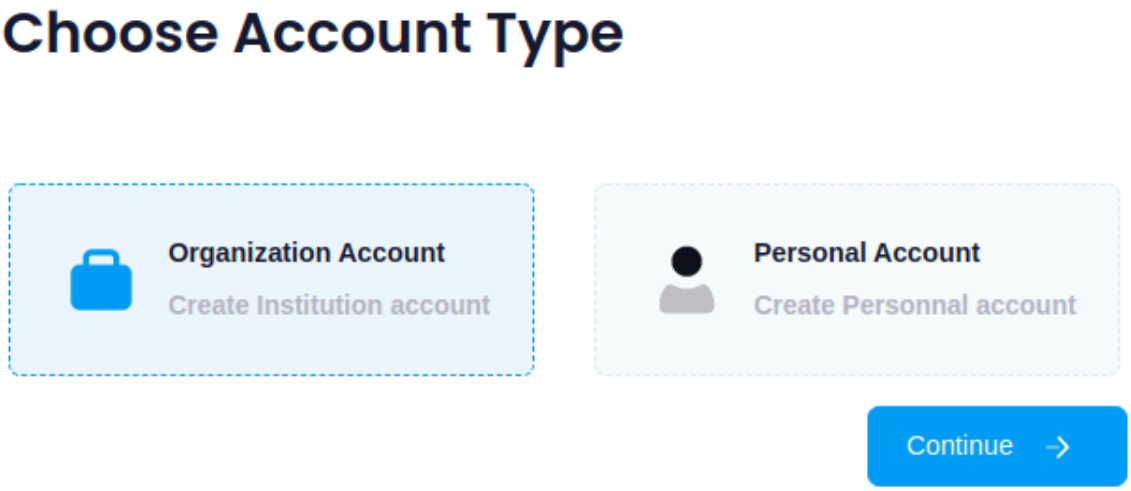

DocCerts provides two types of registration :

- Organization account : For institutions and companies.
- Personal account : For individuals.

For each type there is a multi-step process where the user needs to complete a few pieces of information.

Once the user clicks on the sign up button he will be redirected to a new page with the account types, organization or personal to choose from.

The user has to choose the account type , and click on the continue button.

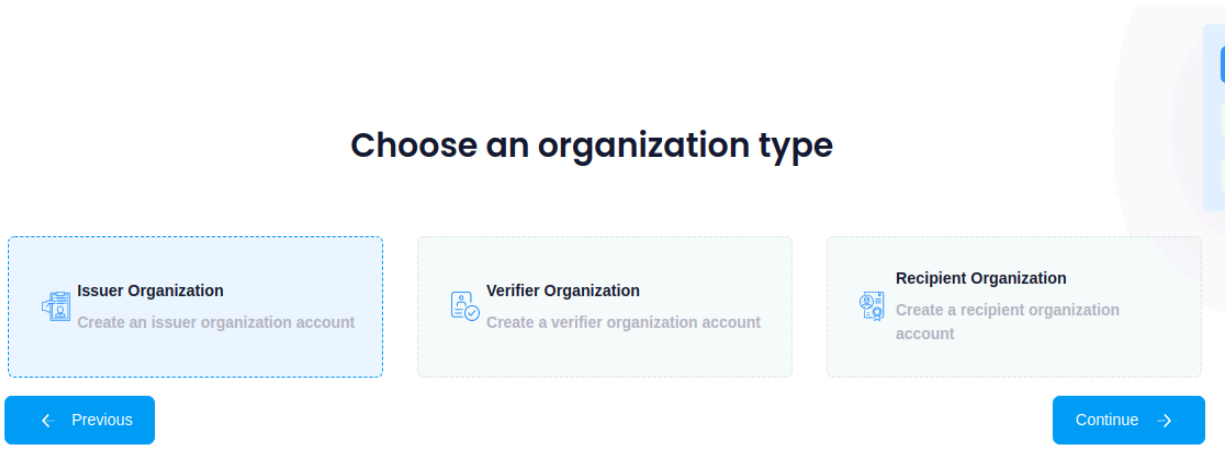

- Organization Sign up

The next step is to choose the organization type.

There are three types of organization to choose from:

- Issuer organization.
- Verifier organization.
- Recipient organization.

The user needs to select the organisation type based on the role of his institution.

After choosing the organization’s type, the user have to enter different information such as account information, user details for the administrator who will be managing the account, organization details and lastly review the information and submit.

★ Account information

In this step the user has to enter the information related to his account, these details are going to be used for login and notifications. This includes : Email, Phone, Password and Password confirmation.

Setup Your Account details

Email

_@_._

Phone

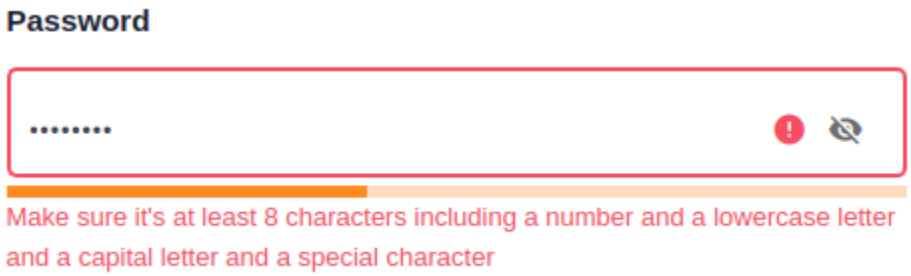

Password

Confirm Password

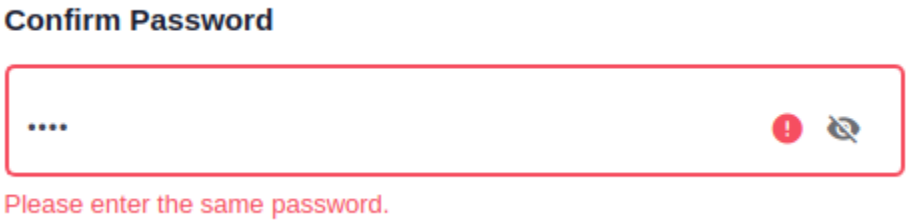

Cancel Next

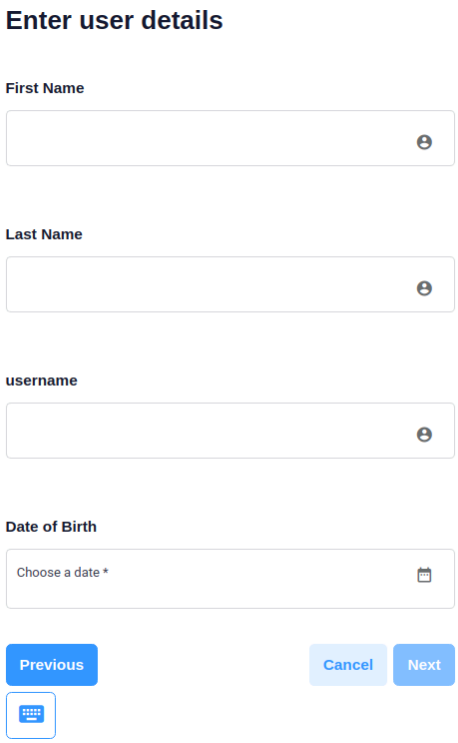

The **next** button remains disabled until the user enters valid data.
For Email and Phone : The user can choose to enter either the email or the phone or both.
For the Password : The password entered has to be at least 8 characters including a number, a lowercase letter, a capital letter and a special character.

The password confirmation must match the password provided by the user in the previous step.

★ User details

After entering the account related data, the user now has to enter other details including first name, last name, username and date of birth.

All these fields are required.
First name/last name and username must have at least 3 characters.

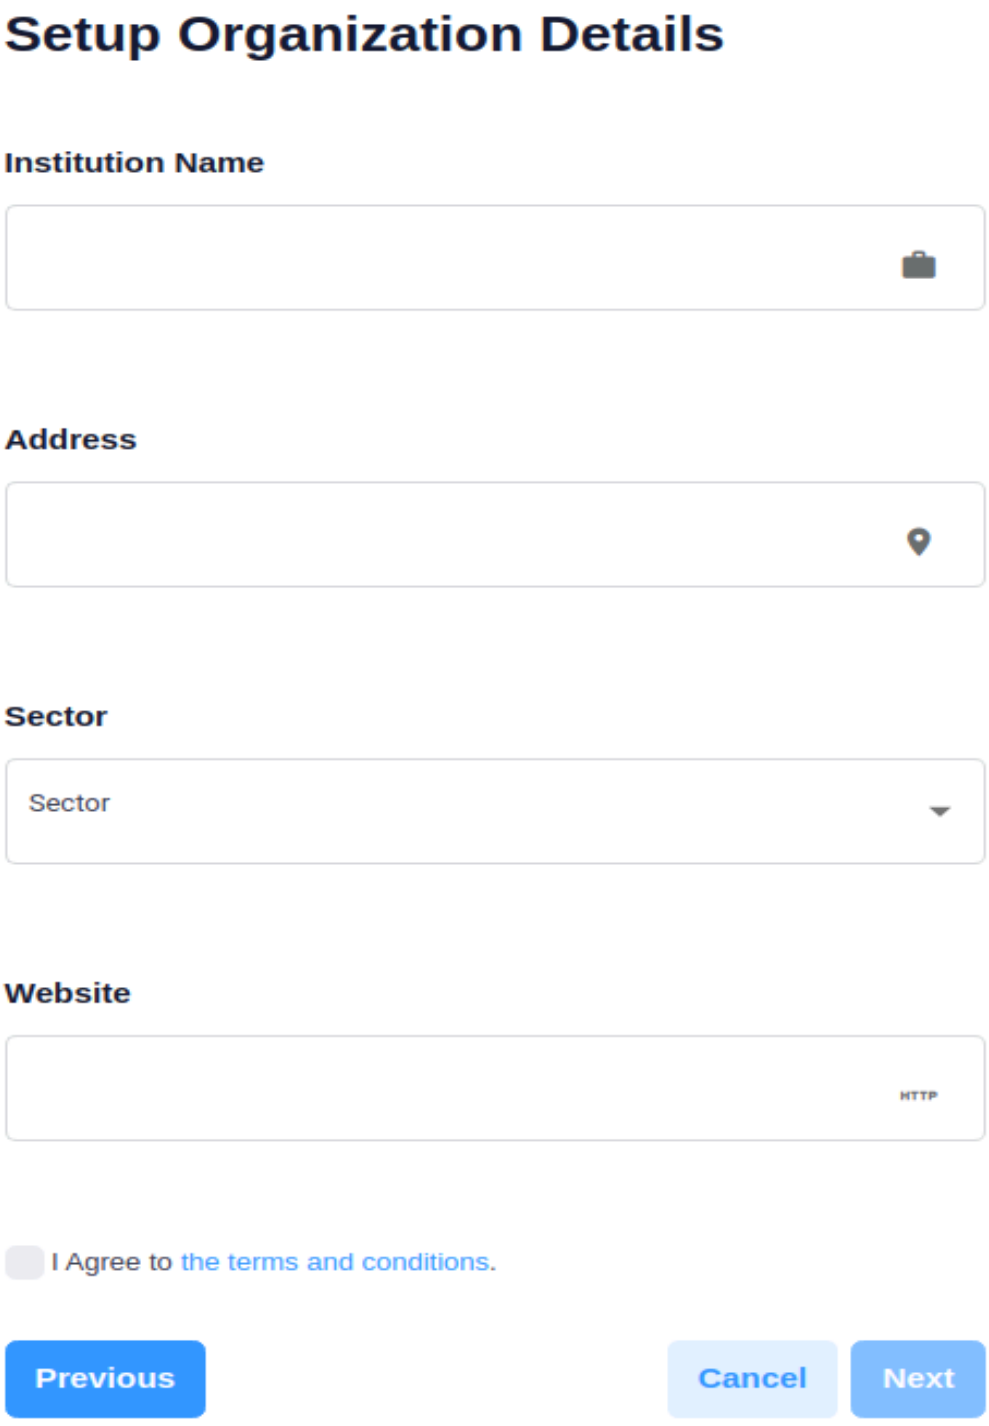

And should not include special characters.

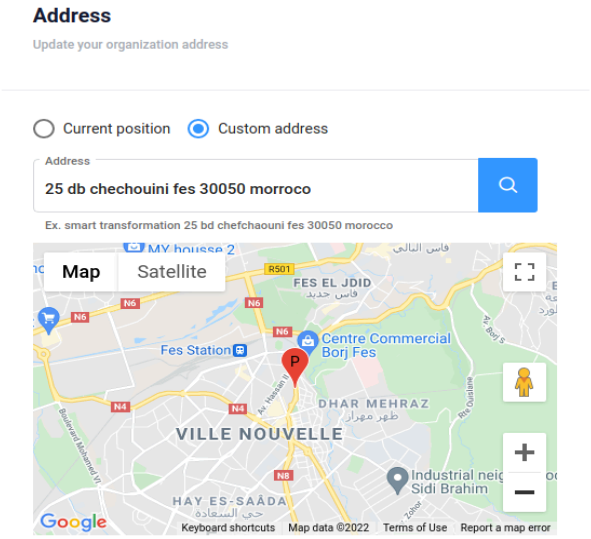

★ Organization details

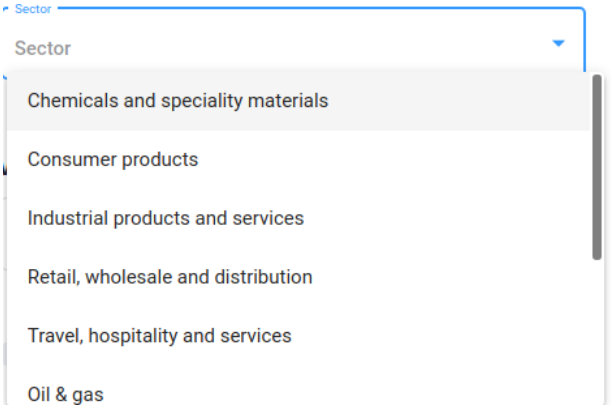

After completing the user details, the next step requires providing organization details. In this step the user has to enter the name, address, sector and the website of his organization, then agree to the terms and conditions.

The name , the Address and the sector are mandatory.

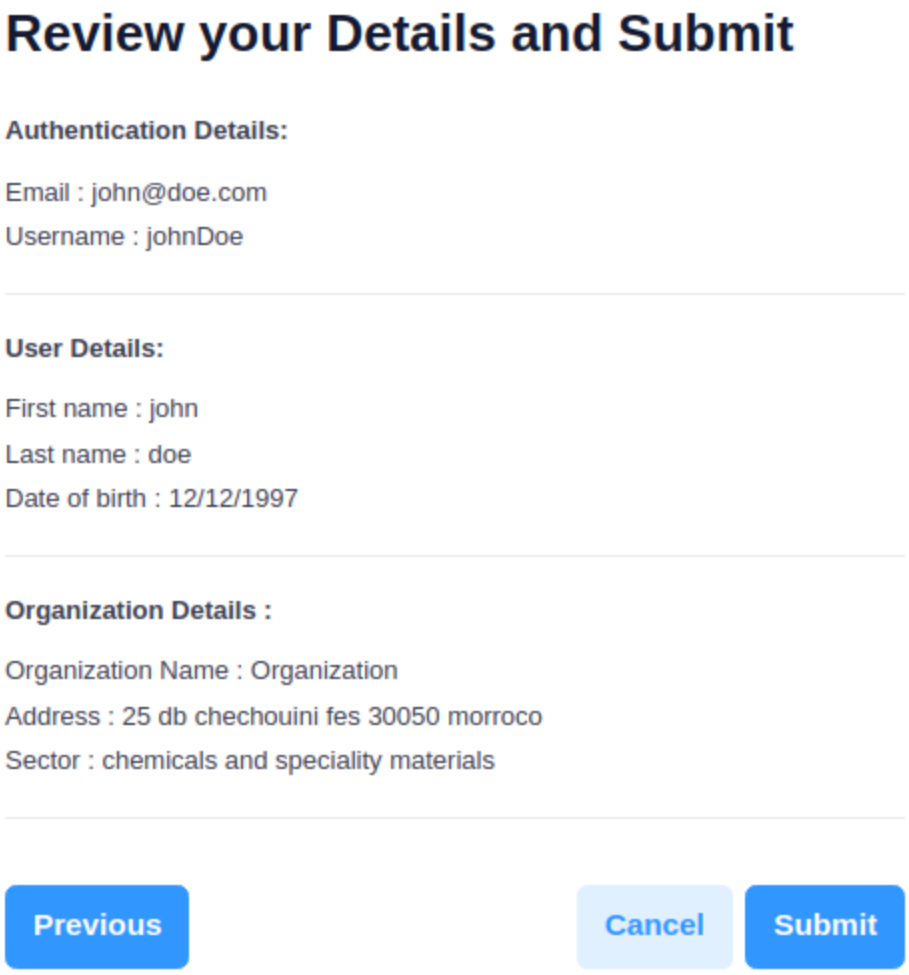

The address has to be valid, the signup page provides a map feature to help the user choose the correct address.

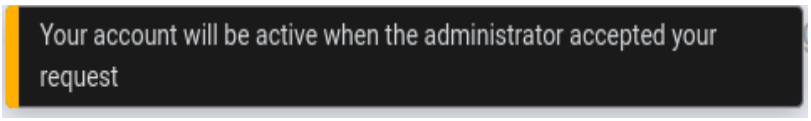

Next, the user can select the organization's sector from a list containing different domains.

★ Review and submit

Finally, the user needs to review all the details he entered before submitting, he can hit back to the previous steps to correct any information, or cancel the registration.

After submitting the organization will not be able to access the account until the account is reviewed and approved by the application administrator.

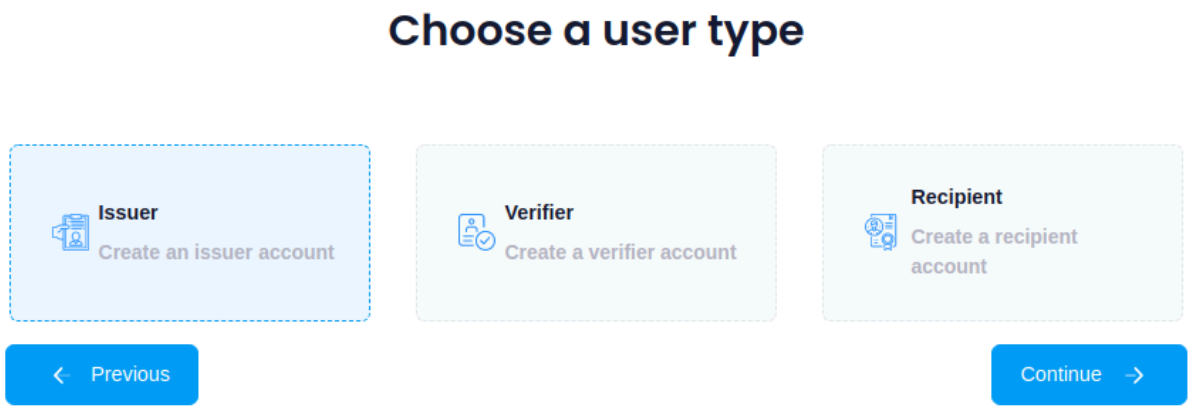

- User Sign up

After choosing the account type, personal, the next step is to choose the user type/role.

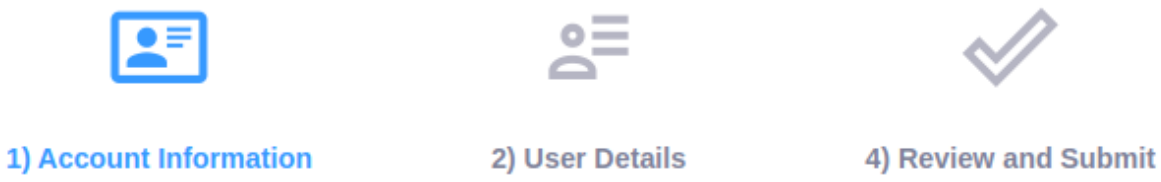

There are three types of roles to choose from:

- Issuer.
- Verifier.
- Recipient.

Once the role is selected, the user needs to click continue.

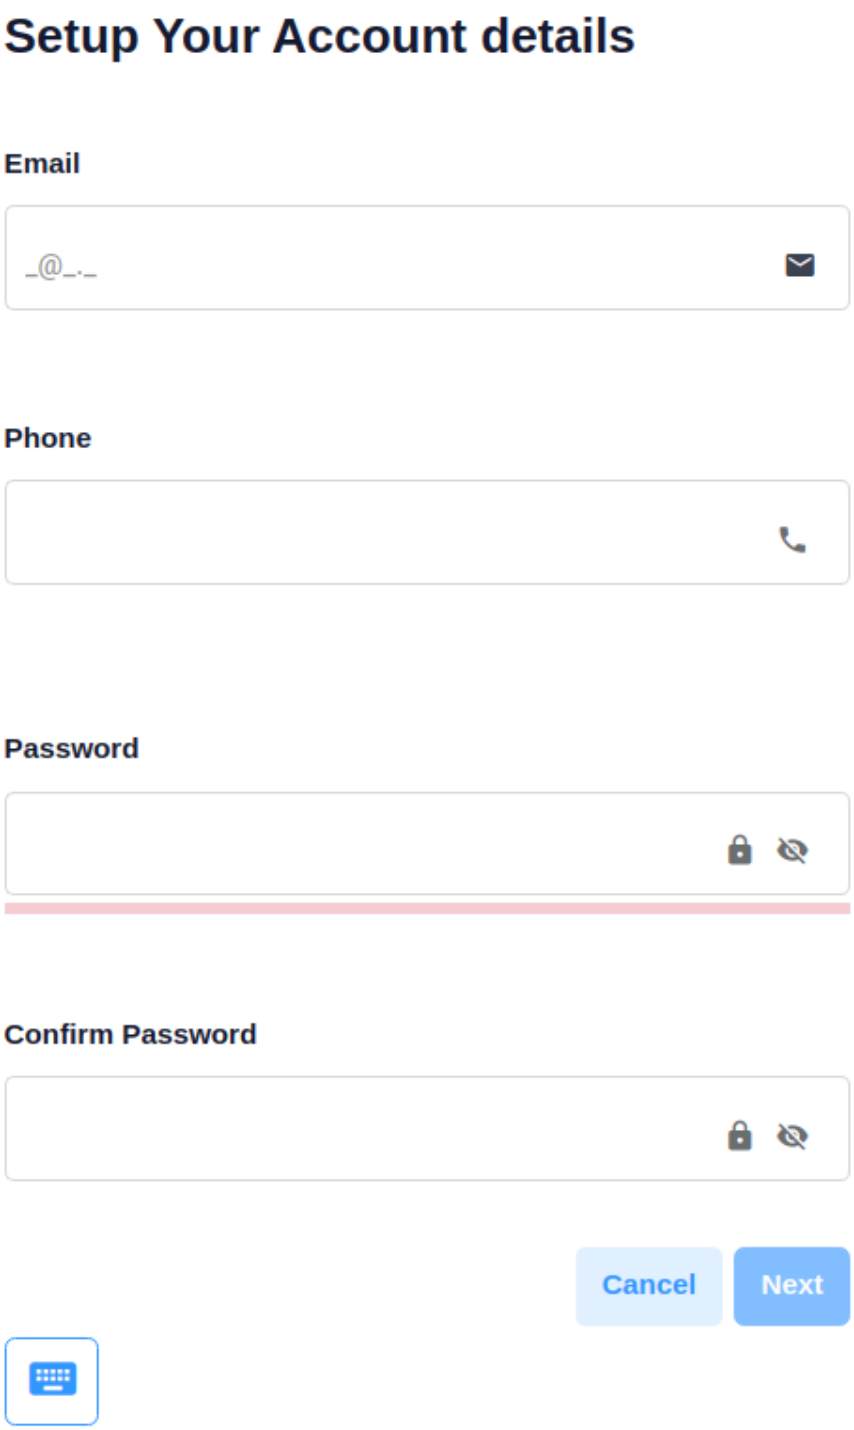

Now the user has to enter different details including account information, the user details and lastly review the information and submit.

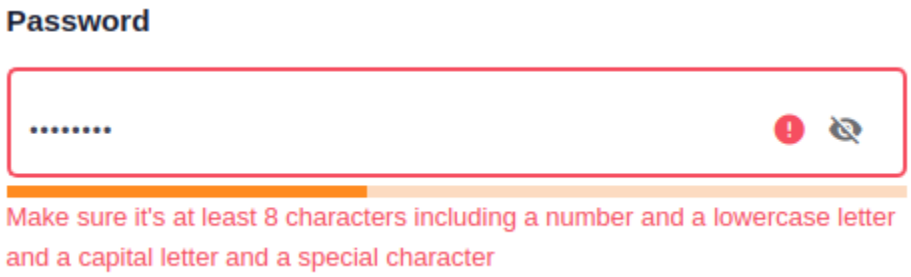

★ Account information

In this step the user has to enter the information related to his account, these details are going to be used for login and notifications. This includes : Email, Phone, Password and Password confirmation.

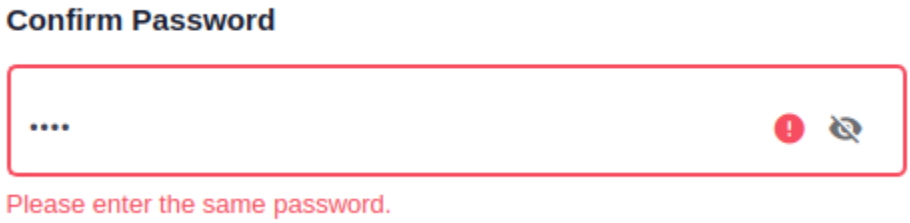

The next button is disabled until the user enters valid data.
For Email and Phone : The user can choose to enter either the email or the phone or both.

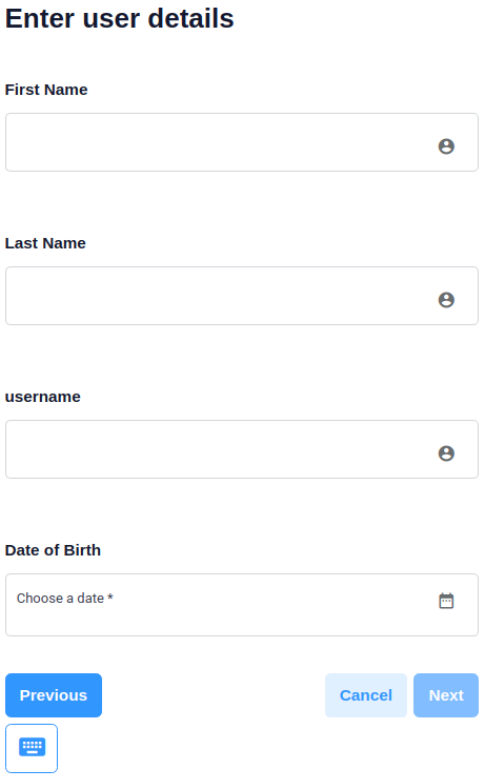

For the Password : The password entered has to be at least 8 characters including a number, a lowercase letter, a capital letter and a special character.

The password confirmation must match the password provided by the user in the previous step.

★ User details

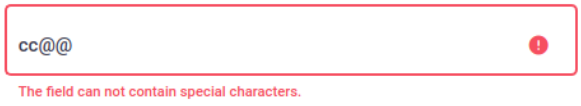

After entering the account related data, the user now has to enter other details including first name, last name, username and date of birth.

All these fields are required.
First name/last name and username must have at least 3 characters.

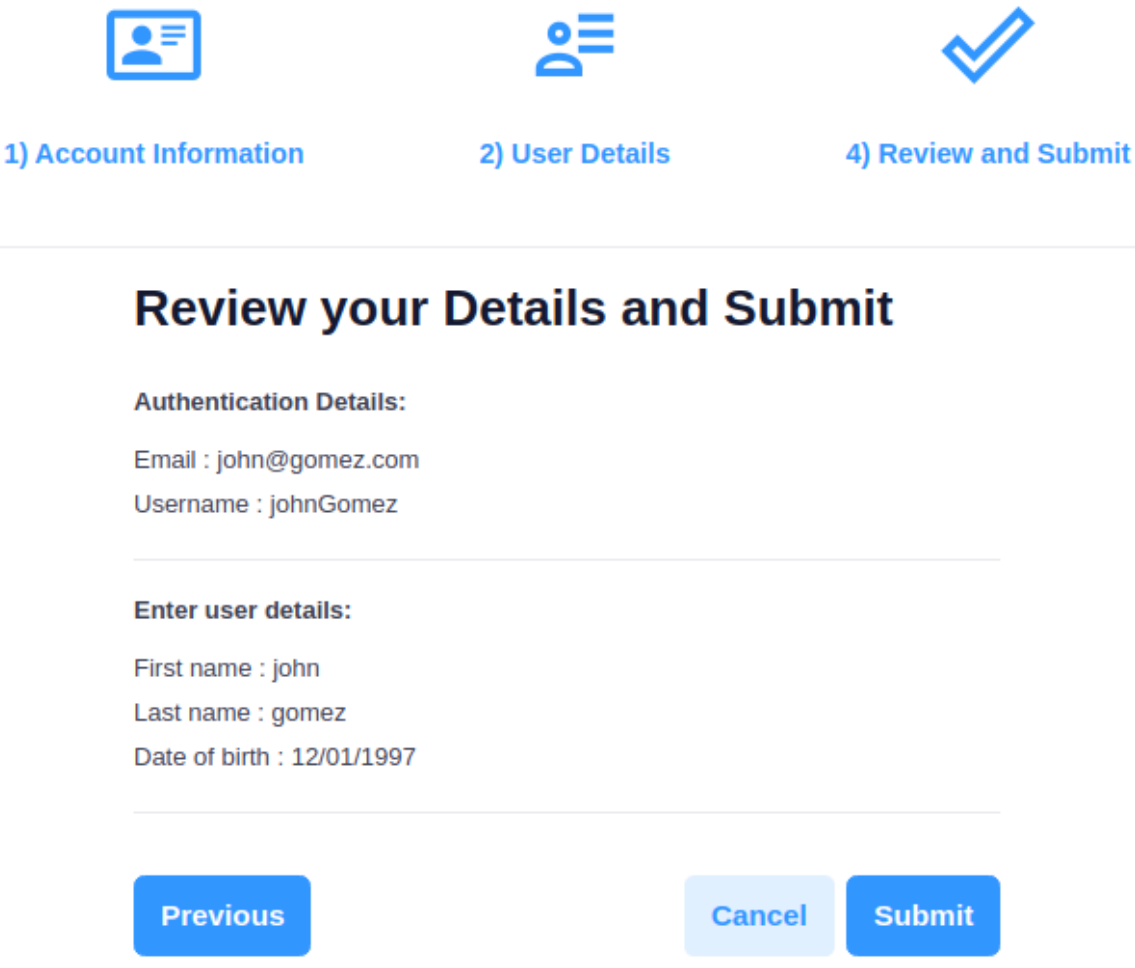

And should not include special characters.

★ Review and submit

Finally, the user needs to review all the details he entered before submitting, he can hit back to the previous steps to correct any information, or cancel the registration.

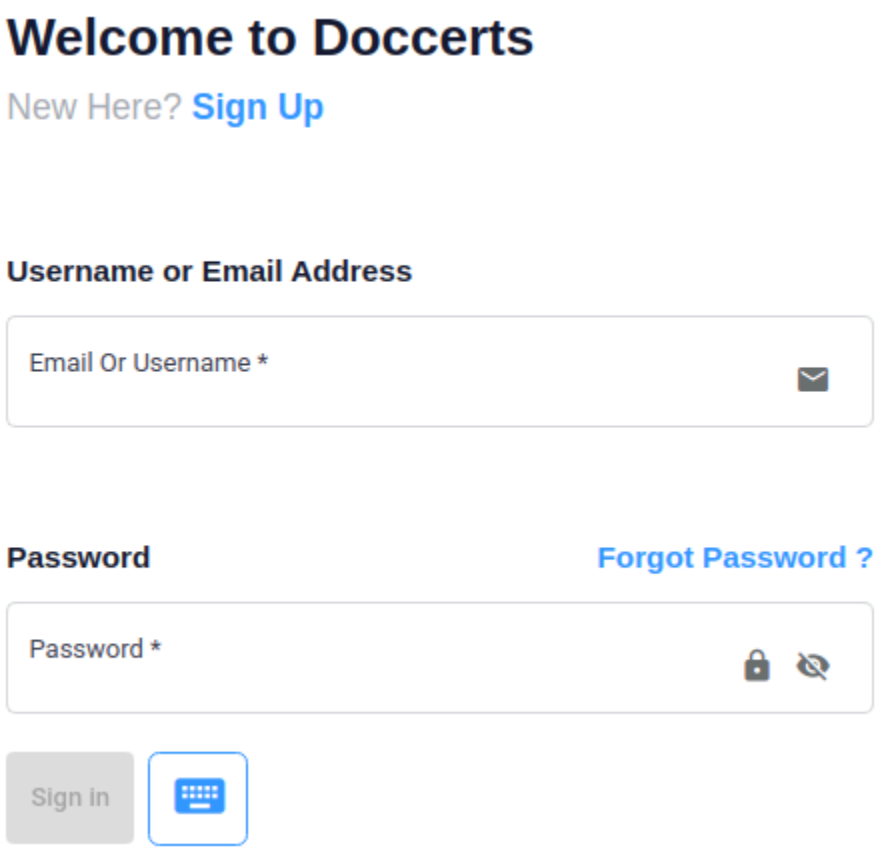

2. Sign In 

After completing the sign up, and the account has been created successfully, now the user can use his credentials to access **DocCerts**.

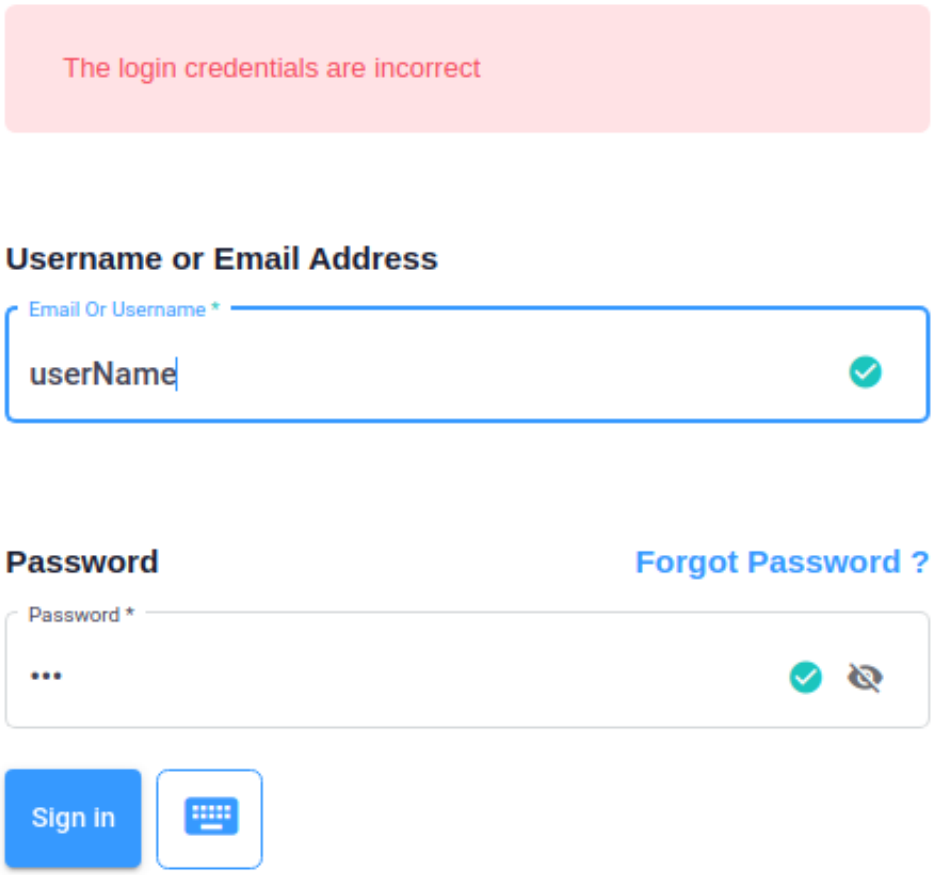

After clicking on the **sign in** button in the home page header, the user will be redirected to a new page with the sign in form.

To complete the sign in successfully the **user has to have an account** first, and it's account state must be **active**.

This form contains two mandatory fields, email/username and password.
The user must enter his correct/valid account credentials otherwise he will not be able to access the application.

The user can hide/display the password by clicking on the eye icon in case he wants to see what he is typing as a password.

If the user is not able to access the account that means either the account state is deactivated, or he forgot his credentials, in this case the user just have to click on the forgot password link on top of the password input.

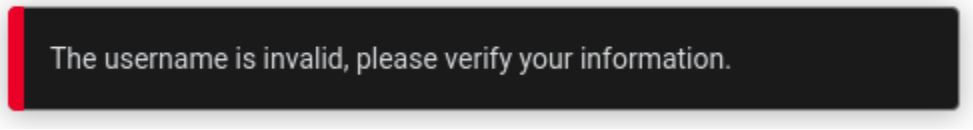

★ Forgot Password

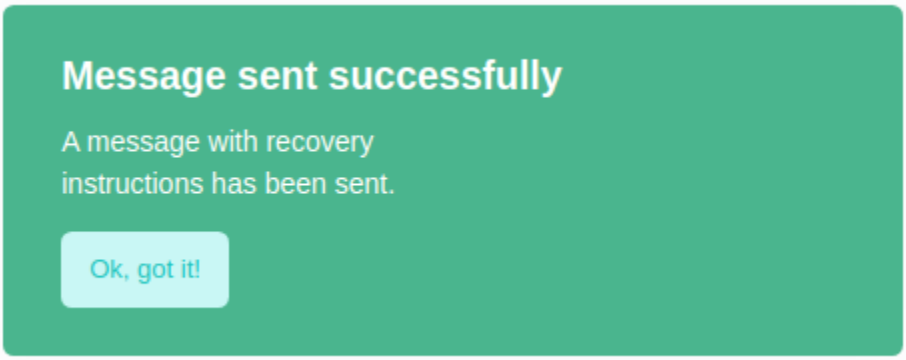

In this section the user can reset his password.

The user has to first enter a valid email/username, then the system will send a message with the reset link.

An error alert will be shown if the entered email/username is invalid.

The reset link expires after 20 minutes.

The link redirects the user to a new page with the reset form, where the user will be able to enter a new password and the password confirmation.

Once the information is submitted and the password changed, the user can use the new password to access the account again.

Issuer

This user is one of the main users of the application, he manages the creation of the categories, the addition and the invitation of recipients, the design of the certificate layout, the creation and the issuance of the final certificates.

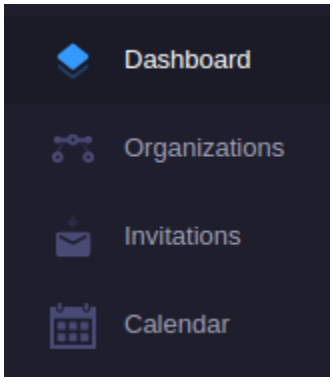

An issuer can join multiple organizations, but he can only belong to one group in each organization.

The issuer has access to multiple features as shown in the sidebar below:

Most of these features are only available for issuers that actually belong to an organization including categories, recipients, designs, certificates and document storage. The organisation has to accept the account first.

If the issuer is not part of any organization, he will only have access to the features shown below :

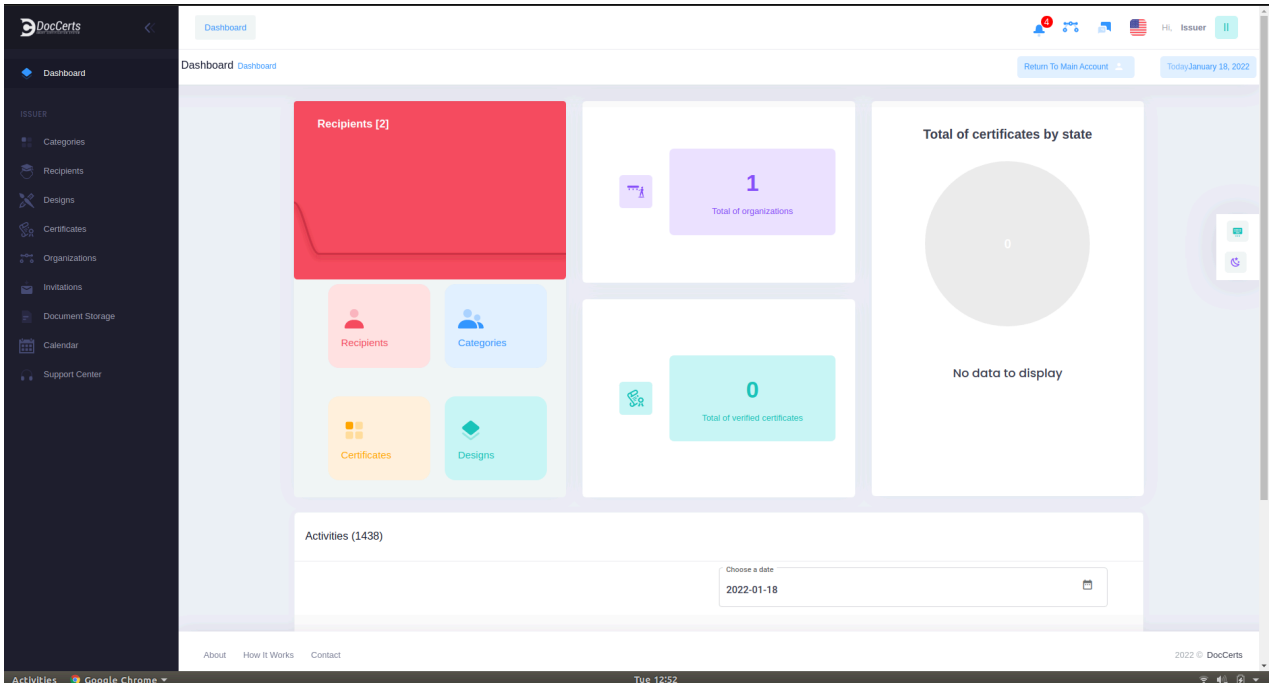

We will go into the details of each feature in the next sections.

3. Dashboard

Once logged in, the issuer will see a comprehensive dashboard providing information on different aspects of the application, for instance the number of recipients, categories, certificates, designs as well as the total of organizations, the number of verified certificates and the total of certificates by state.

In the bottom section of the dashboard the user can also see his most recent activities.

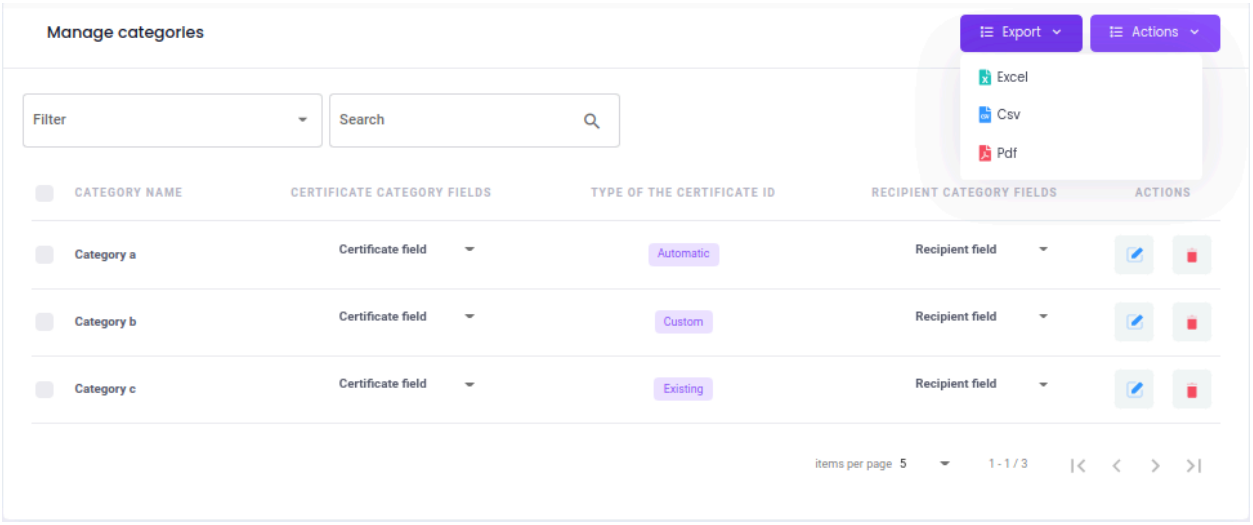

4. Categories

A category determines the necessary fields that should be included in the certificate and/or completed by the recipient.

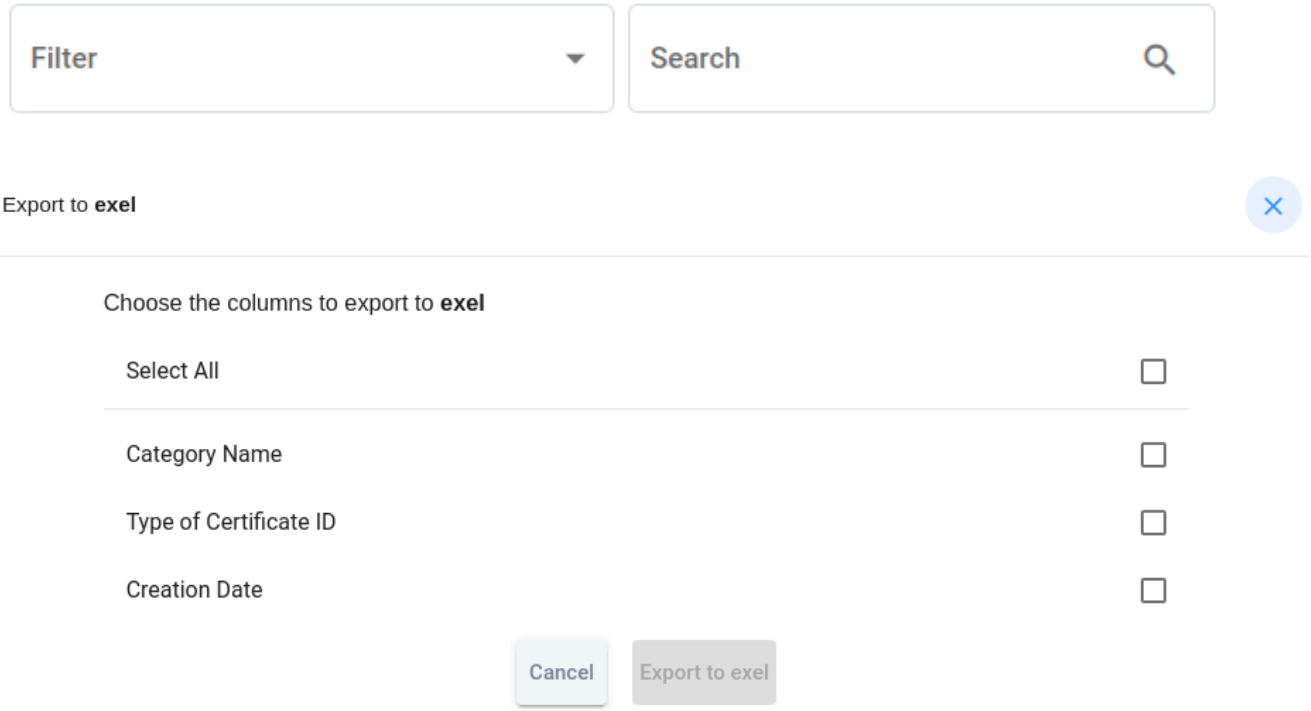

The category is one of the main elements of the issuer account , without the category the issuer will not be able to add new recipients, designs or certificates to his group.

- Manage categories

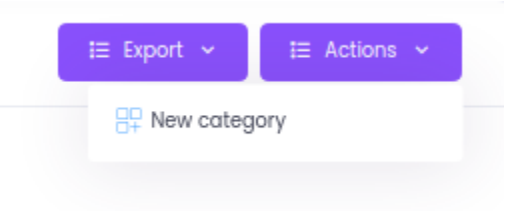

The listing of categories will provide a table with further details on each category including the category name, certificate category fields, type of the certificate id, recipient category fields and the actions column which includes buttons to edit and delete a category.

In the Listing window the user can always search or filter for a specific category and export the category information as an Excel/Csv/Pdf file.

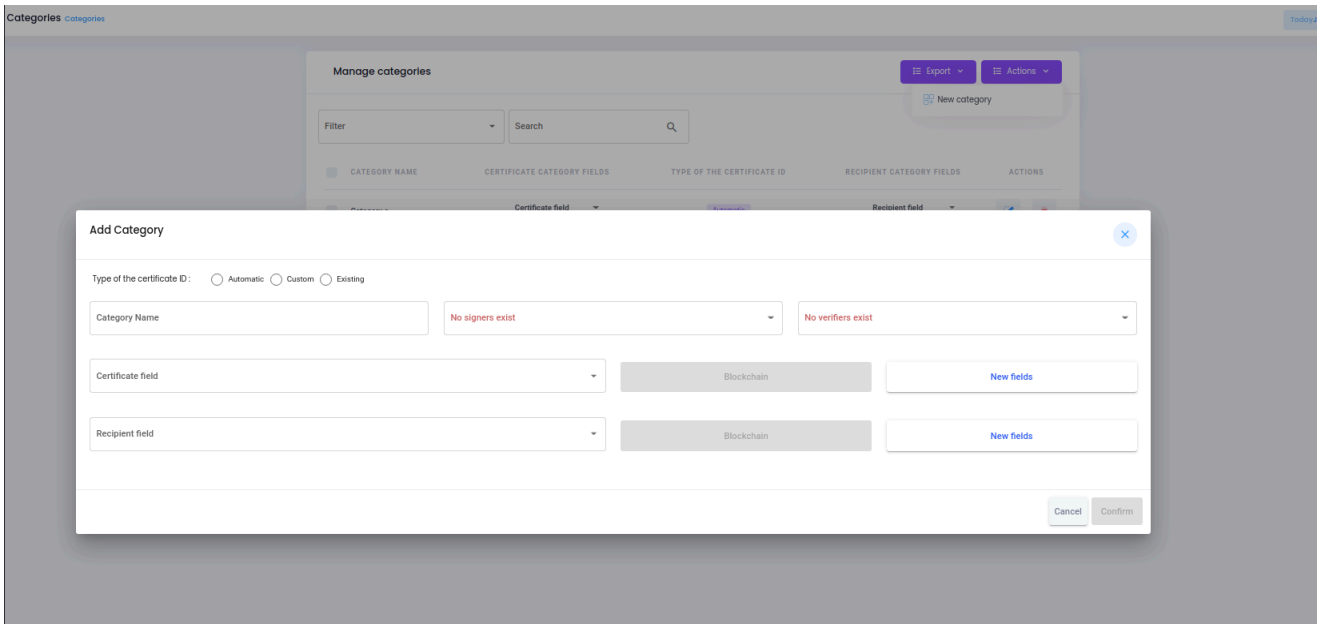

- Create new category

To create a new category, the user has to use the “New Category” button on the header under “Actions”.

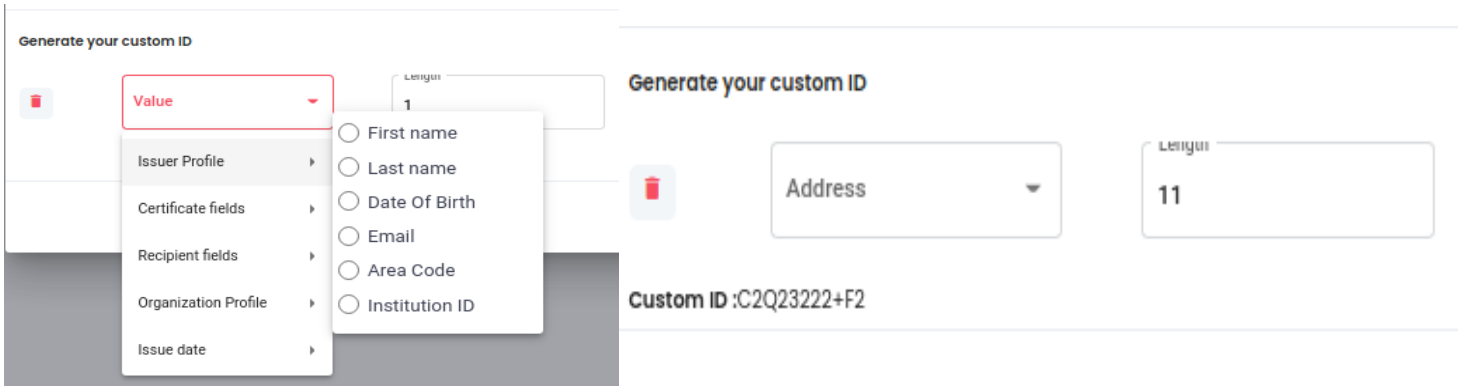

A new popup page will be shown, where the user will be prompted to enter several information.

1. Type of the certificate ID:

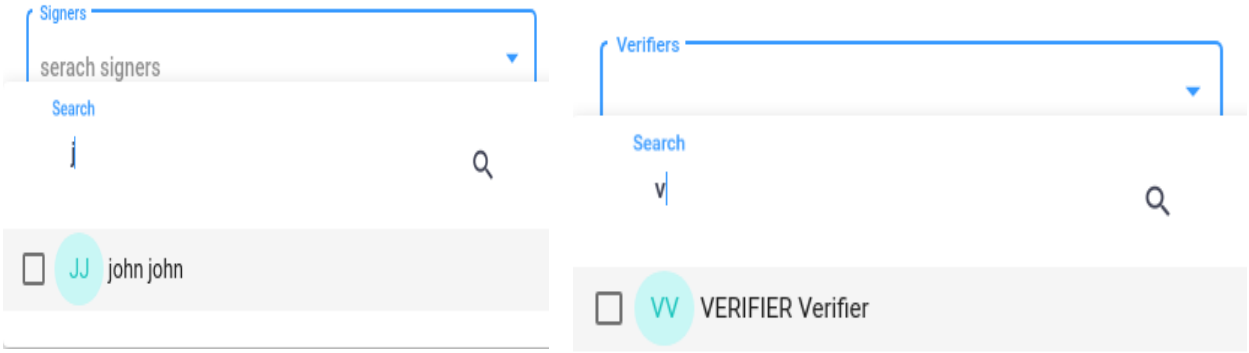

- **Automatic**: The system will generate the certificate ID automatically.
- **Custom**: The user will be able to link the certificate ID generation to a specific field in the category for example degree, equipment name etc.

- **Existing**: The system will use the ID provided by the issuer, to be entered during the certificate creation process, this is used in case the issuer is creating a digital copy of an existing certificate, he can use the current ID the certificate has, this is particularly useful for recipients with paper certificates already in hand.

2. Signers/Verifiers

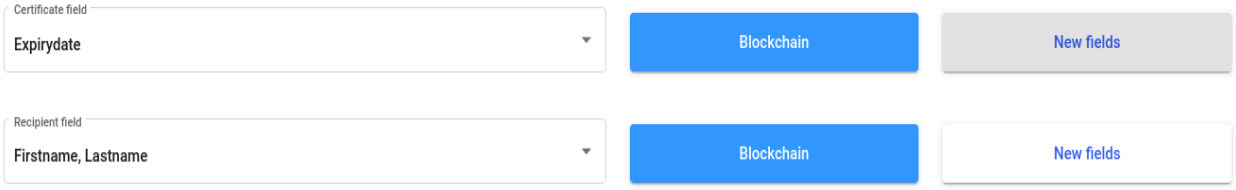

In this section the user chooses the signers who will be invited to sign the certificate,

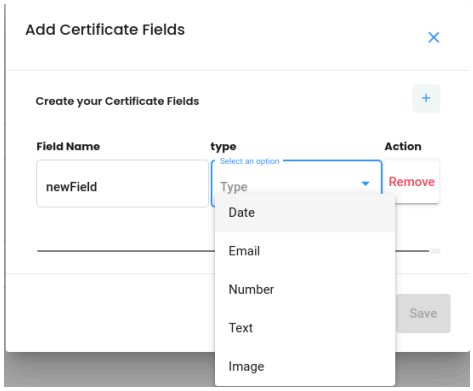

and the verifiers that have access to verify certificates issued under that category, if these fields are blanks, the certificate will be issued only by the issuer and verified by everyone.

3. Category fields

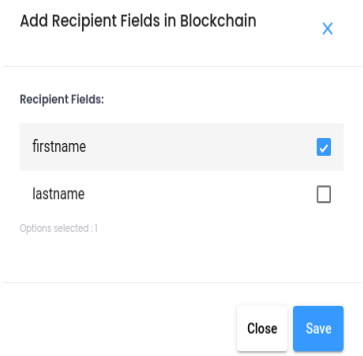

The category fields are broken down into certificate related fields and recipient related fields.

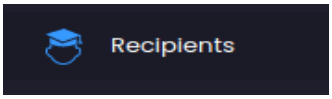

The user can select fields from the existing list or add new fields by clicking on the new fields button.

Each field has a type (Example: Text, date, image, number).

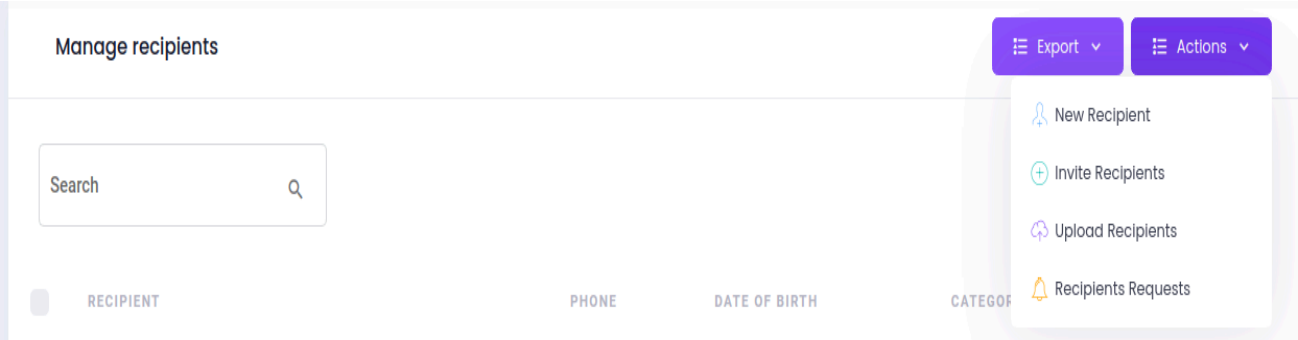

The issuer can choose to submit the field to the blockchain or not.

5. Recipients

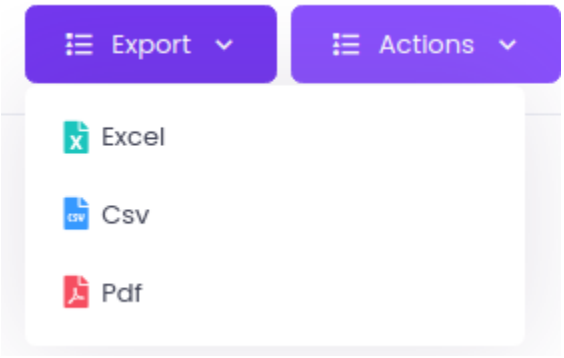

In this section the issuer can create/upload/invite new recipients, as well as manage the existing ones.

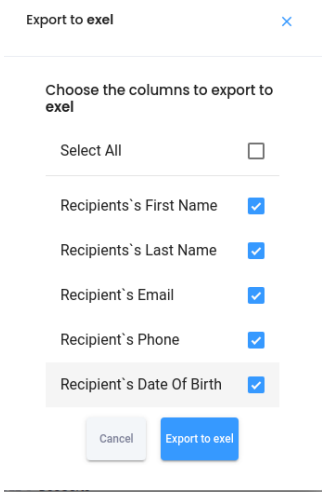

In the Listing window the user can always search an existing recipient.

The user can also export the recipient's information as an Excel/Csv/Pdf file.

- Manage recipients

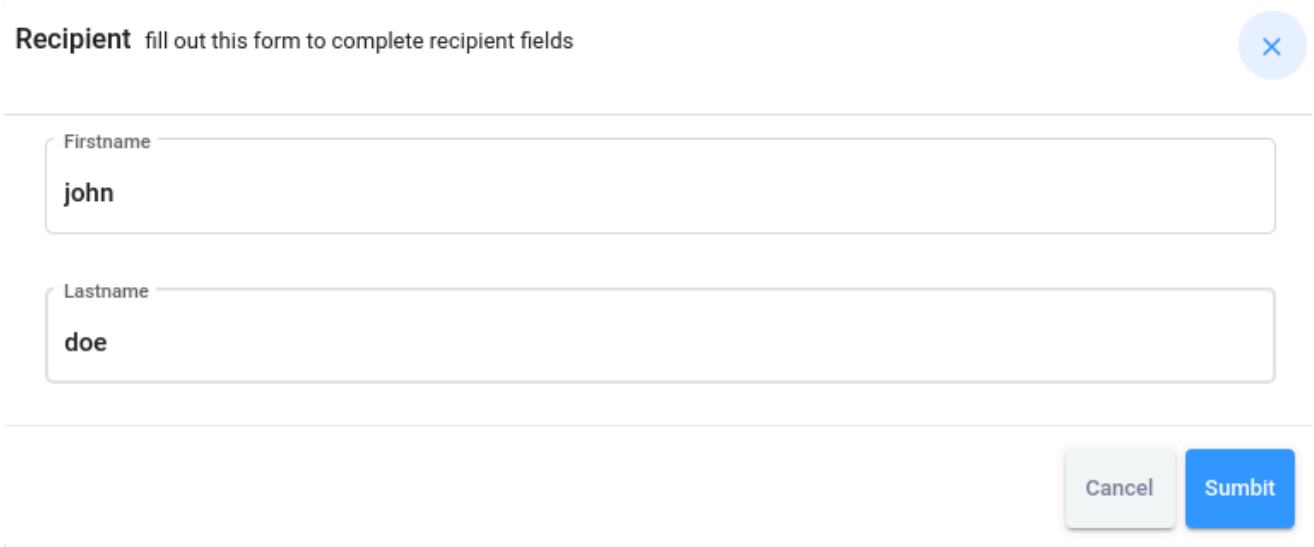

The listing of recipients provides further details on each recipient including the first name, last name, email, phone, date of birth, a list of assigned categories with their status and the actions column which includes the assign ,edit and delete buttons.

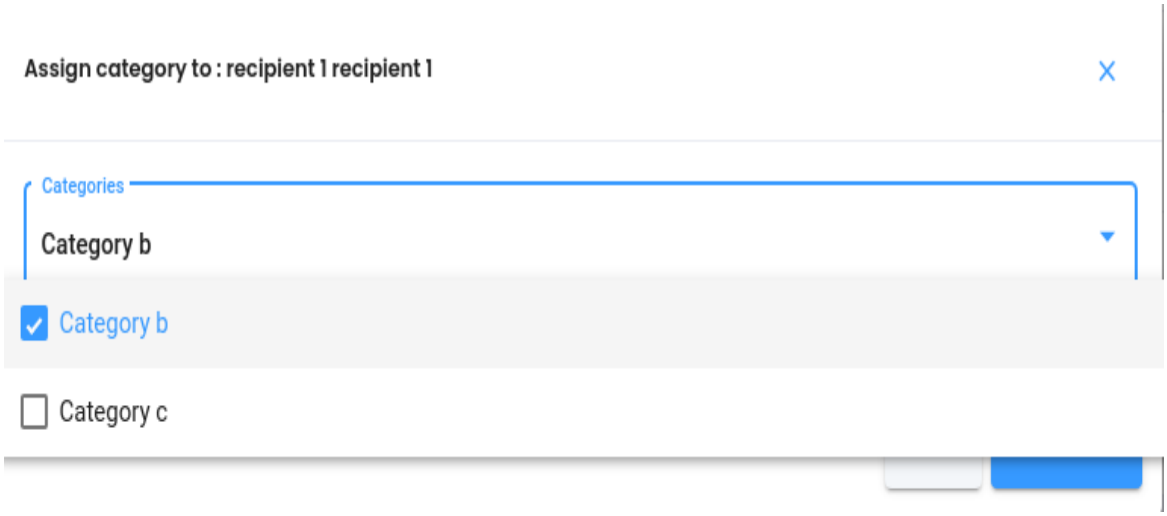

The state of the category depends on the completion of the recipient fields.

The category is active if all the recipient's fields are completed otherwise the category's state will show as pending.

The fields can be completed either by the recipient itself, otherwise the issuer can update the recipients fields to change the state of the account/category :

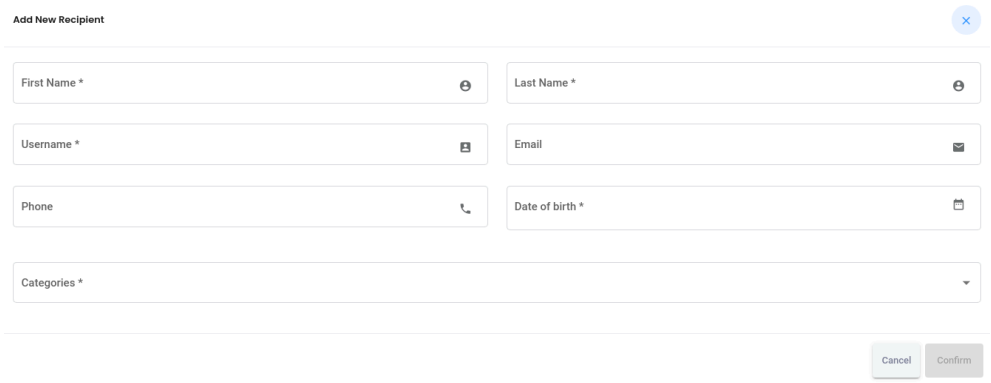

The **assign** button allows the user to add the recipient to a specific category.

- Create new recipient

In this section the issuer can add new recipients to his group, and assign them to one or multiple categories.

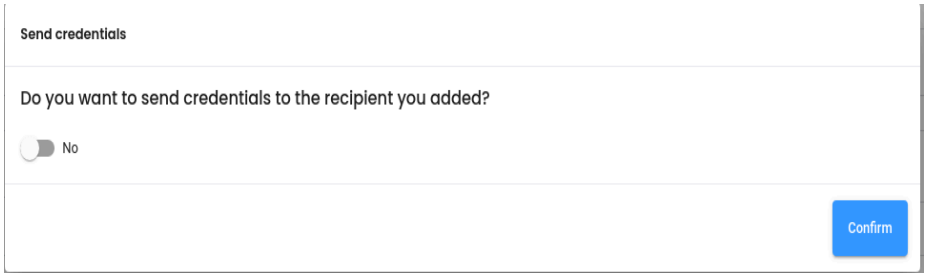

The issuer will be prompted to enter several information including : recipient's personal details (first name, last name, username, email,phone and date of birth), and the category(s).

All the fields are required except for the email and phone , the user can choose to enter either the email or phone alone or both.

The submit button will remain disabled until the user completes all the required fields.

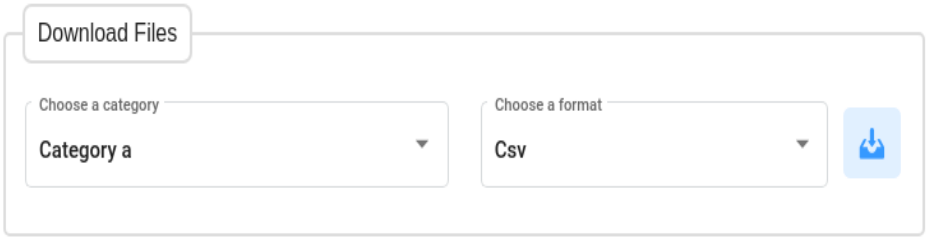

After clicking submit, the issuer will be prompted with a popup where he can choose whether to send credentials to the new recipient or not.

- Upload multiple recipients

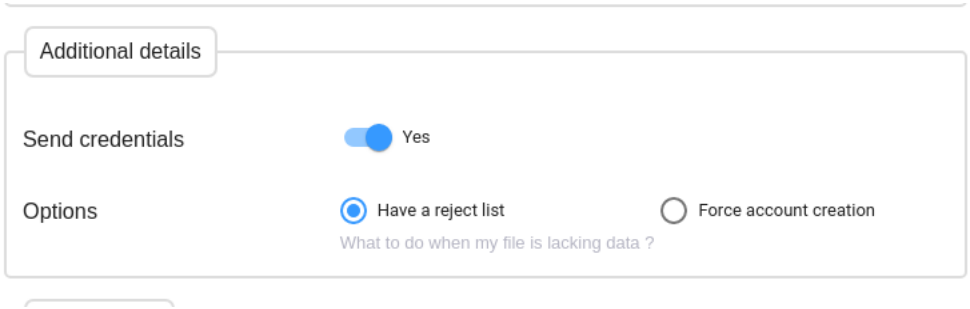

In this section the issuer can upload a list of recipients using a file.

First he has to choose a category and file format, and then download a sample file with the recipient's personal fields and the category fields.

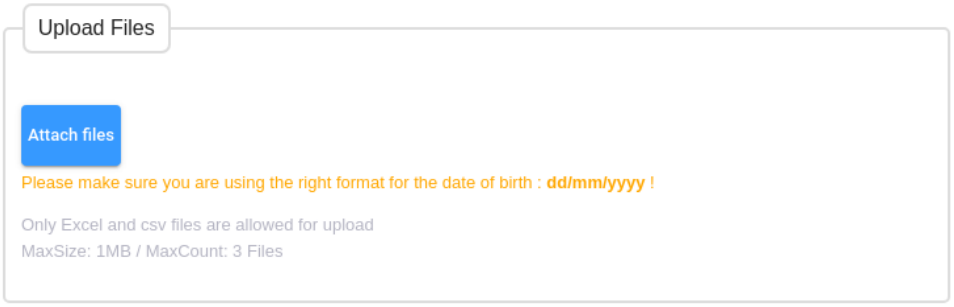

Additional details section:

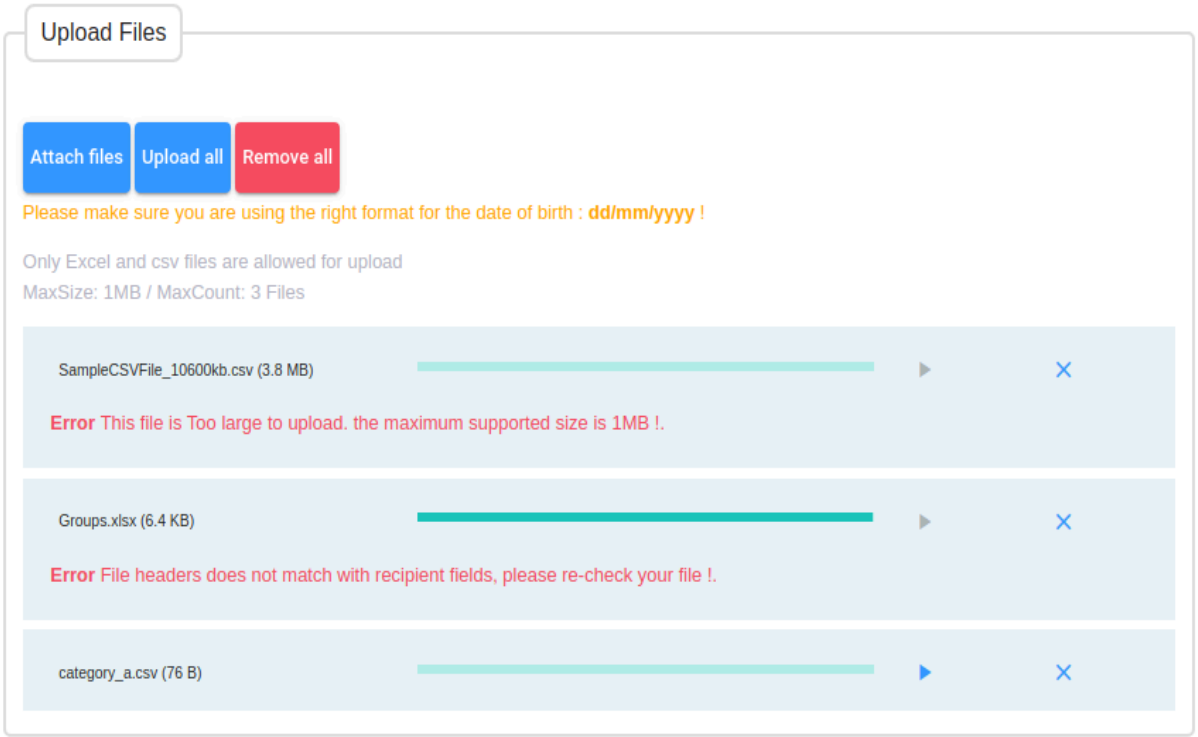

Send credentials: Here the user chooses to send the credentials to the uploaded recipients or not.
Have a reject list : In case of missing information the application will provide a file with the rejected recipients and the rejection reason.
Force account creation : In case of missing data the application will force the account creation and provide a file with the created recipients.

The user has to complete the file with the recipient's information and attach it in order to complete the upload process.

3 is the maximum number of files that can be uploaded at once.
1 Mb is the maximum size that each file must not exceed.
After attaching the files the system will check if the headers of the uploaded file and the headers of the generated file are the same.

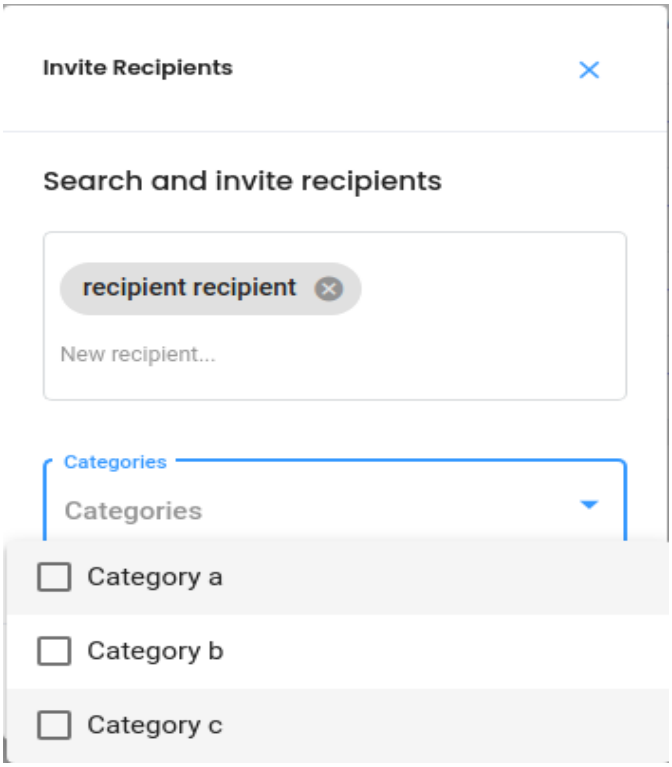

Once the upload of documents is completed, the recipients will be added to the listing.

- Invite recipients

In this section the issuer can send invitations to different recipients to join his group.

The issuer can invite one or more recipients to join a category or multiple categories in his group.

First, the user has to search for the recipients with first name or last name.

Then, he selects the recipients from the displayed list.

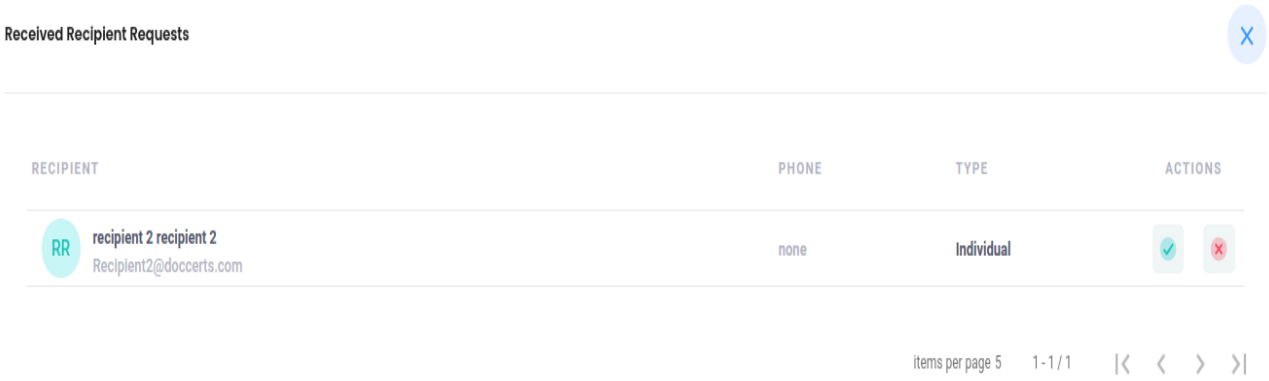

Next, he selects the categories, and then submits the form.

The invitation will remain pending until it gets accepted by the appropriate recipient.

- Manage recipients requests

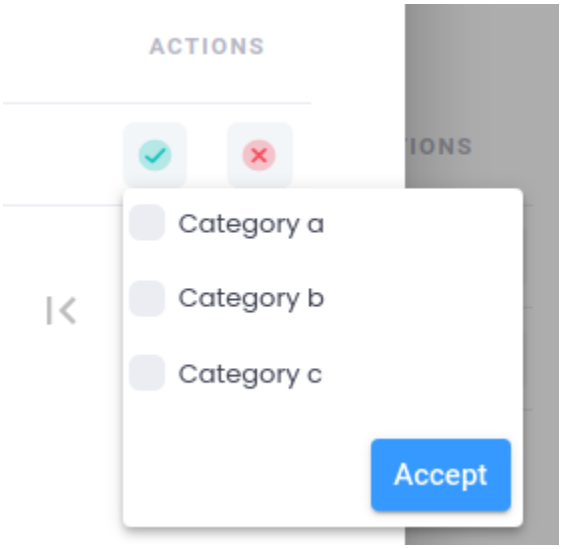

Listing requests: in this section the issuer will find the requests received to join his group with the appropriate recipient's information including recipient details, phone

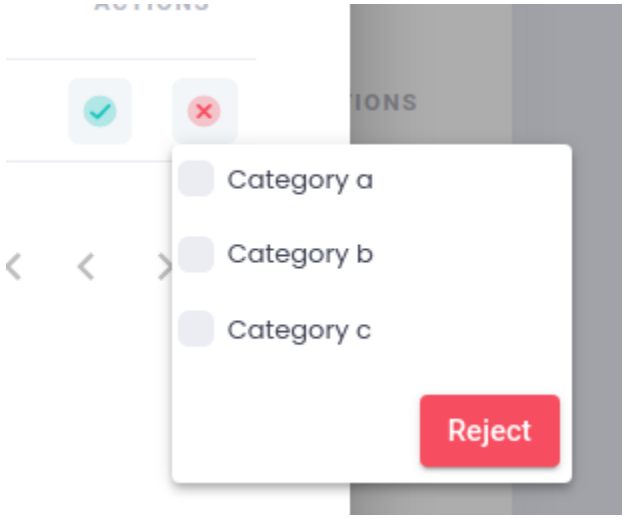

number if available and the account type.

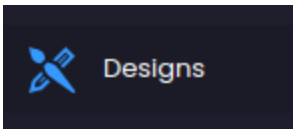

Under actions, the user can either accept or reject the request .

If the request is related to more than one category the issuer can select the category or categories then accept/reject the request.

6. Designs

In this section the user has access to designs listing and management , including creating the design of the certificate layout.

- Listing designs

The listing of designs will provide further details on each design including the name, category's name, if the design is used in a certificate or not, creation date, if it's double sided or not and the actions column which includes duplicate, view , import, edit and delete buttons.

Duplicate design : create new design with the same information (Category and design content).

View design: this allows the issuer to view the final design (Recto and Verso).

Export design: This will allow the user to generate a file with the design that can be used with another account.

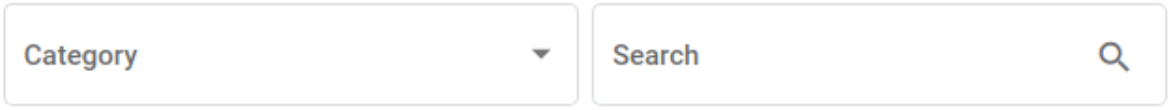

Update design.

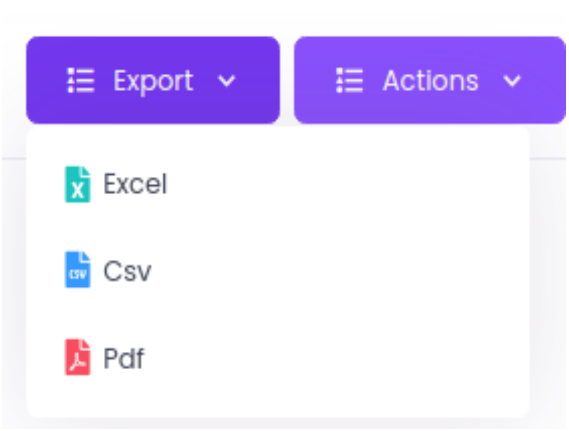

Delete design.

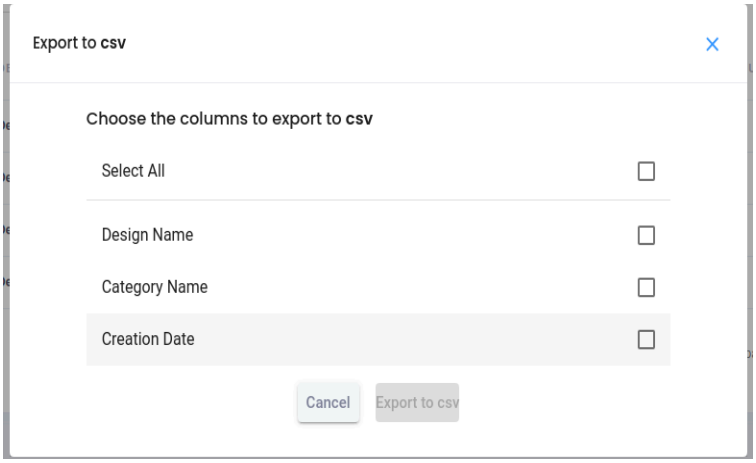

In the listing window the user can always search and/or filter the displayed data, the filter could be applied based on the category.

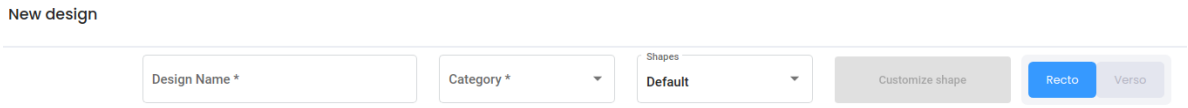

The user can also export the designs' data as an Excel/csv/Pdf file .

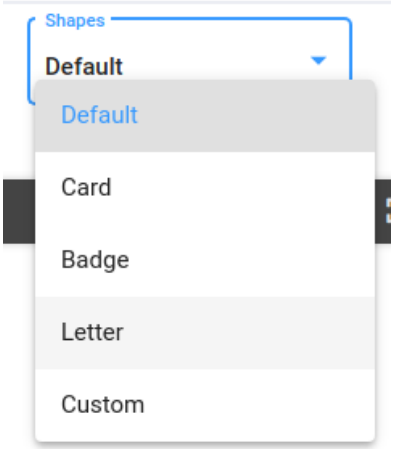

- Create a new design

To create a design the user has to enter the design's name, select a category and select a shape.

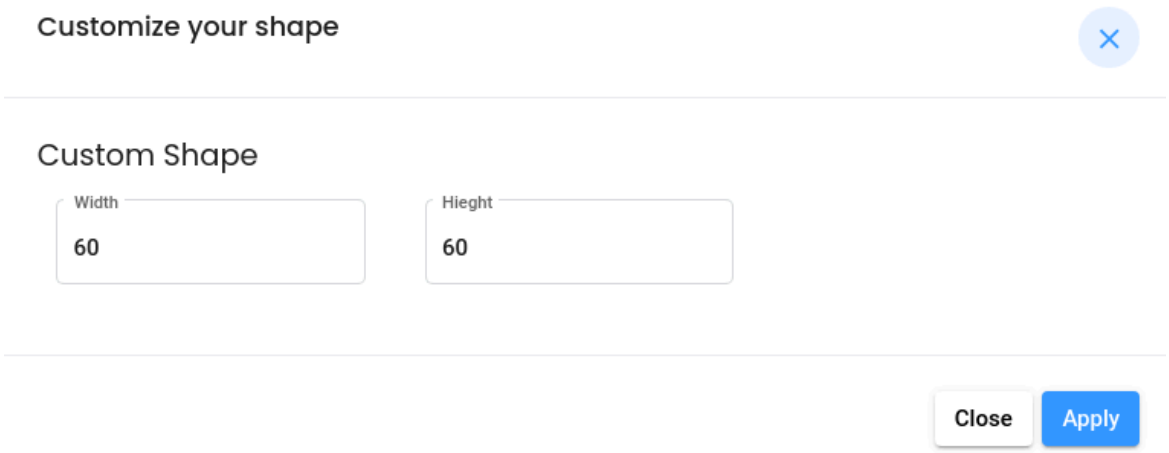

There are five different shapes that the user can choose from:

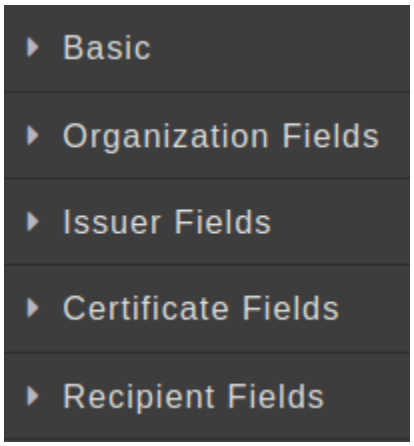

- Default (Width: **1319px**, Height: **742px**)
- Card (Width: **530px**, Height: **336px**)
- Badge (Width : **450px**, Height: **550px**)
- Letter (Width: **900px**, Height: **610px**)

- Custom(width and height are customisable)

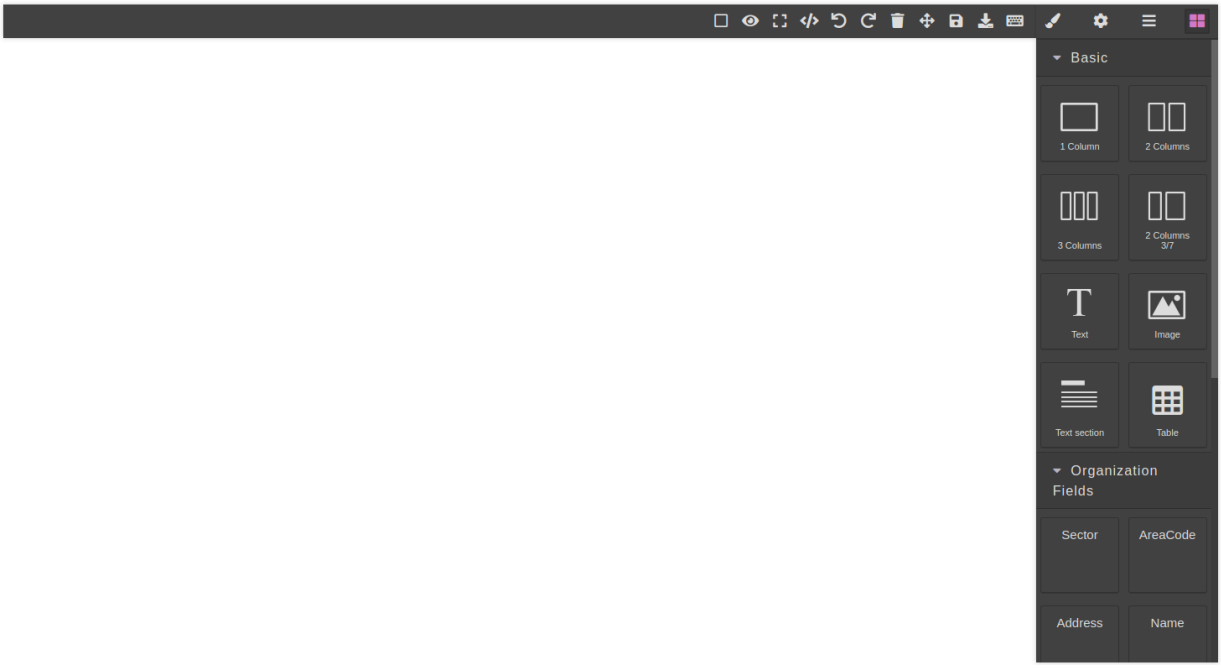

The custom Shape gives the user the ability to define the design's width and height.

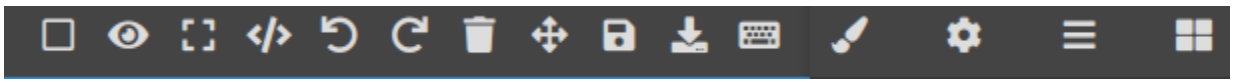

Design editor
This editor is used to create and edit design layout. It contains different sections, and each section has several options.

Basic section: Contains the static elements like image, text ,table …
The other sections are dynamic sections, they include generated elements from the issuer's organization, the issuer or from the chosen category.

The editor includes so many other functionalities as displayed in the header below.

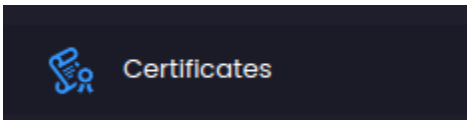

- View sections
- Preview
- Full screen
- View html/css code
- Undo change
- Redo change
- Clear canvas
- Drag and drop mode
- Save design
- Import from html/css
- Open arabic keyBoard
- Open style manager
- Section settings
- Open Layer Manager

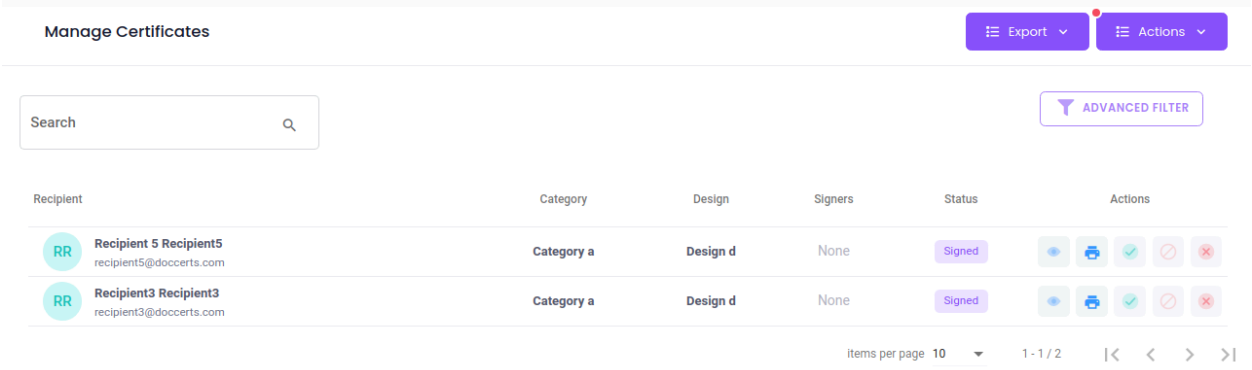

- Open Blocks 

7. Certificates

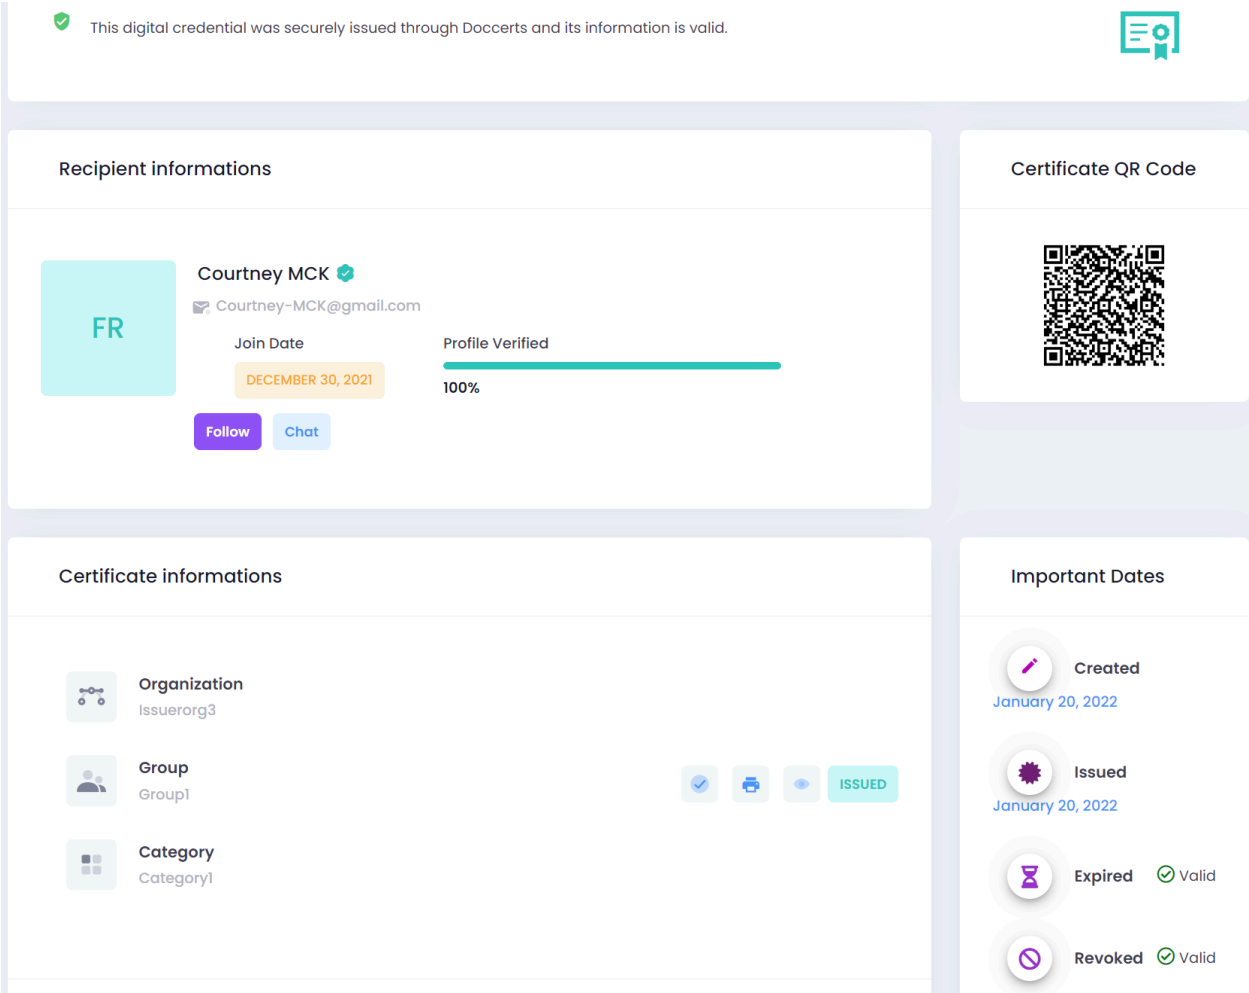

- Listing / manage certificates

The listing certificates page provides further details on each certificate including the recipient information (First name, last name, email), the category name, the design name, the signers, the status (Created, signed, issued, revoked and expired) and the actions column which includes the view, print, verify, revoke and delete certificate.

From the listing, the issuer can view and print the certificate as an image or a pdf file.

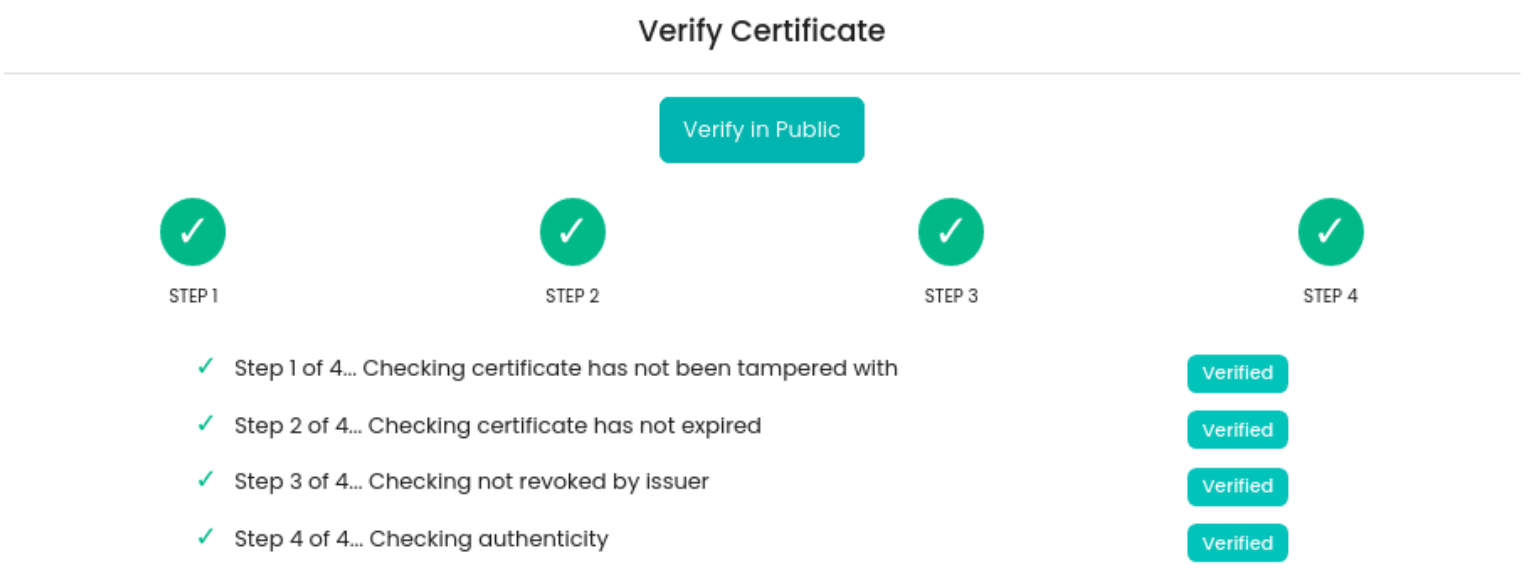

He can also verify the certificate by clicking on the verification button where a new page will provide full details about the selected certificate.

To verify the certificate on the blockChain he needs to click on the verification icon

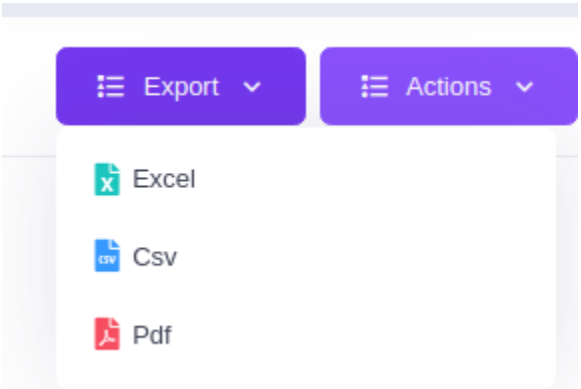

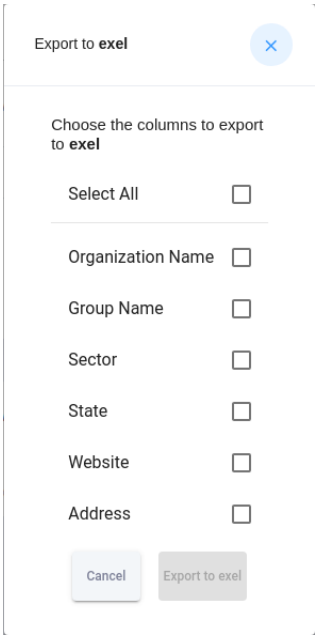

Then the issuer can verify the certificate on private Blockchain, public Blockchain or both depending on the options chosen at the creation/issuance stage.

The issuer can apply a search/filter on the displayed data.

The issuer can also export the list of certificates as an Excel/Csv/Pdf file.

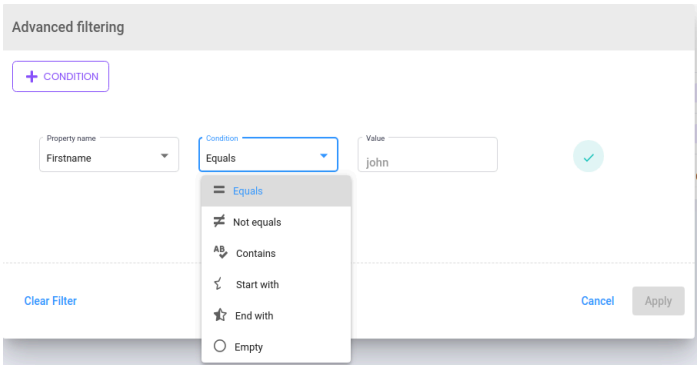

Advanced filter

This section provides advanced filter functionalities using one or multiple certificate fields, and making different queries to filter out the data based on the user requirements.

The advanced filter contains the required field name, the condition (Equals, not equals, empty…) and the value the user is looking for.

The user can add multiple conditions and group them by selecting operators (And, Or).

- Create a new certificate

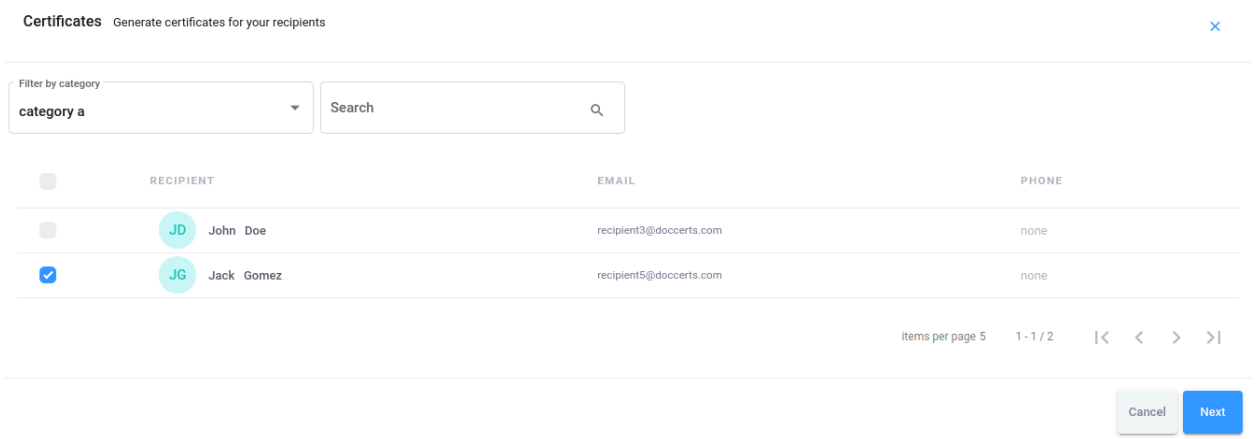

After creating the category, design and adding recipients, the next action is to create the certificate.

The certificate creation process has two steps :

1. Choose the recipient/recipients:

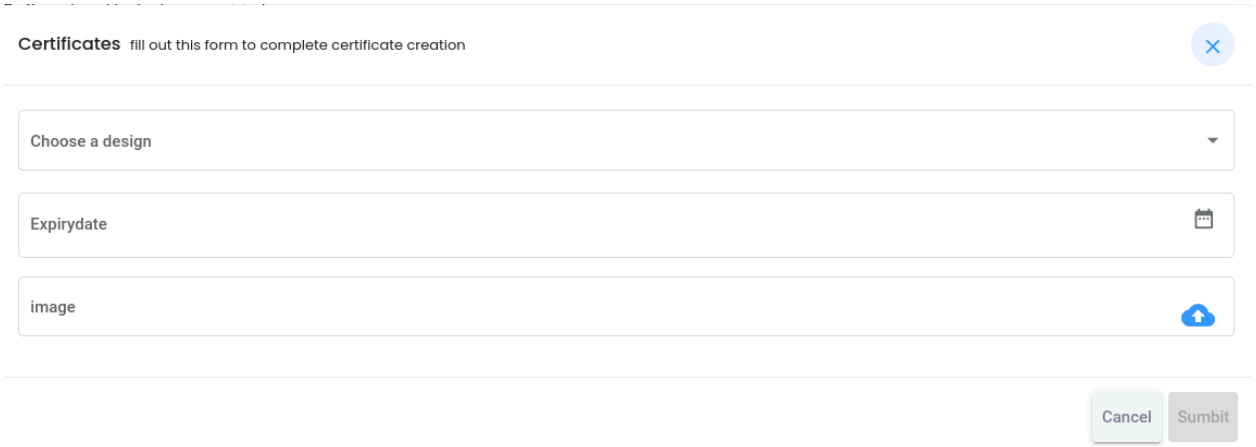

In the step the issuer has to choose the category first, and the application will provide a list of recipients assigned to that category where he can select one or multiple recipients.

2. Select design and complete the certificate category fields

After selecting a category and the recipient(s) it's time to complete the certificate fields as per the chosen category.

This form has the designs list and the certificate field from the category. Each field is displayed according to its type (Text, date, image, number…).

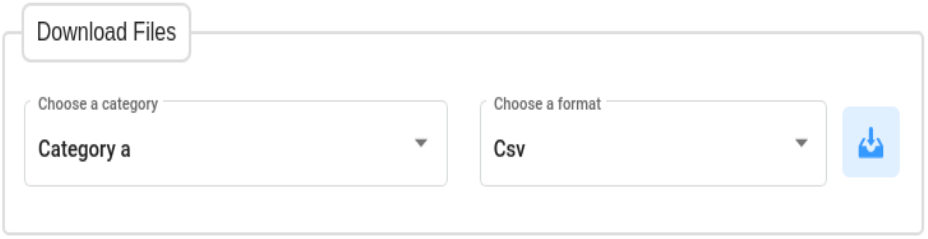

Data validation is enabled to make sure the type of information entered is accurate.

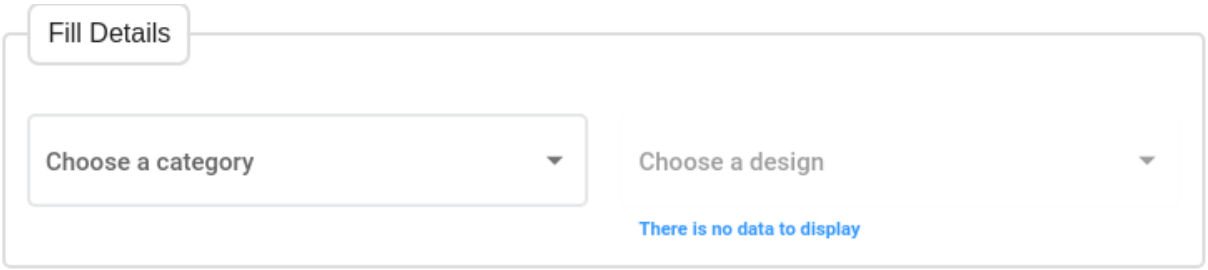

- Upload certificates

In this section the issuer can upload a list of certificates as a file.

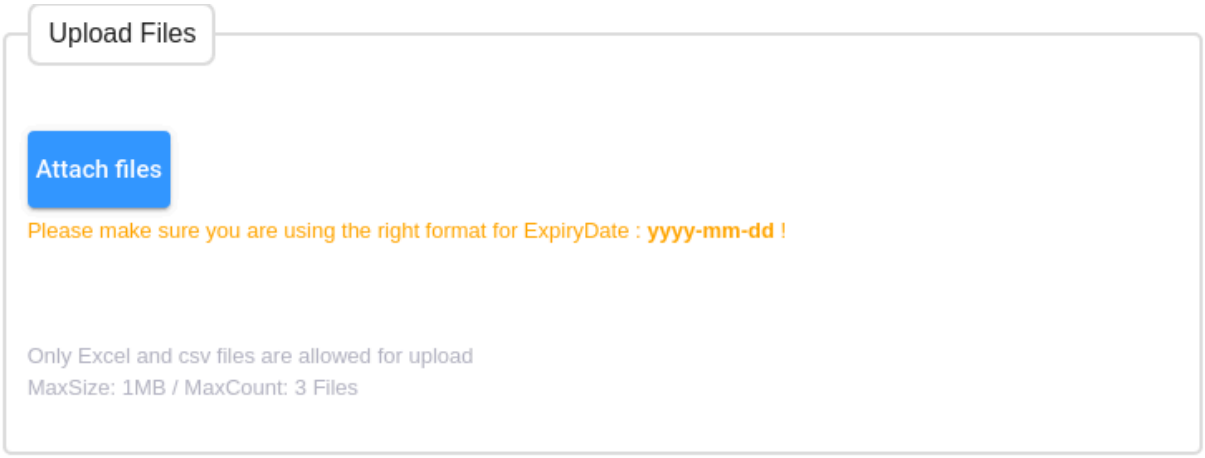

First he has to choose a category and file format, and then download a sample file with a list of recipients belonging to that category and the certificate category fields.

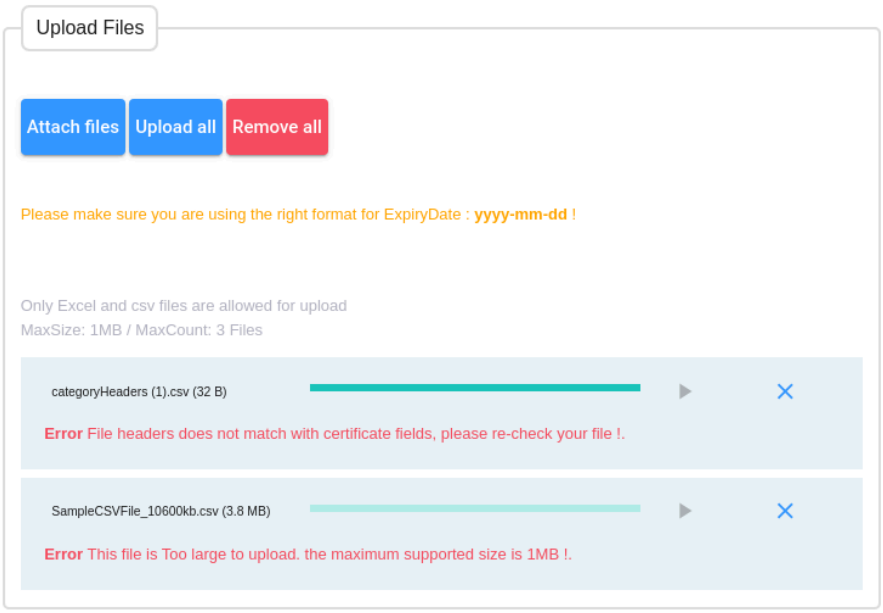

Once the file is completed, he has to select the category, the system will provide the list of designs attached to the selected category.

The user has to attach the file in order to complete the upload process.

3 is the maximum number of files that can be uploaded at once.
1 Mb is the maximum size that each file must not exceed.
After attaching the files the system will check if the headers of the uploaded file and the headers of the generated file are the same.

Once the upload of documents is completed, the certificates will be added to the listing and should be ready to be signed or issued.

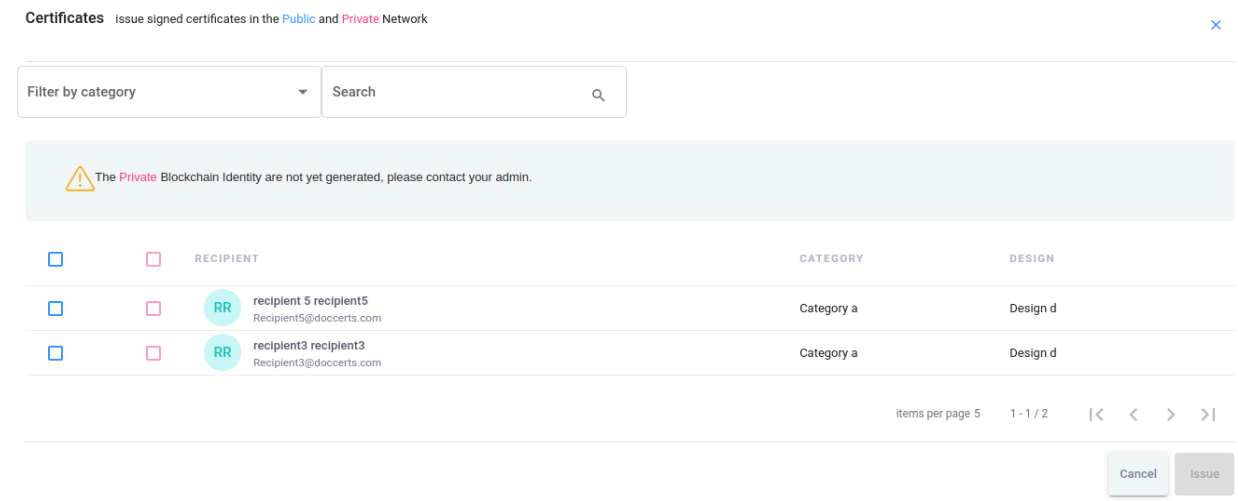

- Issue certificates 

Now onto one of the most important features of the application, which is the issuance of the certificate using **blockchain technology.**

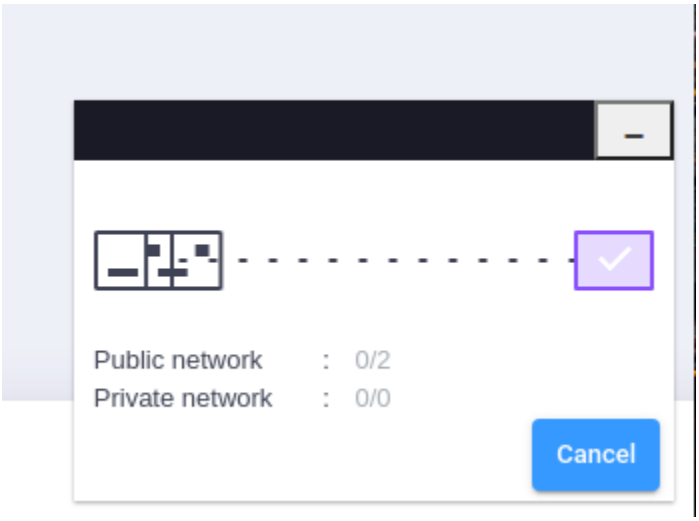

Blockchain: is a technology that allows the storage and transmission of information in a transparent, secure manner. It's like a database that contains the history of all exchanges between its users since its creation.

The certificate issuance can be done on the private Blockchain, the public Blockchain or both.

The issuer will not be able to issue certificates until the issuer's organization he belongs to generates the blockchain identities (Public and/or private), in this case a warning message will be shown.

This window will provide a list of certificates ready to be issued, certificates from a category that has one or multiple signers will not show here until the signers have approved them.
The issuer can apply search and/or filter on the displayed data. He can choose to issue the selected certificates in either public or private blockchain networks or both.

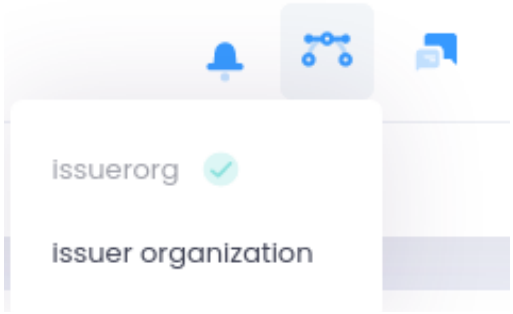

This step could take some time so the issuer can keep on browsing the application, while the certificate(s) issuance is processed in the background using DocCerts powerful queuing system.

8. Organizations

The issuer can belong to multiple organizations, he can switch between organizations using the switch organization button on his portal's header.

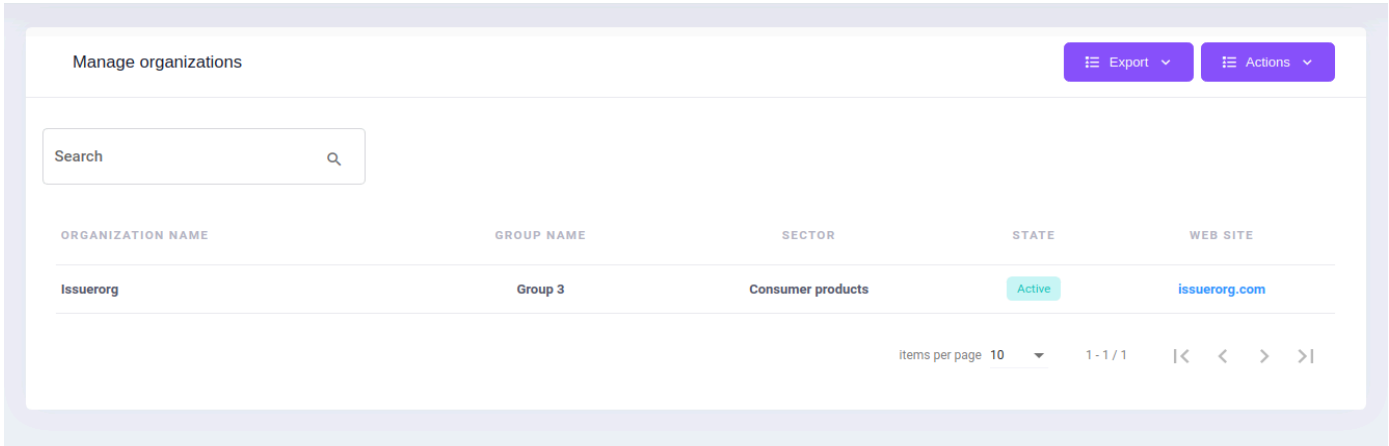

By clicking on the switch button, the issuer will be provided with a dropdown list with the organizations he belongs to. A checkmark will show after the current organisation he is connected to.

- Listing organizations

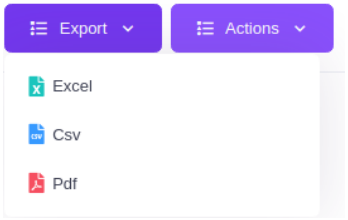

This section will provide the list of all the organizations that the issuer belongs to. This list includes all the details about each organization such as the organization name, group name, sector, the state of the affiliation to that organisation (Pending, Active, Blocked) and the organization website.

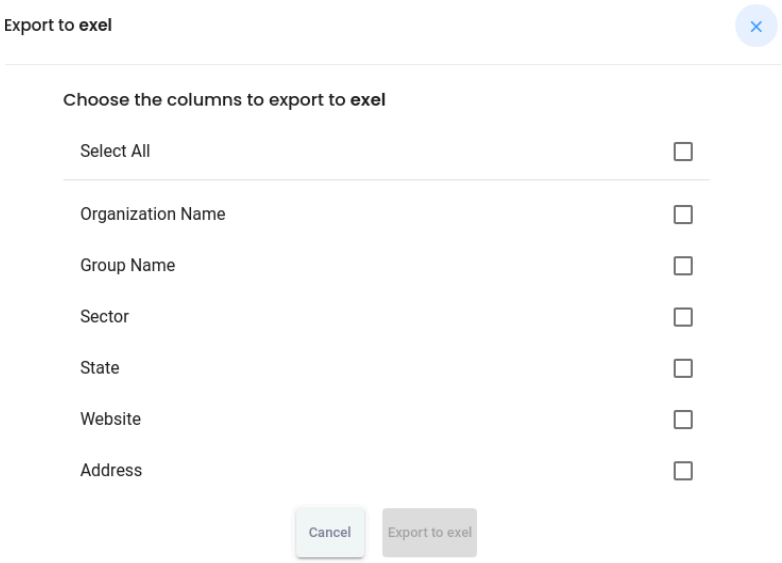

The user can always apply a search on the displayed data.

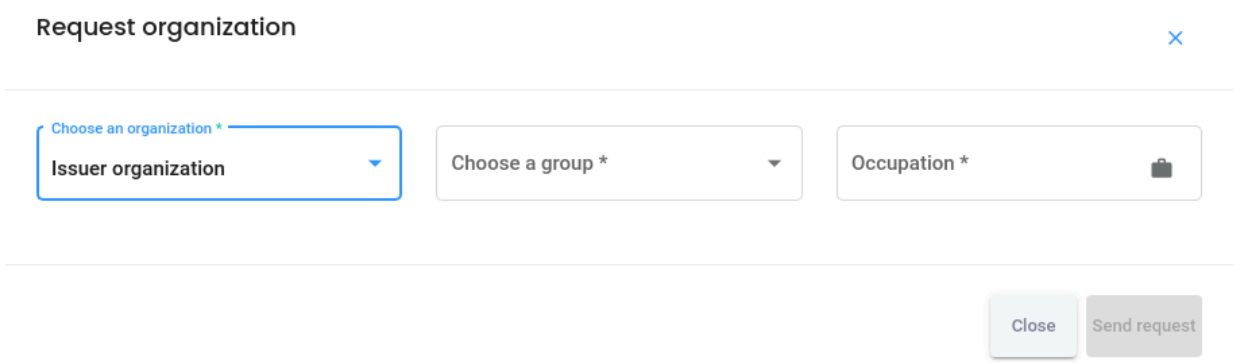

The issuer can also export the list of organizations as an Excel/Csv/Pdf file.

- Request organization

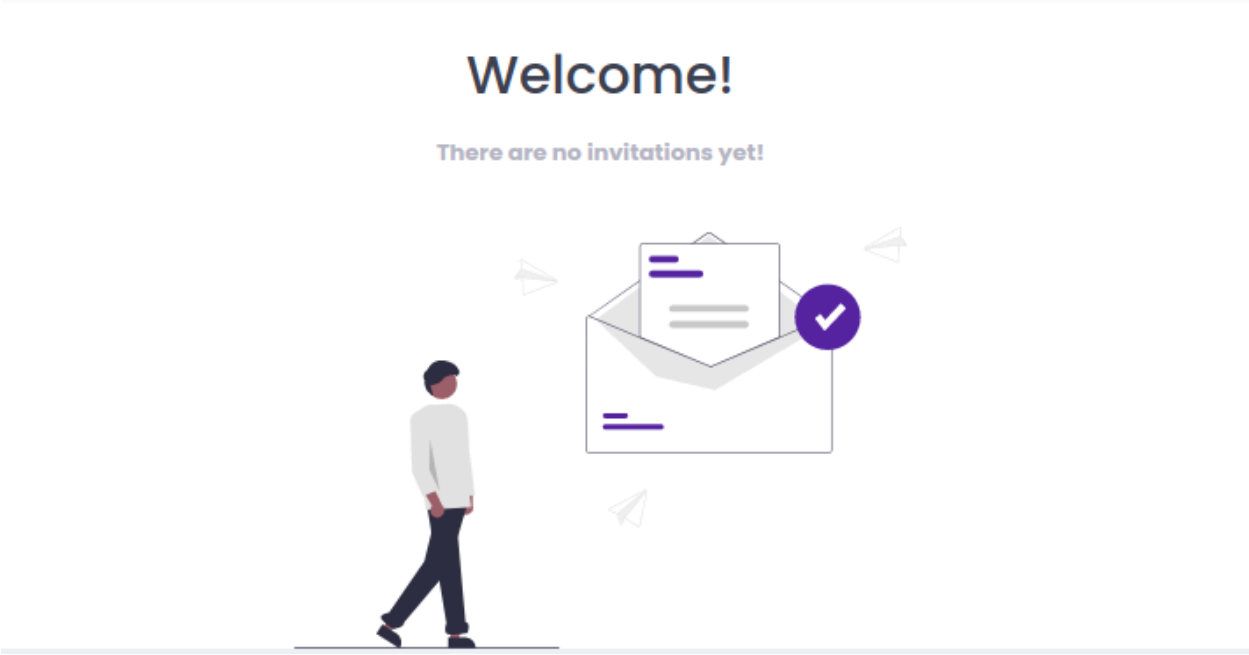

In This section the issuer can send requests to different organizations to join one of their groups. The request form includes the list of organizations available, the groups attached to each organisation and the occupation chosen by the issuer.

All these fields are required.

The request status will remain pending until it gets accepted by the administrator of the organization.

9. Invitations

In this section the issuer can view the invitations he received from different issuer organisations.

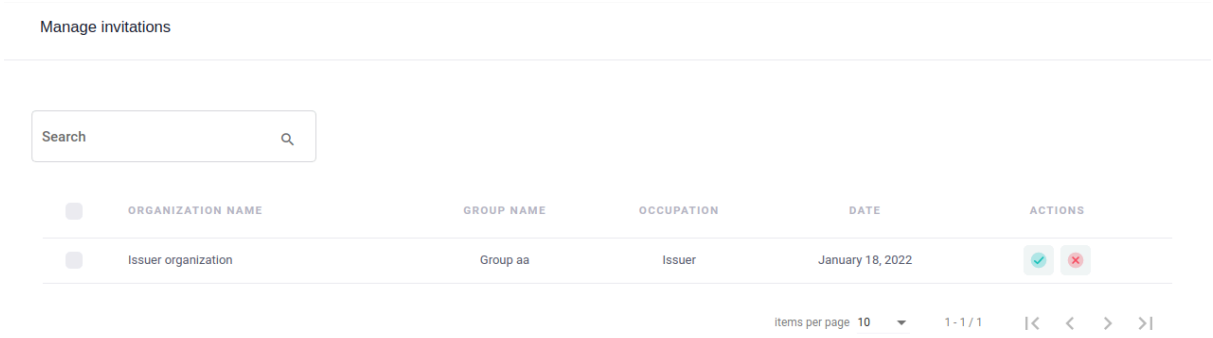

Manage invitations:

This window will provide further information about the invitation such as : Organization’s name, group’s name, occupation, date as well as the actions column.

The issuer can either accept or  reject an organization’s invitation.

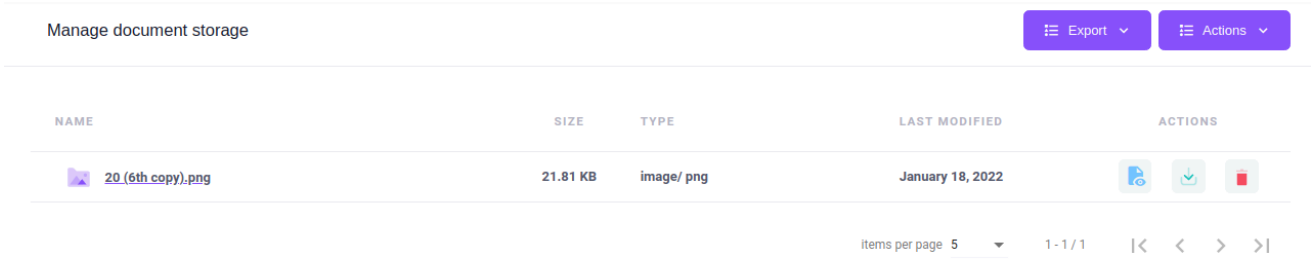

The issuer can always apply search on the displayed data.

10. Document storage

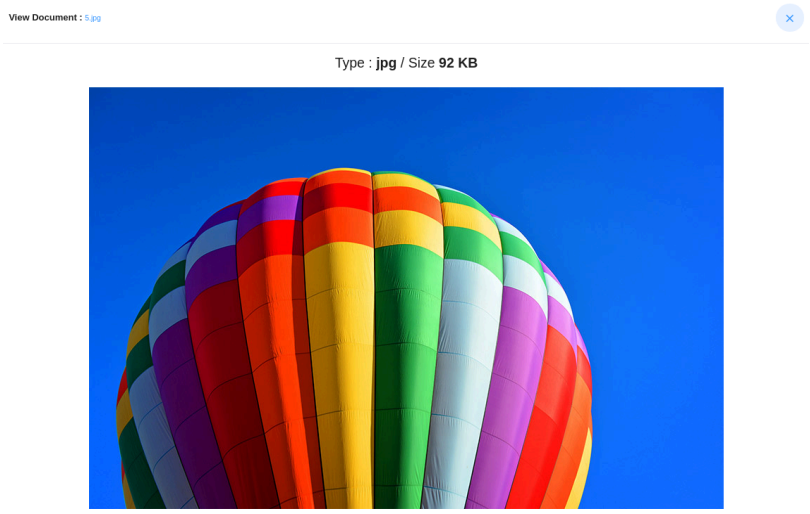

In this section the issuer can manage all the uploaded documents/images, these documents can be used for users profile pictures, certificate category fields and recipients fields.

- Listing documents

This section provides details about the documents such as: document's name, size, type, last modification date and the actions column which allows the user to view, download and delete the document.

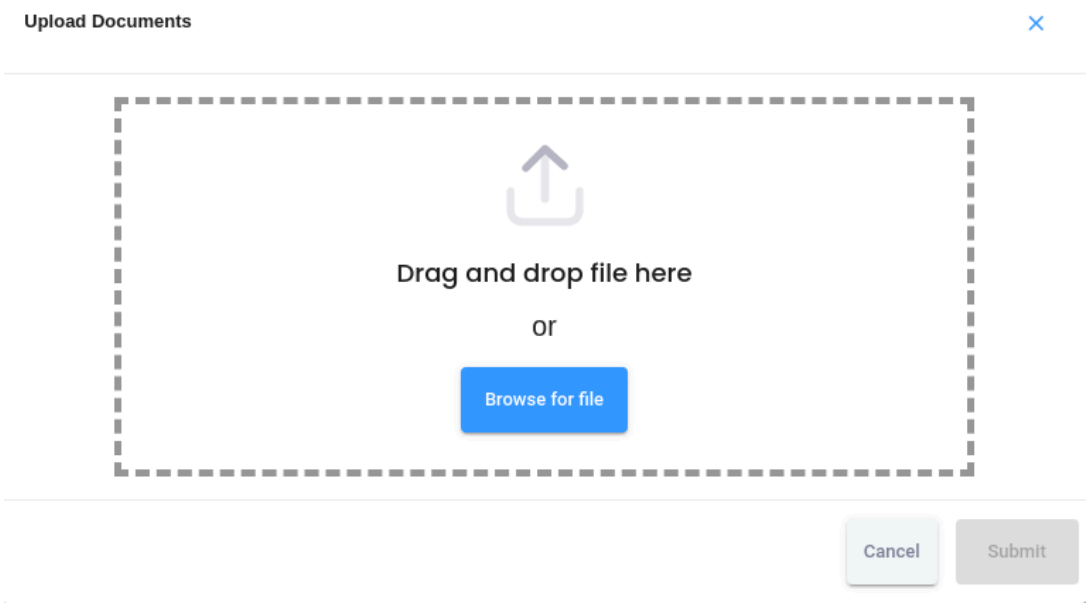

To view the document the issuer can display the document's content either by clicking on the view button in the actions columns or by clicking on the document's name to open the file in a new tab.

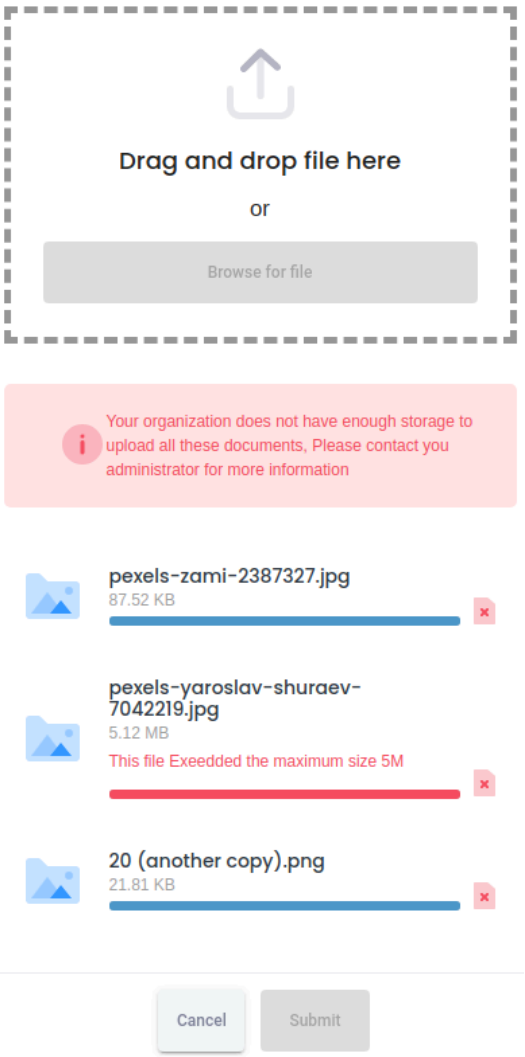

- upload document(s) 

To upload new documents, the user has to use the “Upload document” button in the actions drop down.

A new popup page will be shown, where the user will be prompted to drag and drop or browse for the files, the user can upload one or multiple files at once.

The user can upload one or multiple documents.

This feature only supports images (png/jpg/jpeg).

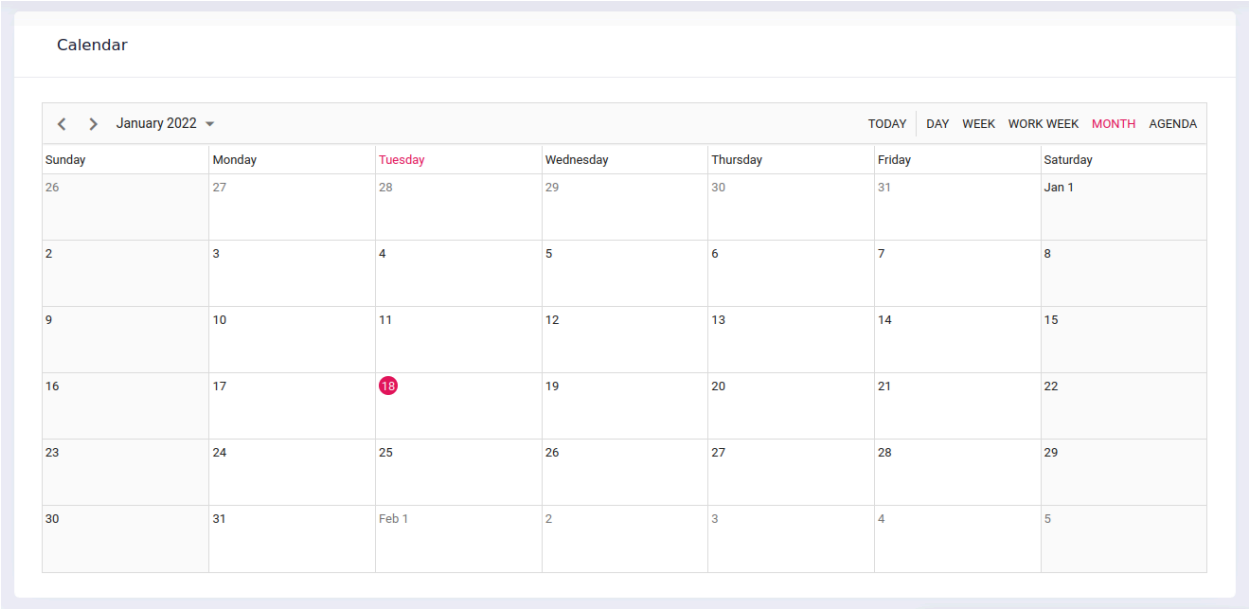

5MB is the maximum size that the file must not exceed.

The upload section takes into consideration the organization's storage, so the size of the file(s) should not exceed the organization's storage as per the pack purchased, otherwise the issuer will not be able to upload the selected documents.

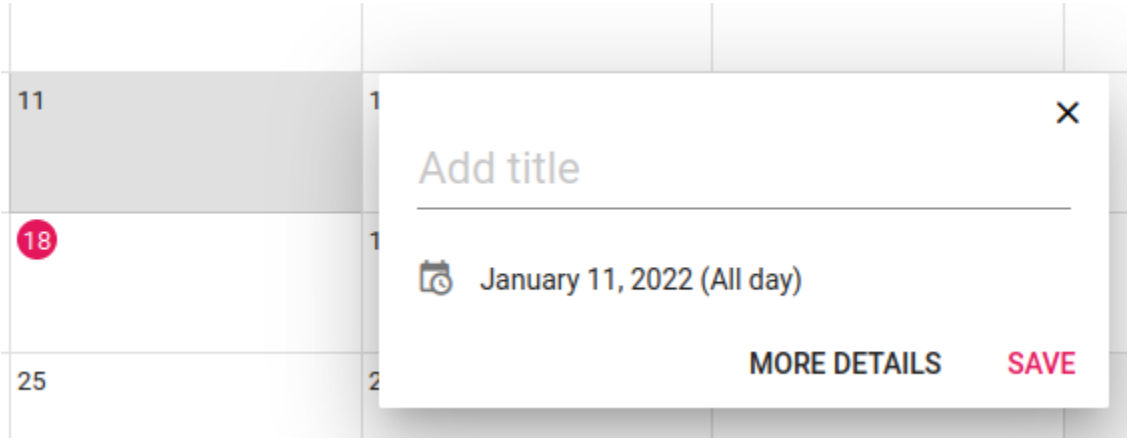

The submit button will remain disabled until all of these conditions are met.

11. Calendar

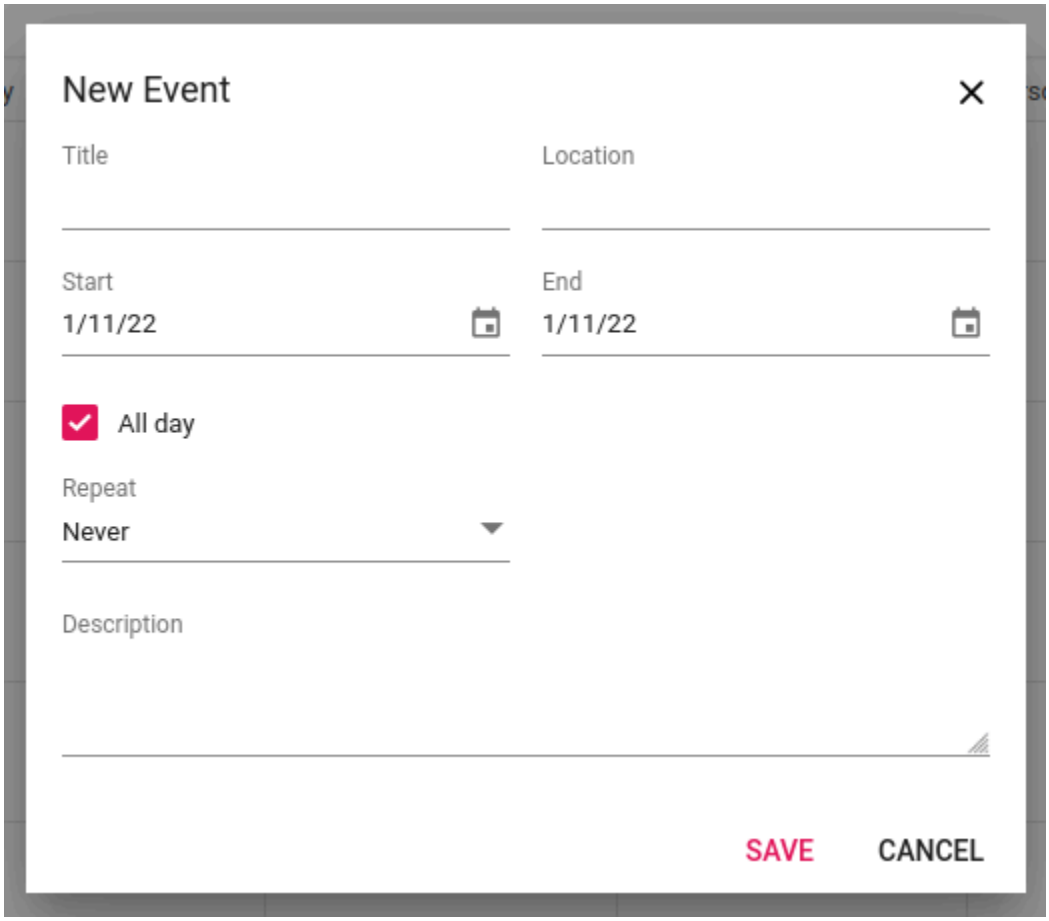

The calendar's main functionality is to help the issuer plan, schedule and keep track of any important events coming up.

To create an event, the user can click on the desired date and a pop up will show, then he can add the title of the event and save it.

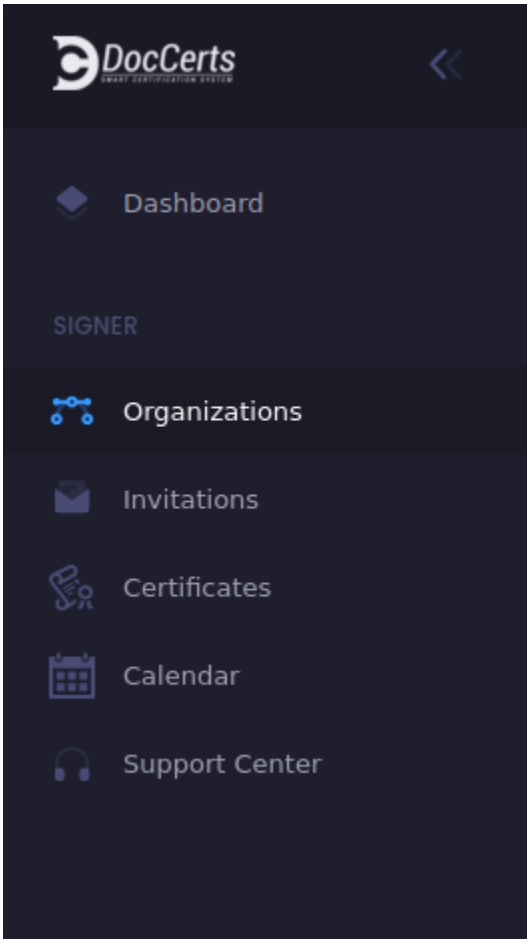

If the user wants to add more details to the event he can click on the “More details” button and provide additional information such as a description, location and recurrence of the event.

Signer

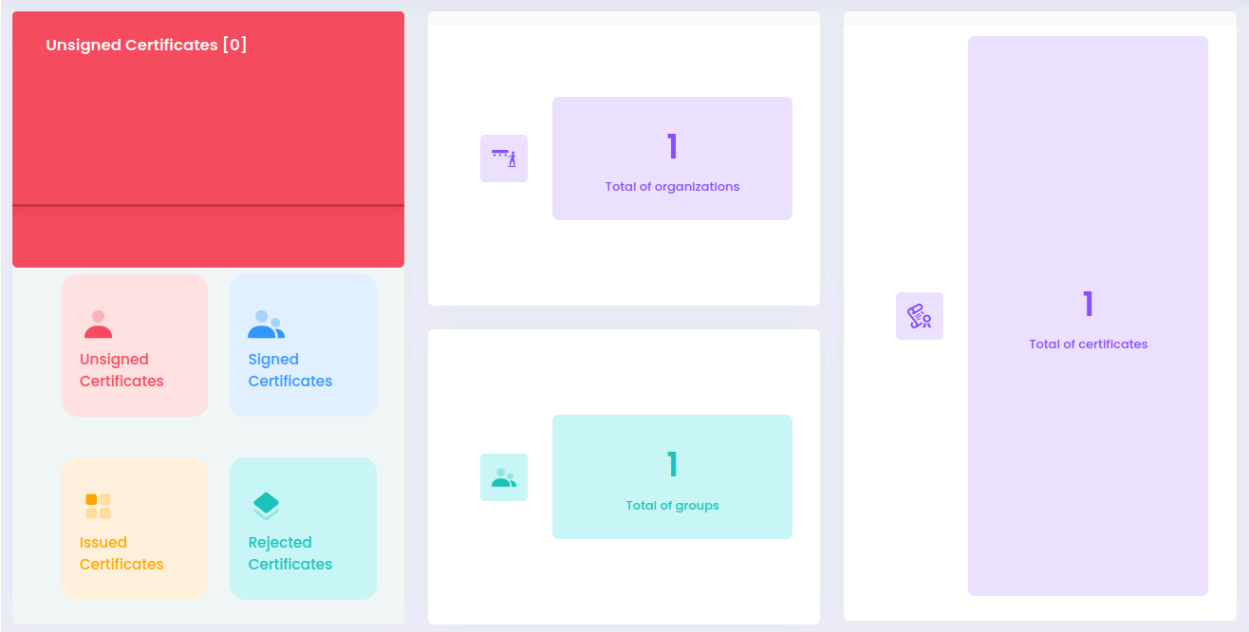

A signer is a member of the actual institution. You can look at him as a jury who decides if a candidate masters a set of skills and qualifications, or not.

The signer has access to multiple features as shown in the sidebar below:

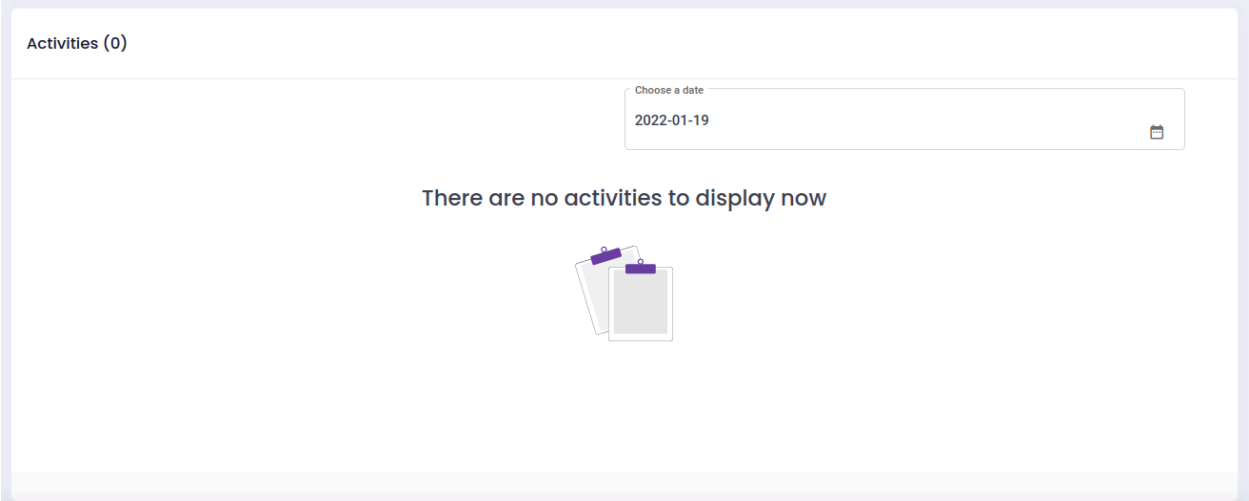

1. Dashboard

Once logged in, the signer will see a comprehensive dashboard providing information on different aspects of the application, for instance number of Signed,unsigned, issued and rejected certificates as well as the total of organizations and groups where the signer is enrolled in, the total of certificates is also displayed in the signer dashboard.

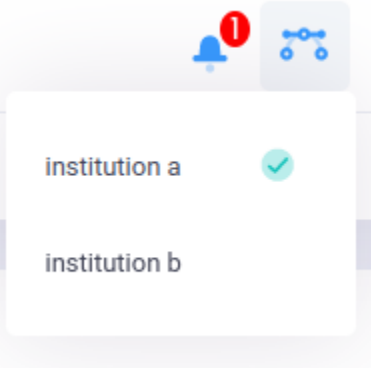

In the bottom section of the dashboard the signer can also see his most recent performed activities.

2. Organizations

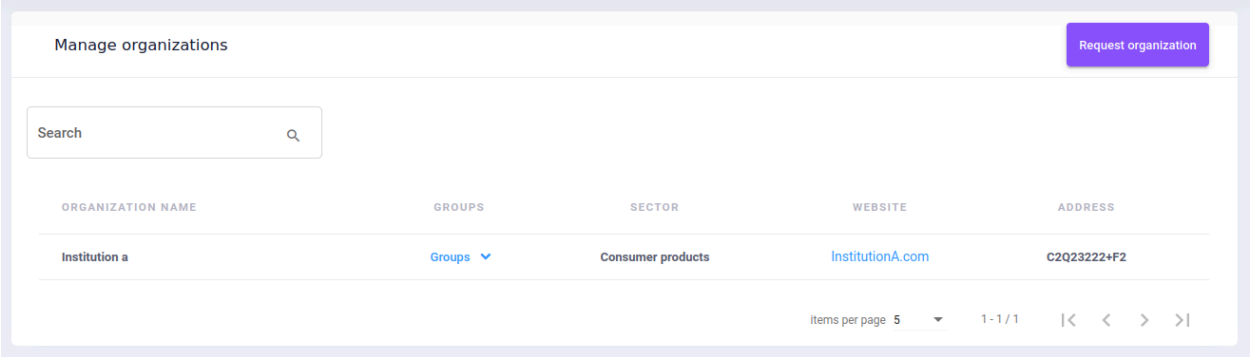

The signer can belong to multiple organizations, he can switch between organizations using the switch organization button on the pages header.

By clicking on the organization icon the signer will be provided with a drop down menu that shows all the organizations that he belongs to and he can switch between them simply by clicking the desired organization name.

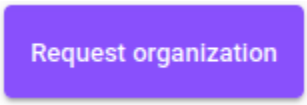

This section will provide the list of all the organizations that the current signer belongs to. Which includes all the details about each organization and the affiliations like organization's name, group’s name, sector, and the organization's website.

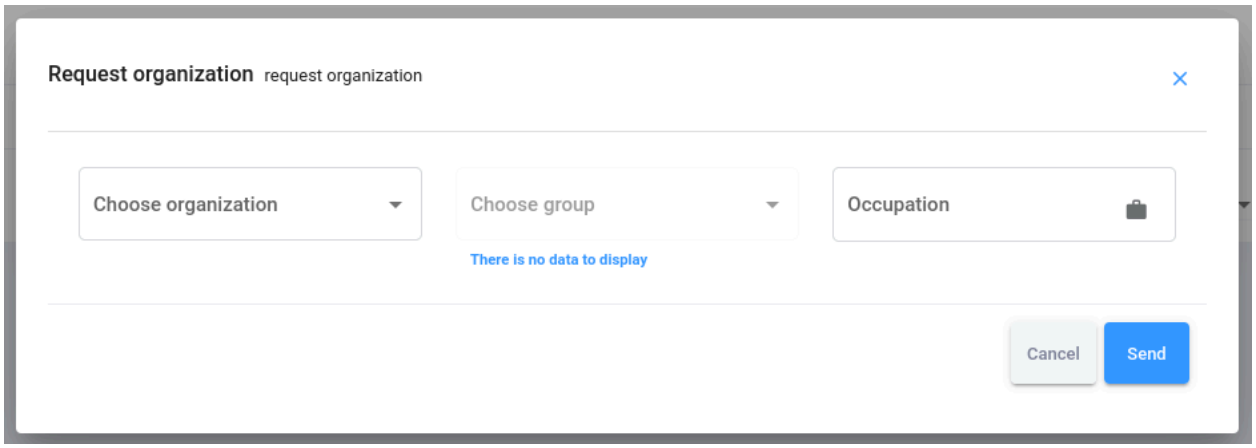

In the Listing window the user can always search an existing organization.

- Request organization

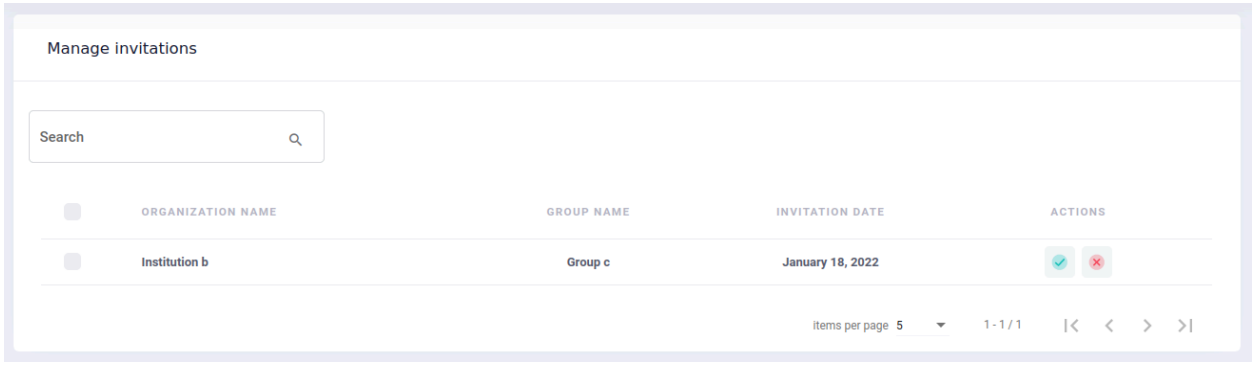

In this section the signer can send requests to different organizations to join one of their groups. The request contains the organization,the group and the occupation.

The request contains the organization,the group and the occupation.
All these fields are required.
The request will remain pending until it gets accepted by the admin of the organization.

3. Invitations

In this section the signer can view the received invitations from different issuer's institutions.

Manage invitations:

This window will provide further information about the invite: organization’s name, group’s name, occupation, date as well as the actions columns.

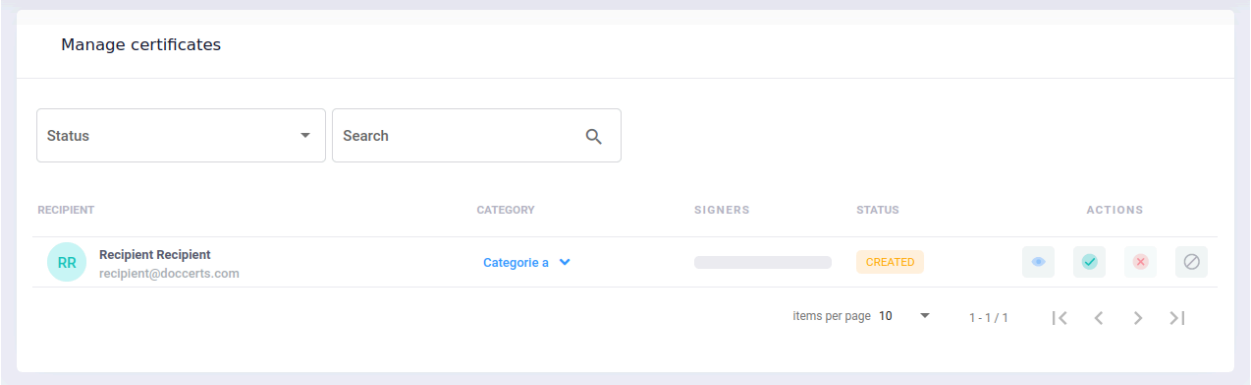

The signer can either accept or  reject an organization’s invite.

The signer can always apply search on the displayed data.

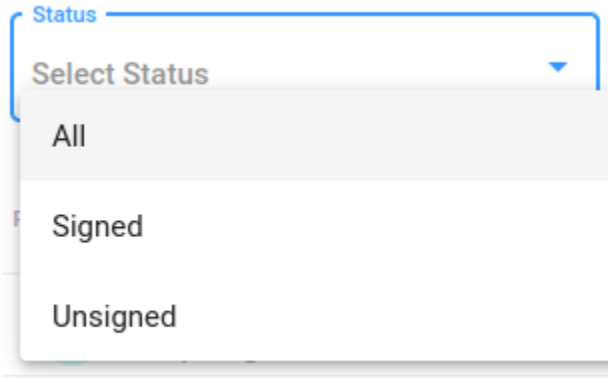

4. Certificates

- Listing/Manage certificates

Listing certificates page provides further details on each certificate including the Recipient information(first name, last name, email),the category name, the signers, the status(signed,unsigned) and the actions column which includes the view, sign , unsign and reject certificates.

The signer can filter the certificates by status:

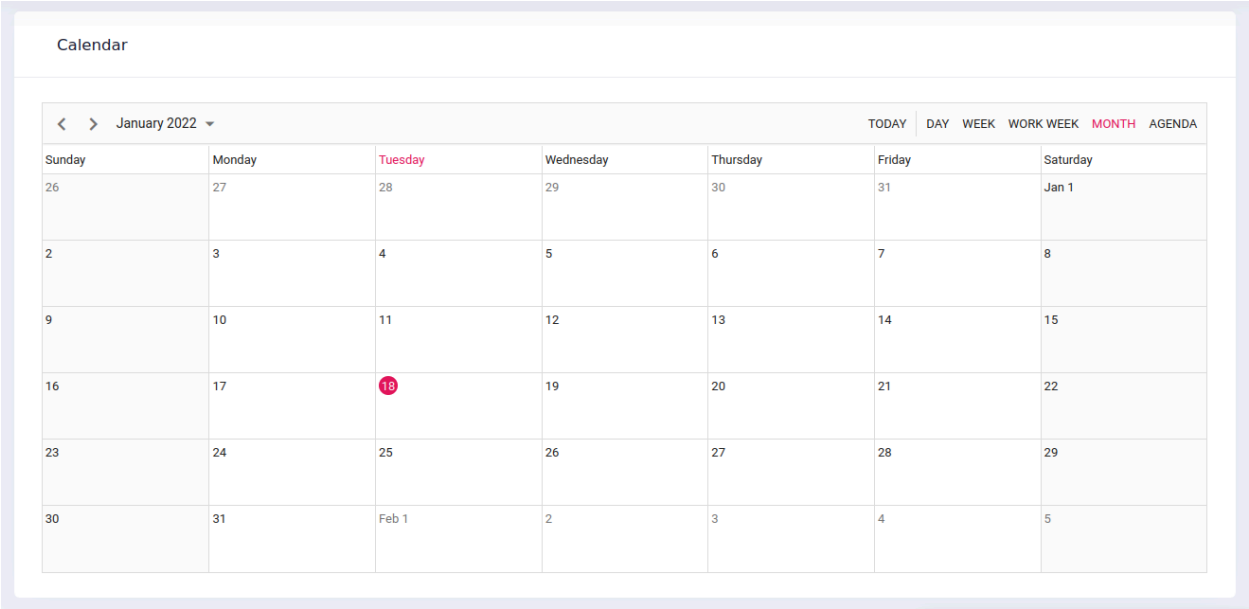

He can also apply a search on the displayed data:

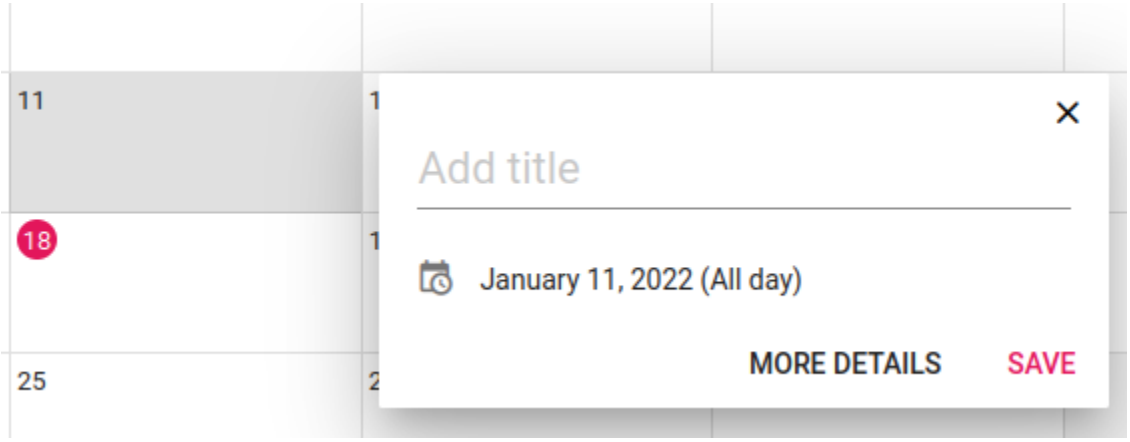

5. Calendar

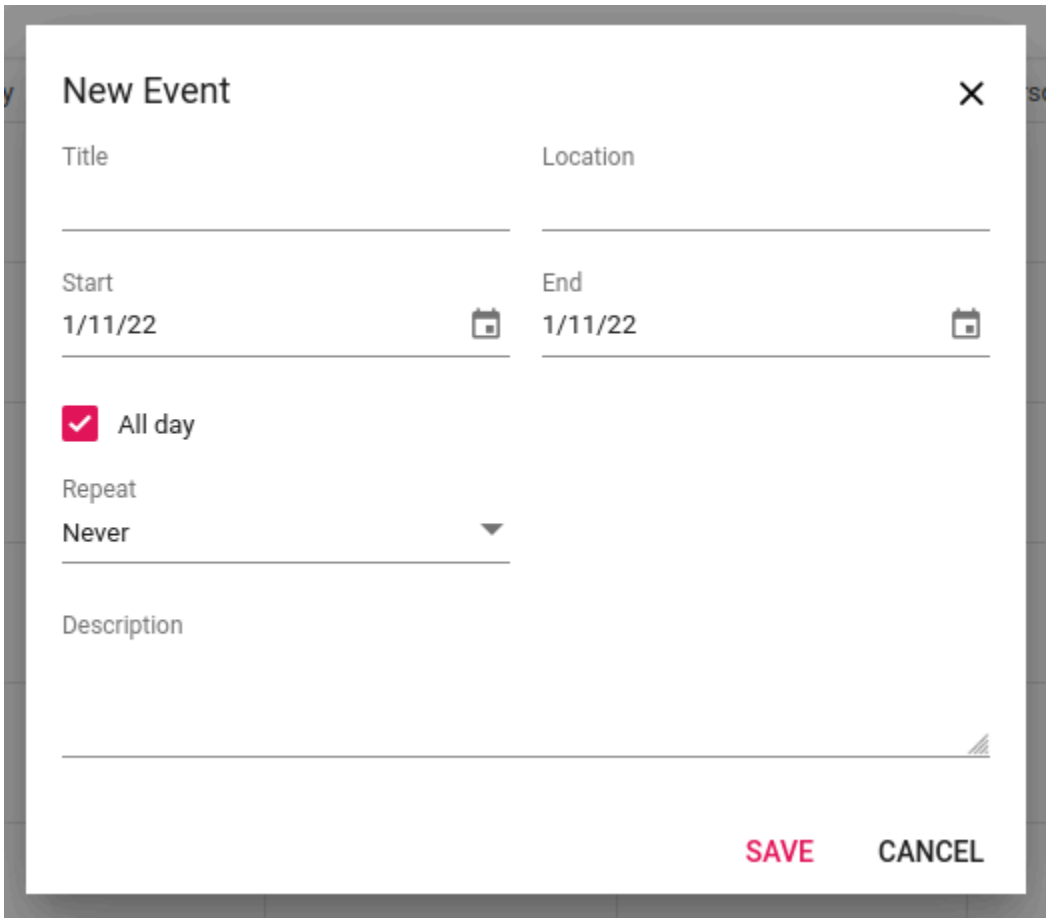

The calendar's main function is for you to plan your schedule and note any important events coming up.

To create an event, click on the desired date and a pop up will show, then you can add the title of your event and save it.

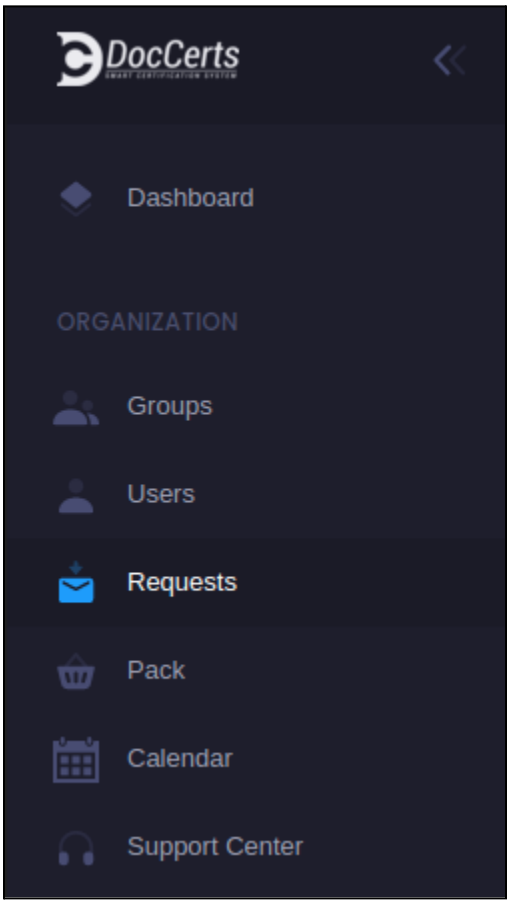

If you want to add more details to your event you can choose to click on the more details button and add a description, location ..

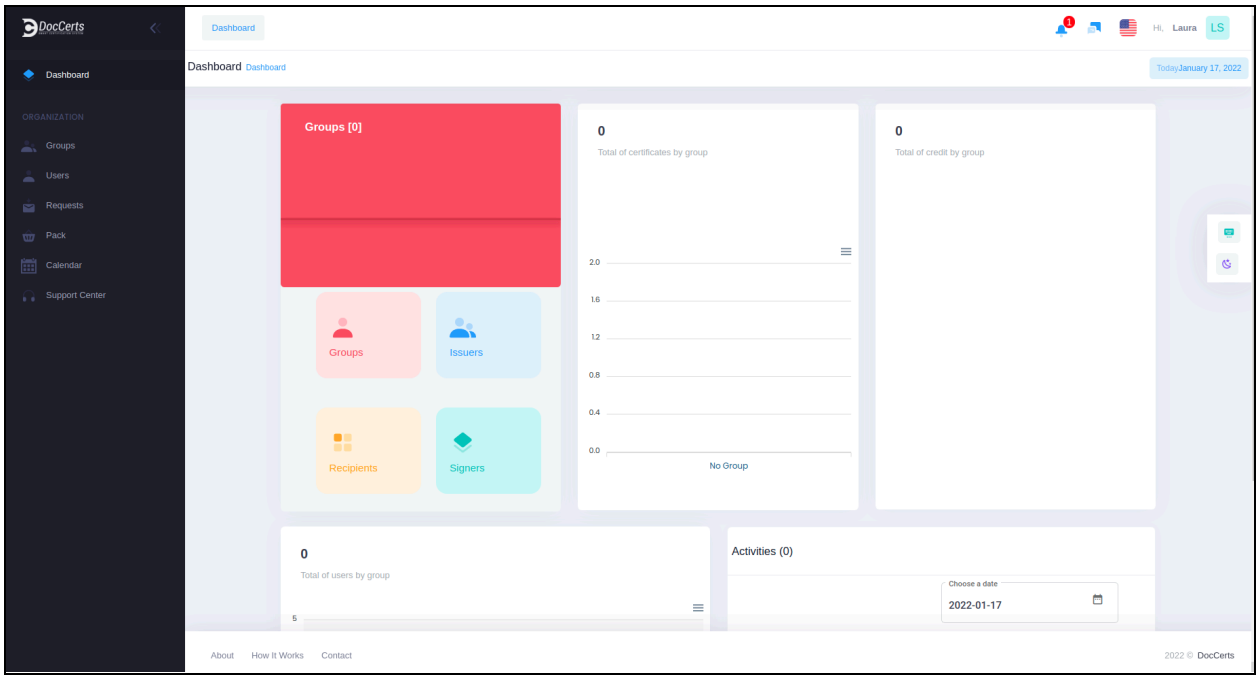

Issuer organization

Issuer organization is an institution comprising one or more issuers, the main role of this organization is issuers management. For example : create groups for issuers, add or invite new users, accept/reject requests, etc.

1. Getting started

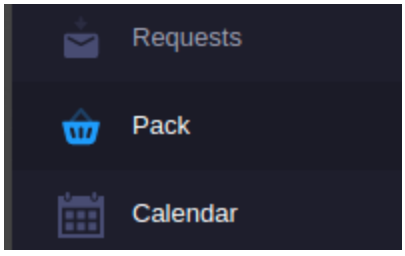

Once logged in, the user will see a comprehensive dashboard providing information on different aspects of the application, for instance number of groups, issuers, recipients, categories and signers, also the total of certificates, credit and users by group.

In the bottom section of the dashboard the user can also see his recent activities by date.

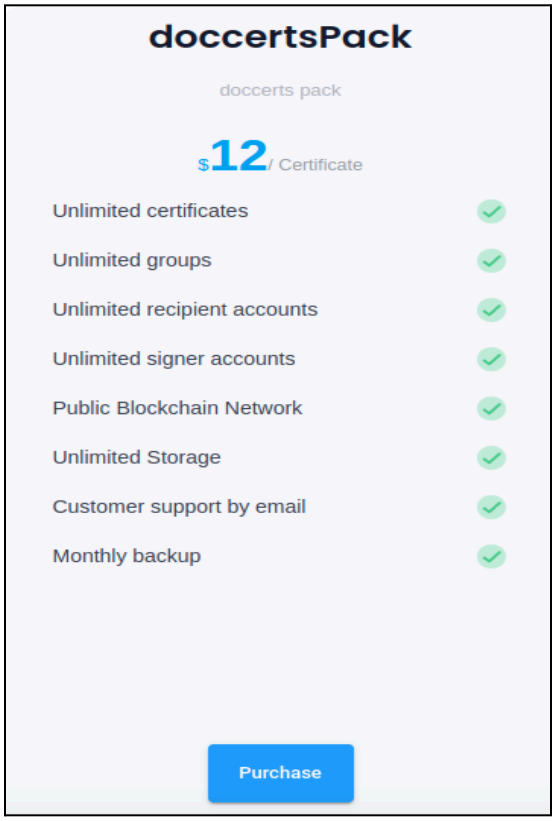

2. Pack

- Purchase a pack

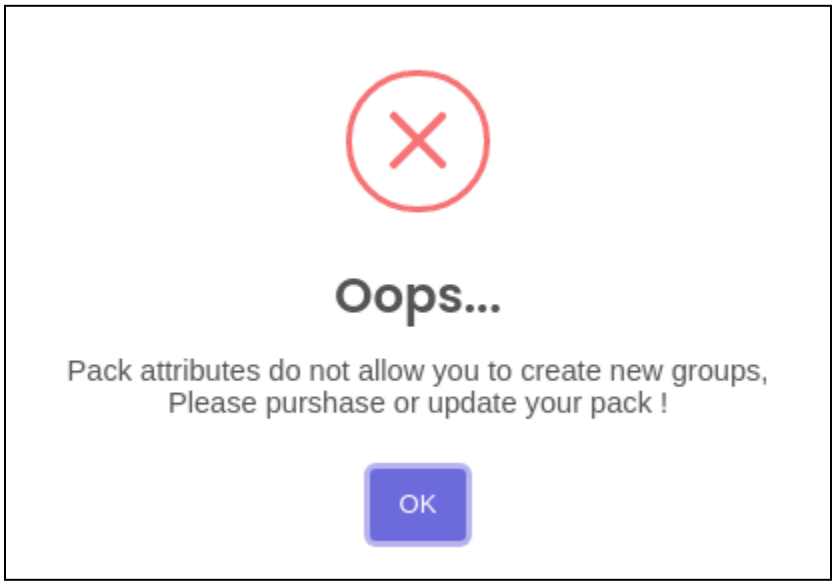

After creating an issuer organization account, the user must purchase a pack to enable all or some issuer organization functionalities.

he can choose the plan by clicking on the purchase button.

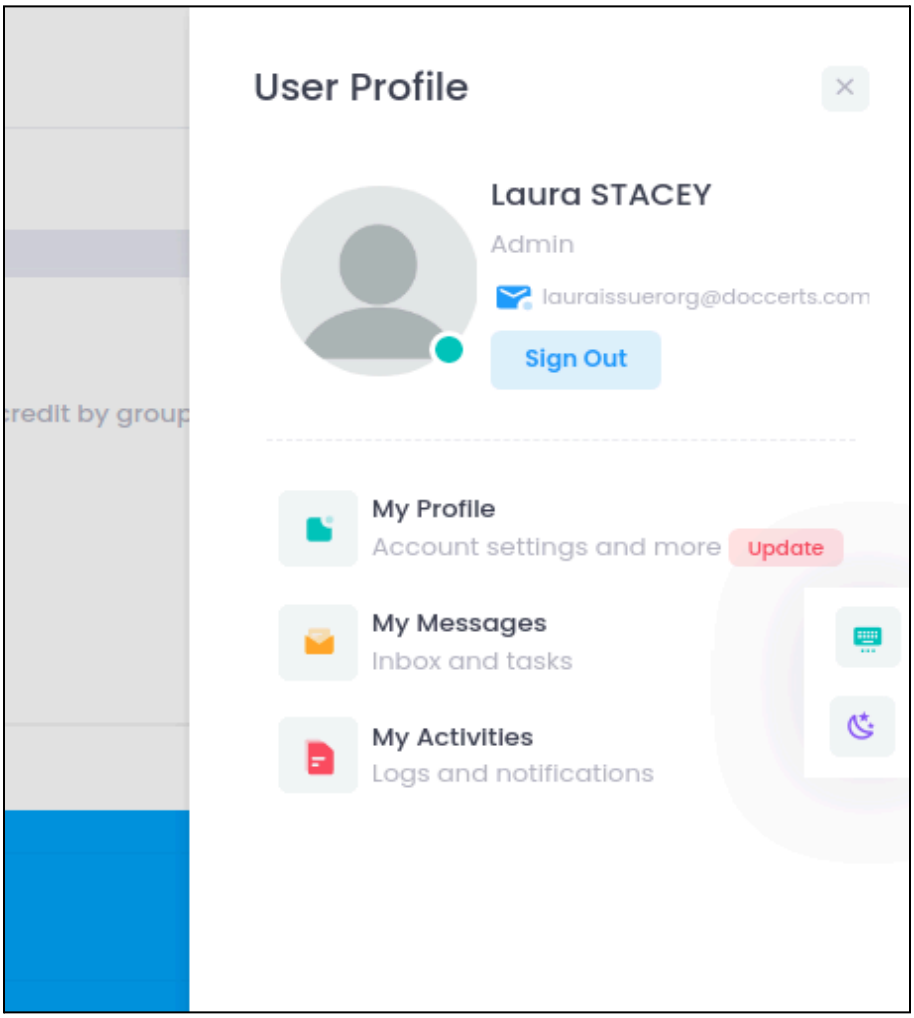

If he doesn't purchase a pack, he will not have the ability to create new groups or create/invite users.

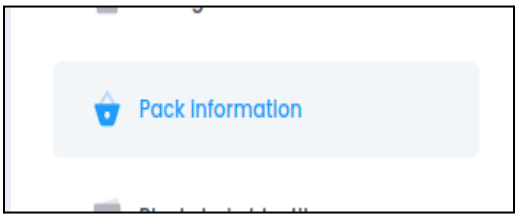

After purchasing a pack he can see the number of days left before upgrading his plan.

- Pack information

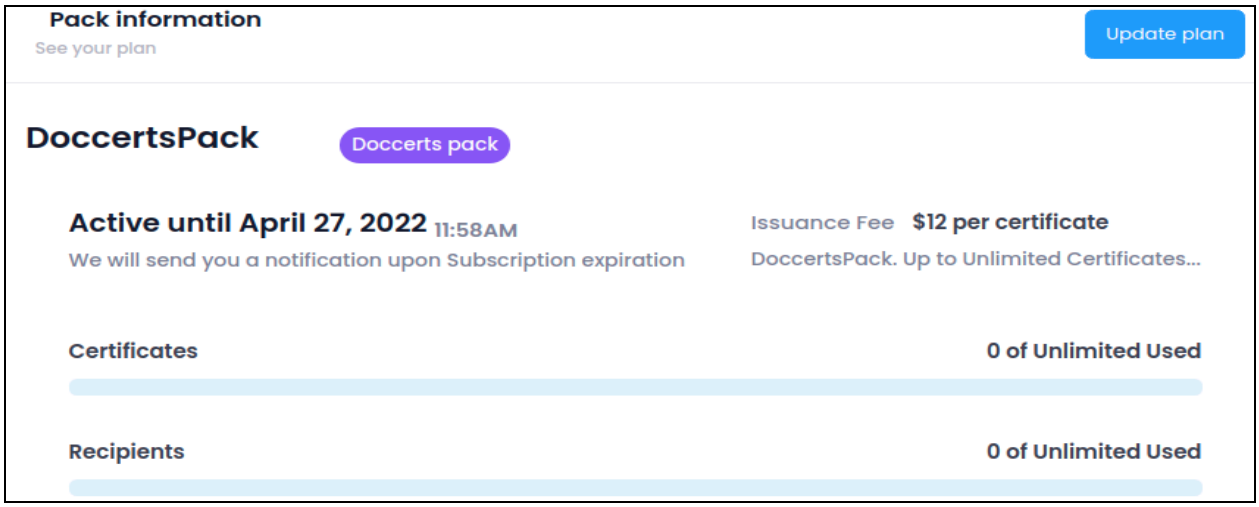

1- To get pack information, the user has to go to the profile (by clicking on “My profile” button).

2- Then he has to click on the “pack information” button.

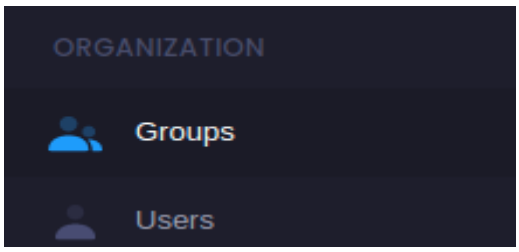

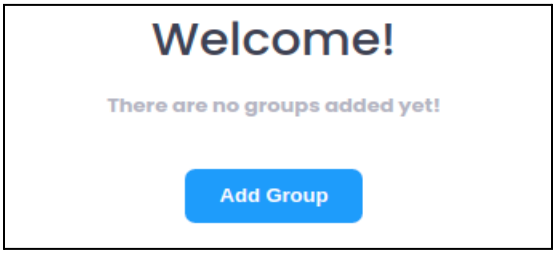

3 - Now, the can see his pack information, he can also update it by clicking on “Update plan”.

3. Sections

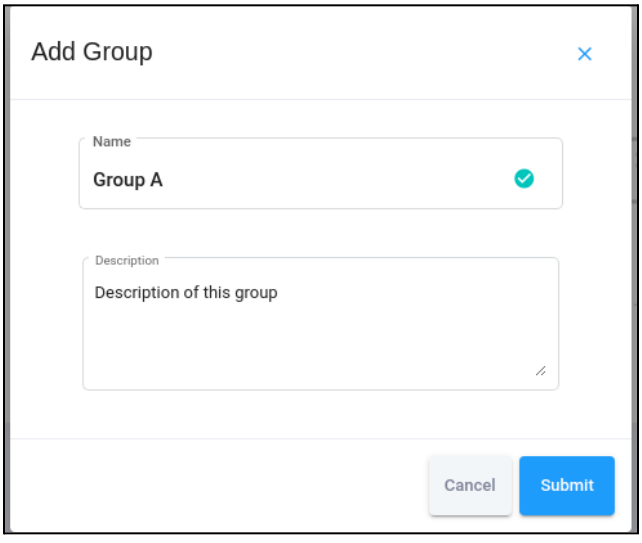

- Manage groups

The user can start by creating a new group for the users.

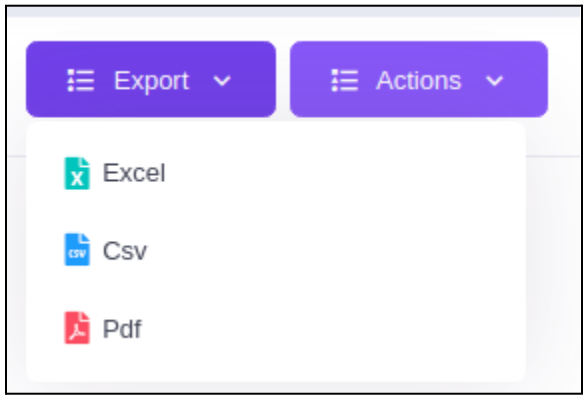

The first thing he has to do is click on the “Add Group” button

He needs to fill this form before clicking on the “Submit” button !

In this section the user can manage his groups by :

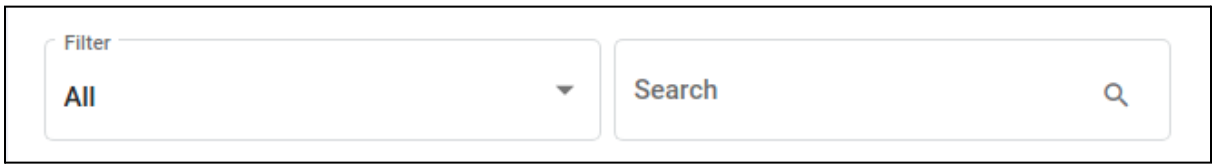

- Export groups list

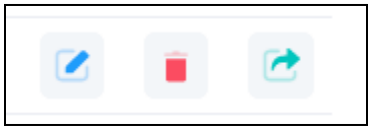

In the Listing window the user can always export the group's information as an Excel/Csv/Pdf file.

- Search or filter groups :

The user can also apply a filter and/or a search operation to your data.

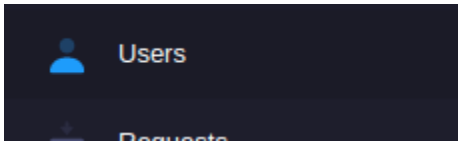

- Edit, delete and send credit

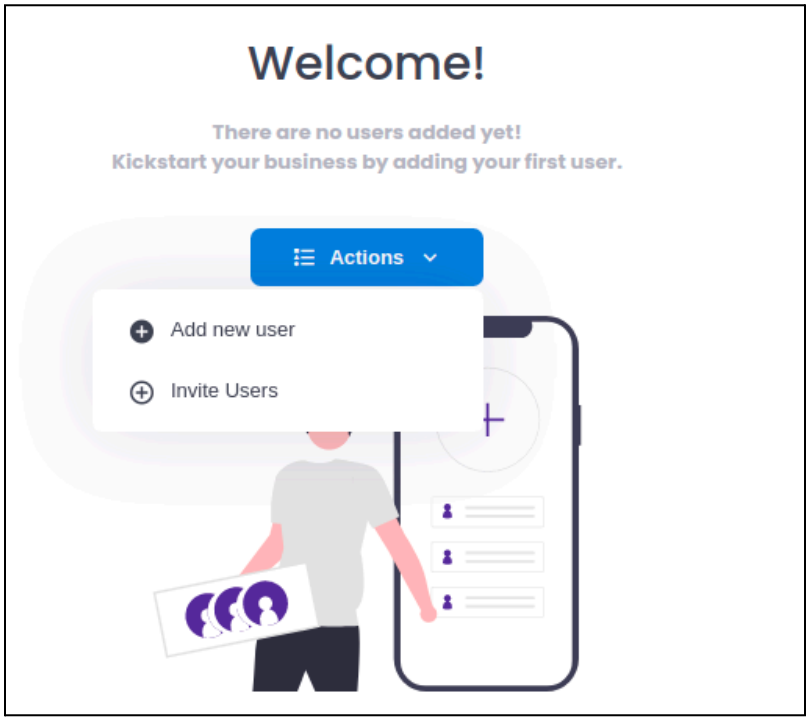

he can update or delete group/groups, also he has the possibility to send credit to it.

- Manage users

In this section the organization’s admin can manage the users by creating or inviting new users.

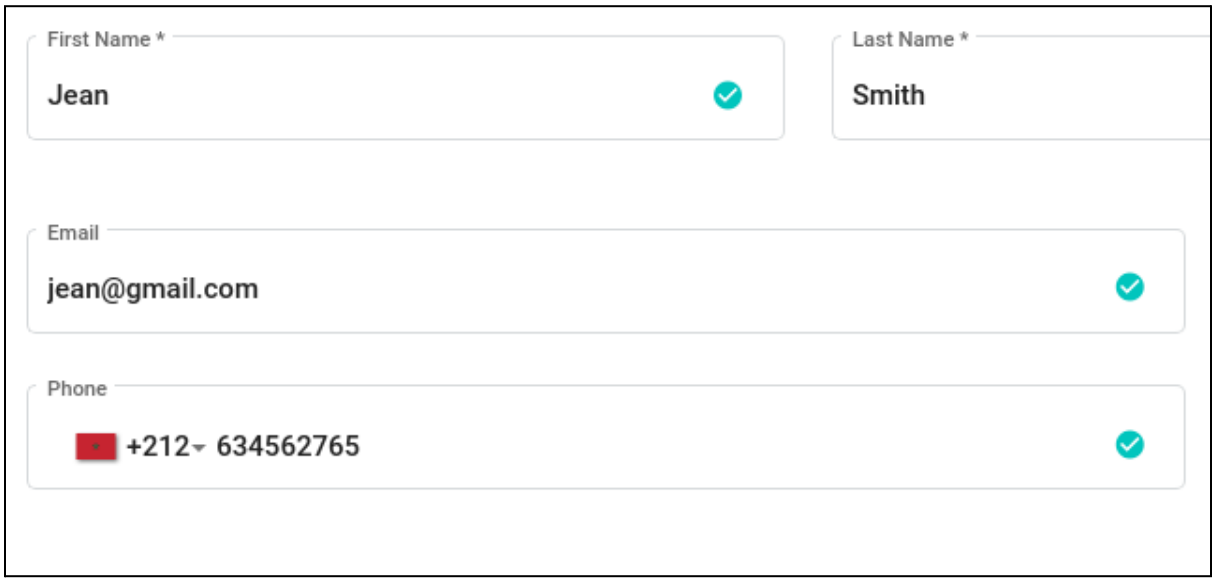

he can add or invite a new user by clicking on “Add new user” to create a new user, or by clicking on “Invite users” to send an invitation.

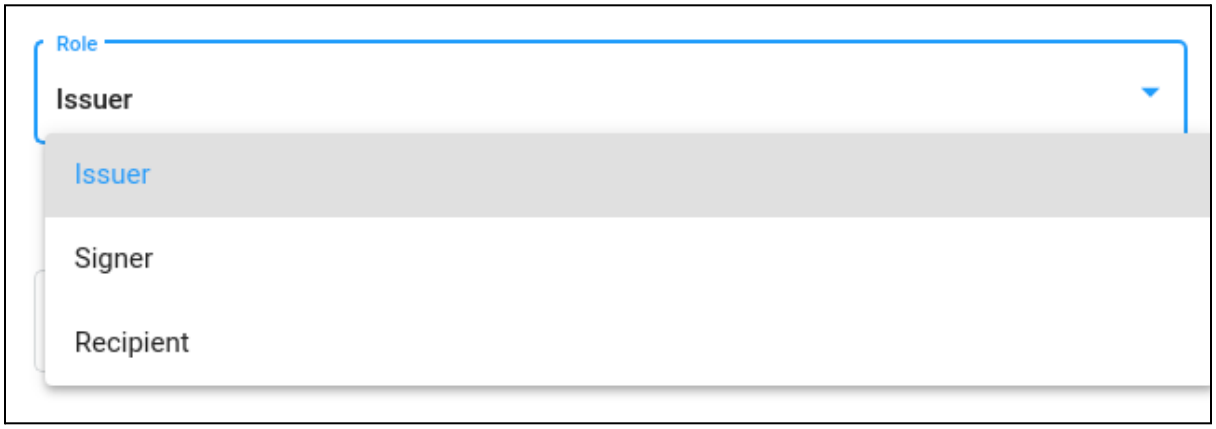

There are 3 types of users :

- Recipient
- Signer
- Issuer

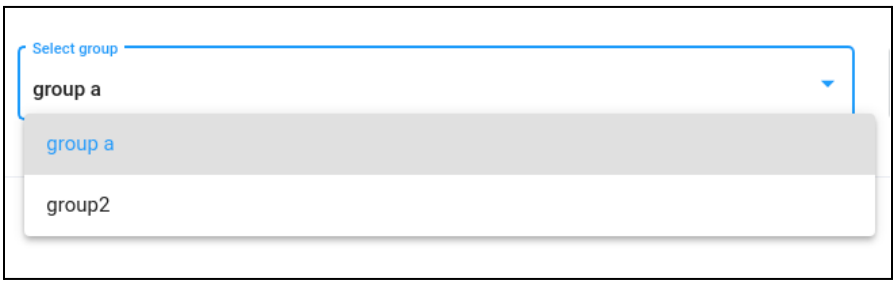

- Create an issuer or a signer (3 steps)
  - Fill personal information

- Choose a role

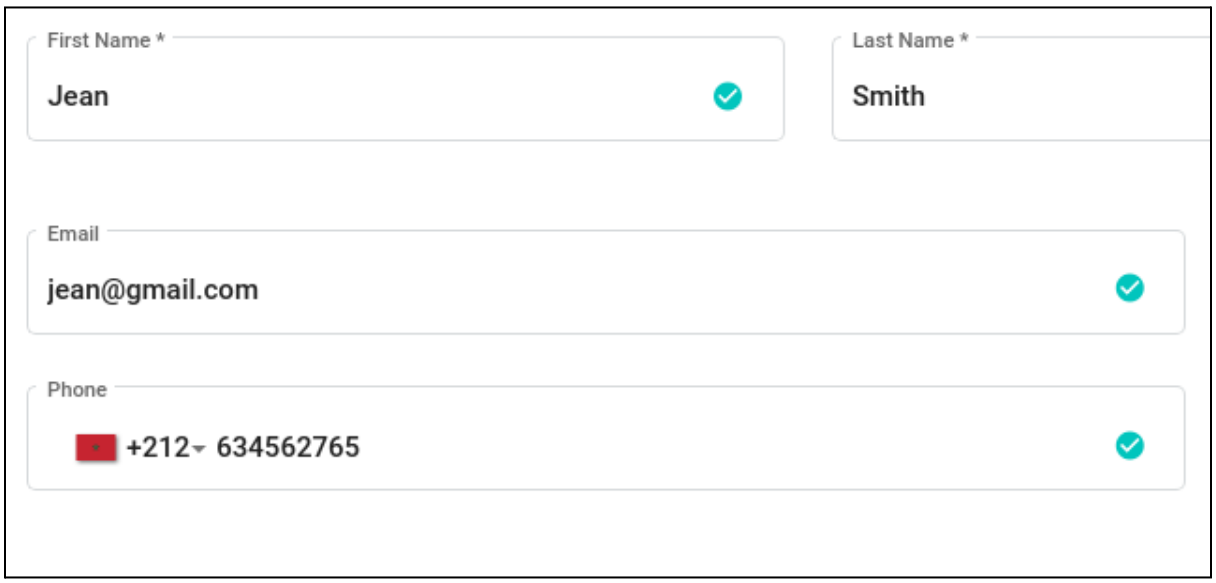

- Choose a group

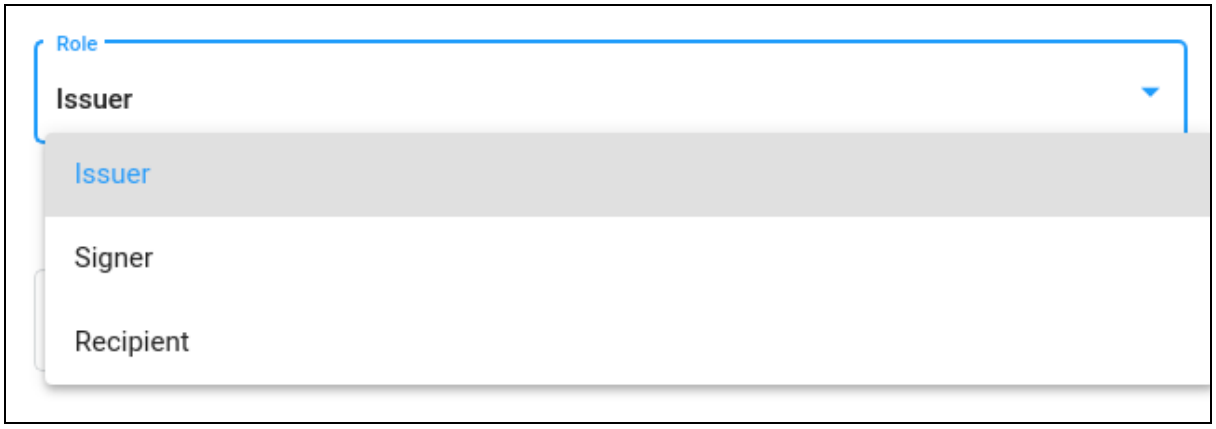

And click on the “Submit” button.

- Create a recipient (4 steps)

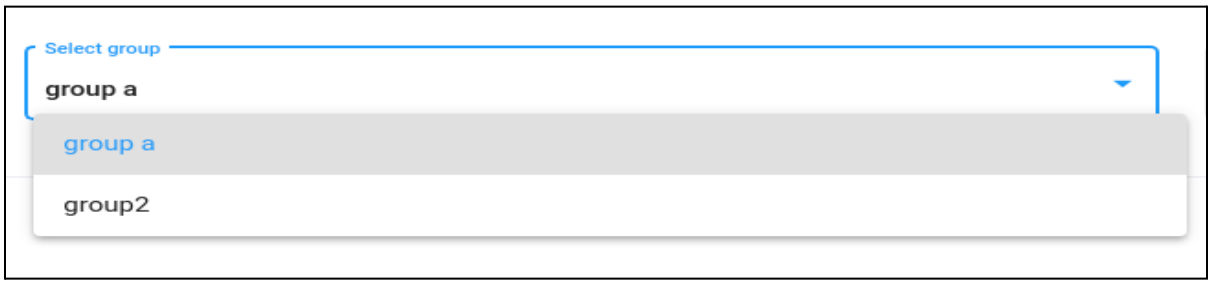

- Fill personal information

- Choose a role

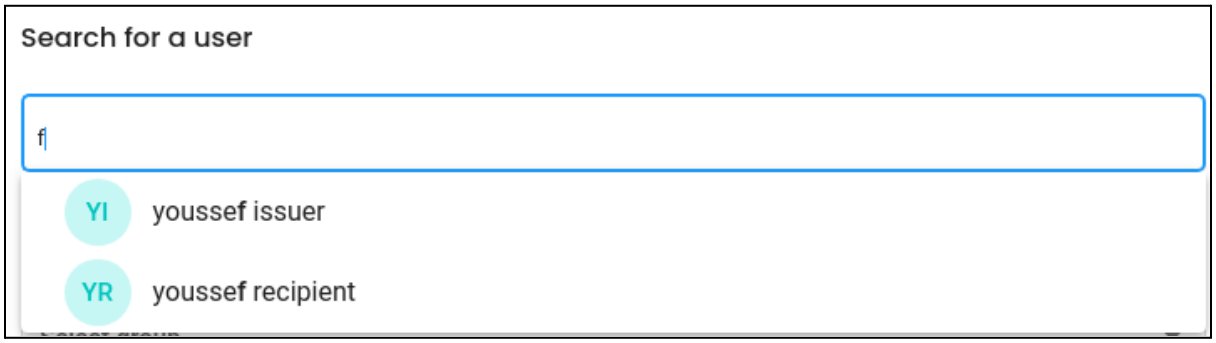

- Choose a group

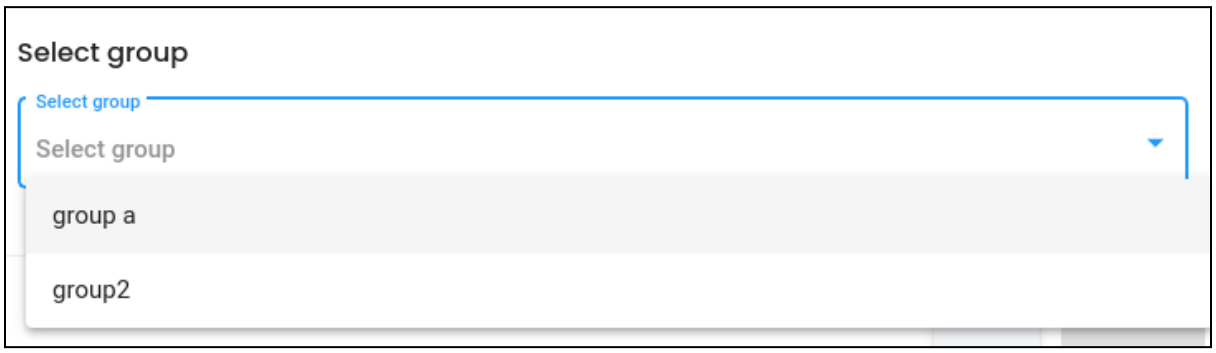

- Finally choose a category

- Invite a user

The first step is to search for a user

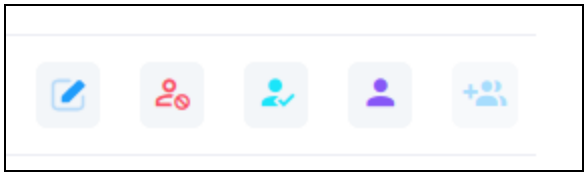

After this step, you must choose a group for this user

- Update user

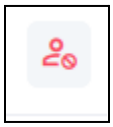

Actions buttons :

The user can also change the user's information by clicking on the update button

- Dissociate user

The user can also dissociate the user from the organization by clicking on the "dissociate user" button.

- Block/Unblock user

Block or

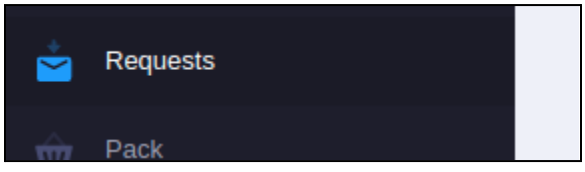

Unblock user account

- Impersonate account

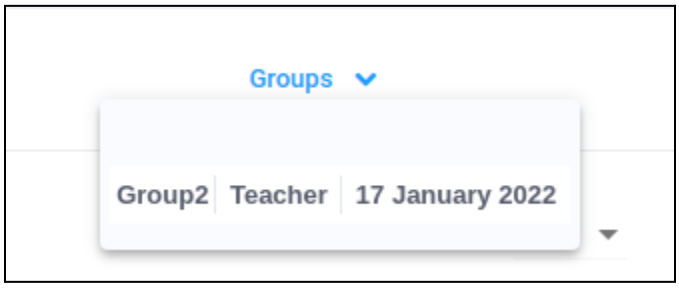

Impersonate account by issuer organization, give him the permission to connect to DocCerts by the selected user account.

- Manage requests

In this section the organization’s administrator can accept/reject requests.

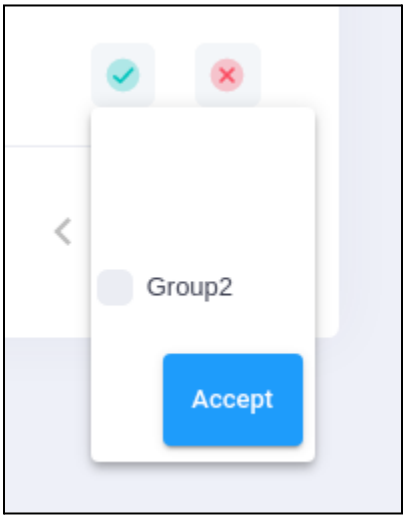

Also he has the possibility to see (Group, occupation and date) for a user request

To accept or reject request, use this buttons :

- Accept request

To accept a request he must choose a group before clicking on the “Accept” button.

- Reject request

he can also reject a request by clicking on  the reject button.

- Blockchain Identity

The user can see his own **Blockchain** identity. By going to the profile section, and clicking on “Blockchain identity”.

- Generate private Blockchain identity

In his first visit to this feature, the user must generate his private Blockchain identity.

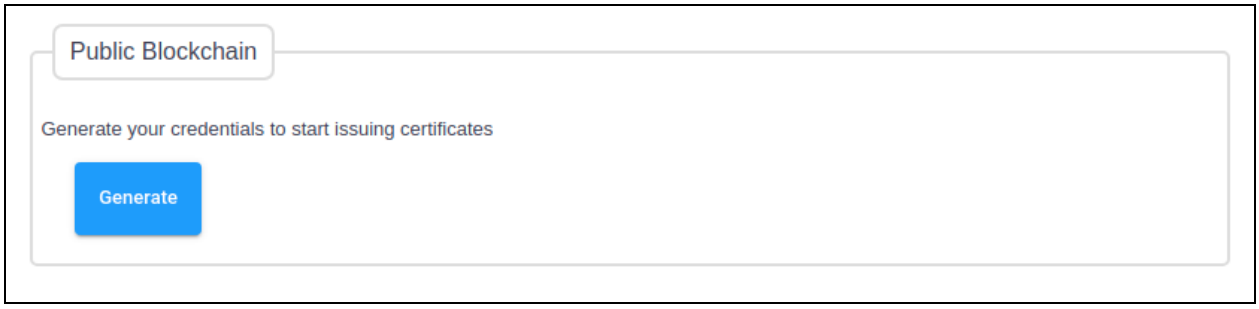

By clicking on “Generate” button, he will get his private Blockchain identity, as shown in the following figure :

- Generate public Blockchain identity

The user must generate his own public Blockchain identity.

By clicking on “Generate” button, he will get his public Blockchain identity, as shown in the following figure :

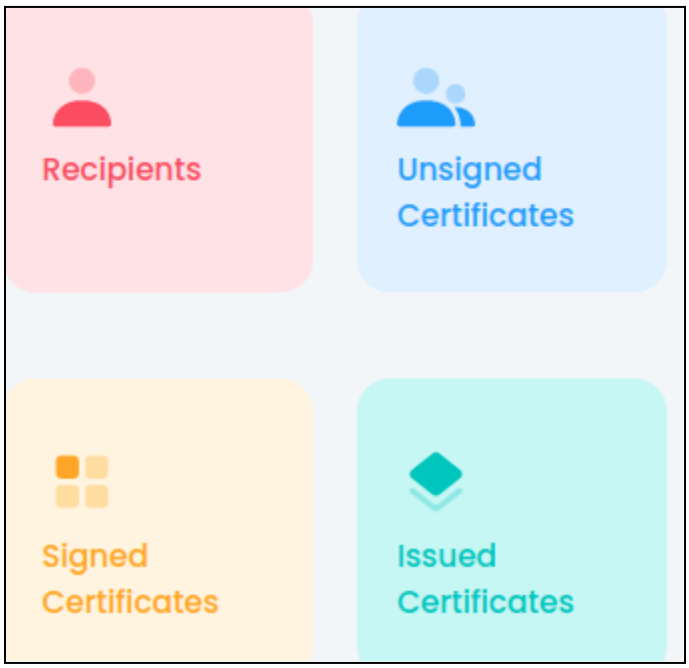

Recipient

Recipient is the user who represents the candidate who receives the certificates. where he can consult his own certificates (signed or not signed) , manage access to his certificates and share them.

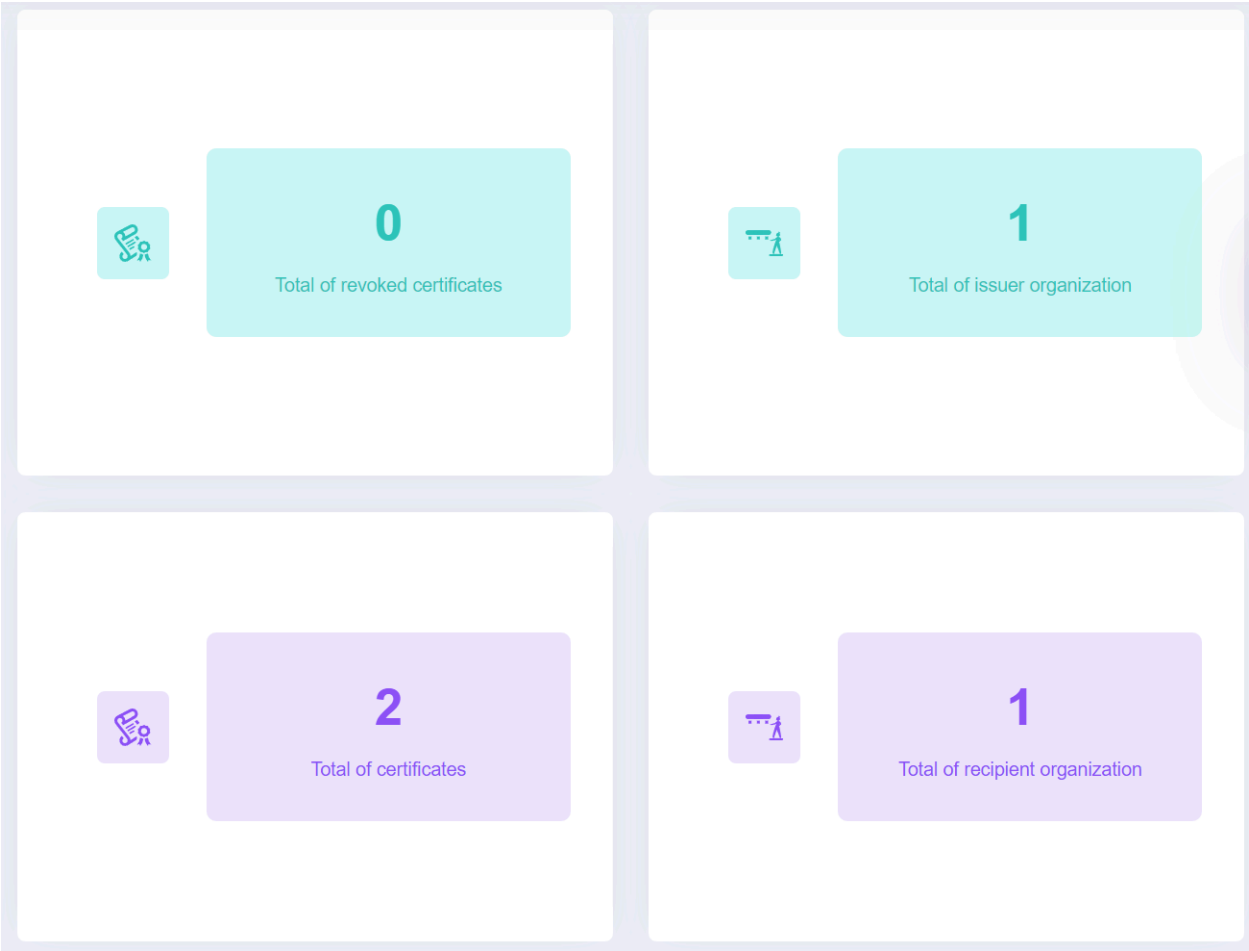

1. Getting started

Once logged in, the recipient will see a comprehensive dashboard providing information on different aspects of the application,

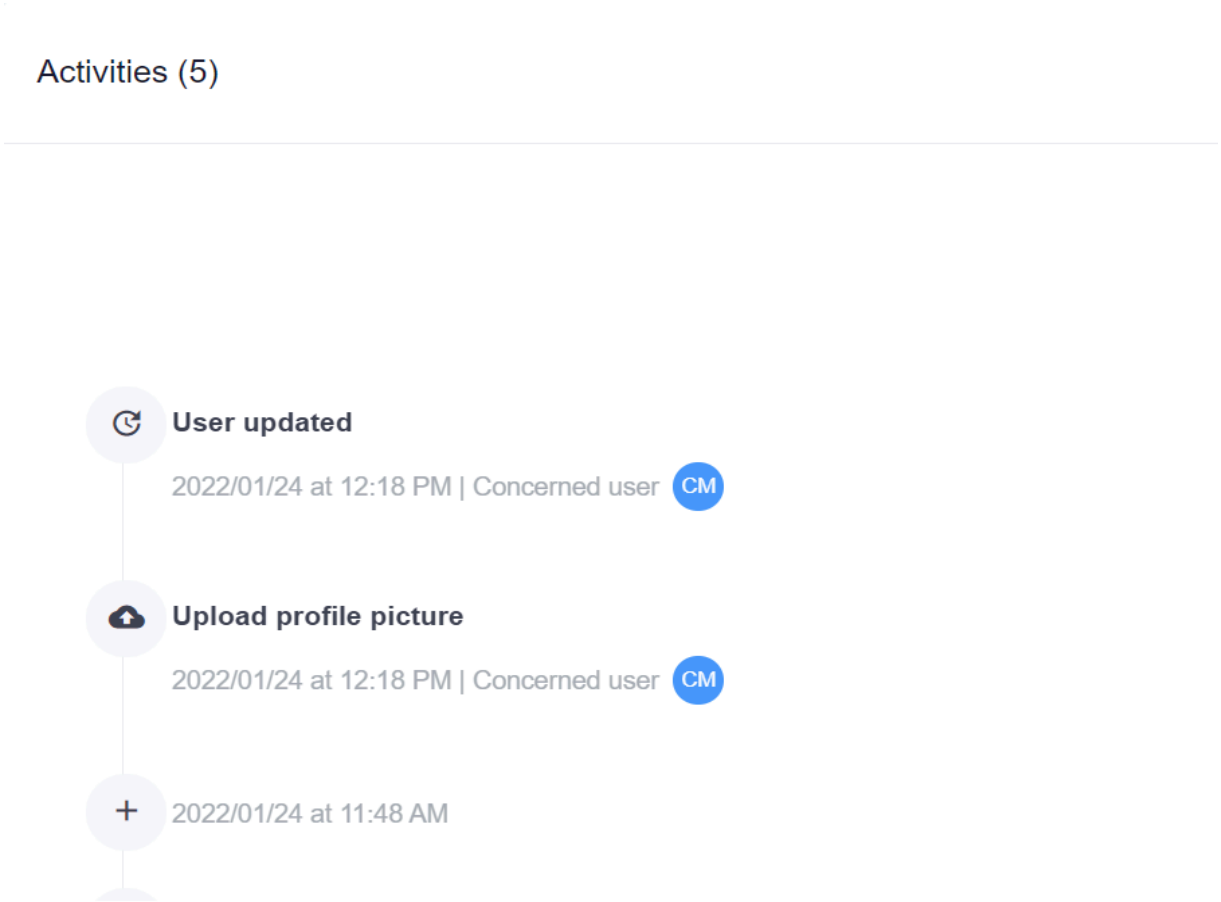

For the recipient Dashboard he can see :

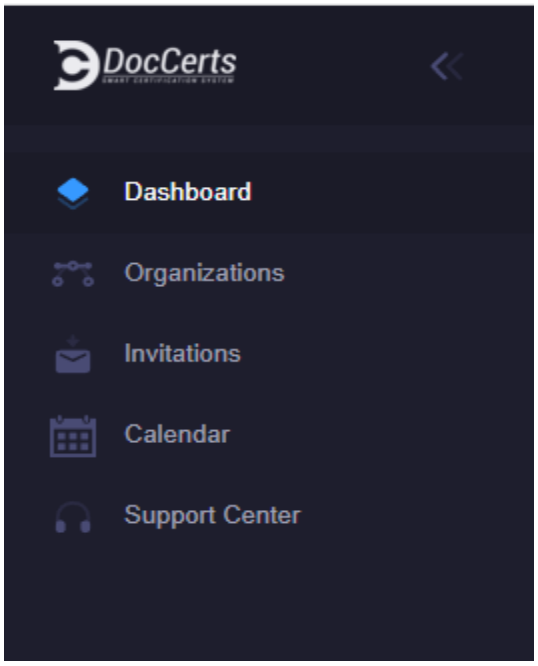

- Total of revoked certificates
- Total of issuer organization
- Total of certificates
- Total of recipient organization

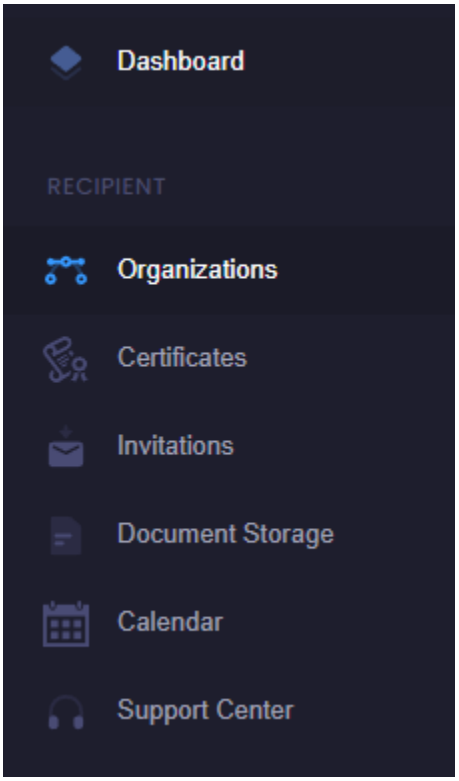

In the same section the recipient can track his activities

As his first login the recipient can access only five sections on the sidebar.

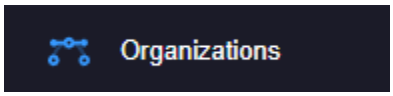

The recipient has to be in an organization by sending a request or accepting an invitation so he can have access to ‘Certificates’ and’ Document Storage’ sections.

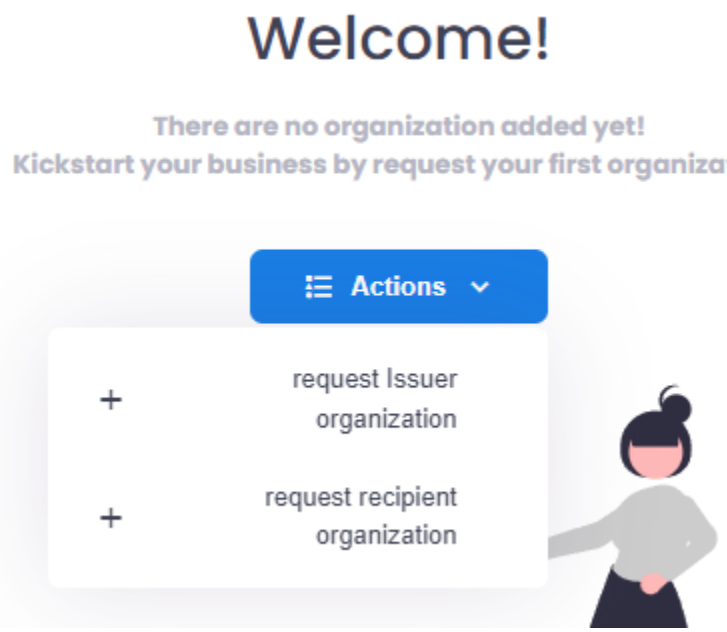

2. Sections

- Organizations

This section where the user can apply to join an organization

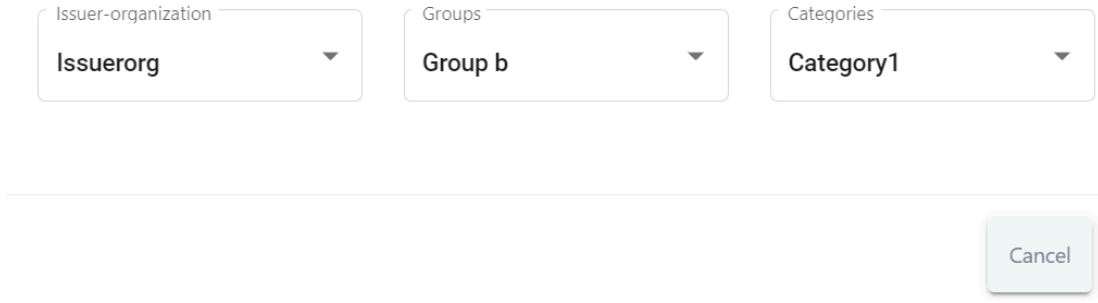

The recipient can request both “Issuer Organization” and “recipient Organization”

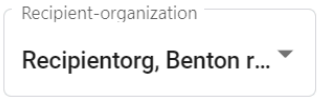

1. Request Issuer organization :

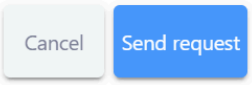

To send a request to the Issuer organization the recipient must select an organization then he will be able to choose the group and the category of the certificate.

2. Request recipient organization :

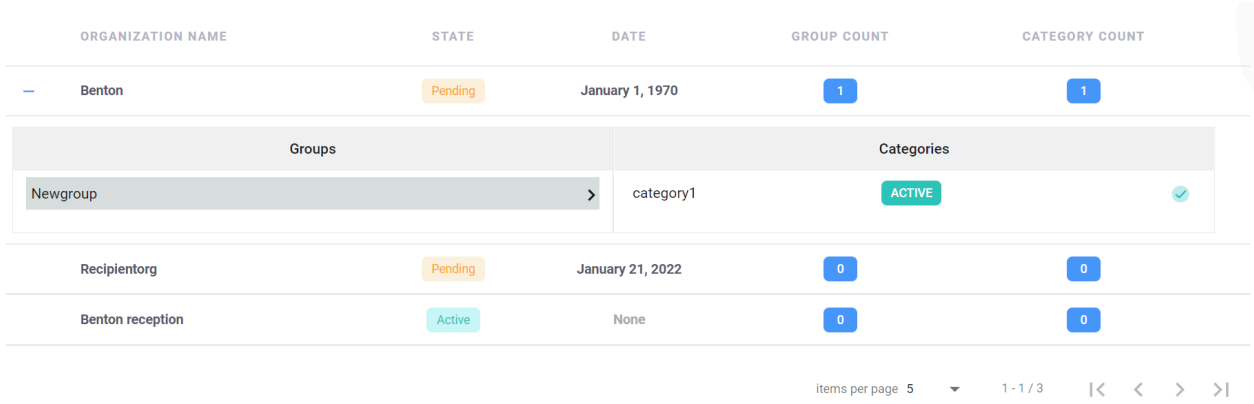

The recipient can select multiple Recipient organizations to send a request

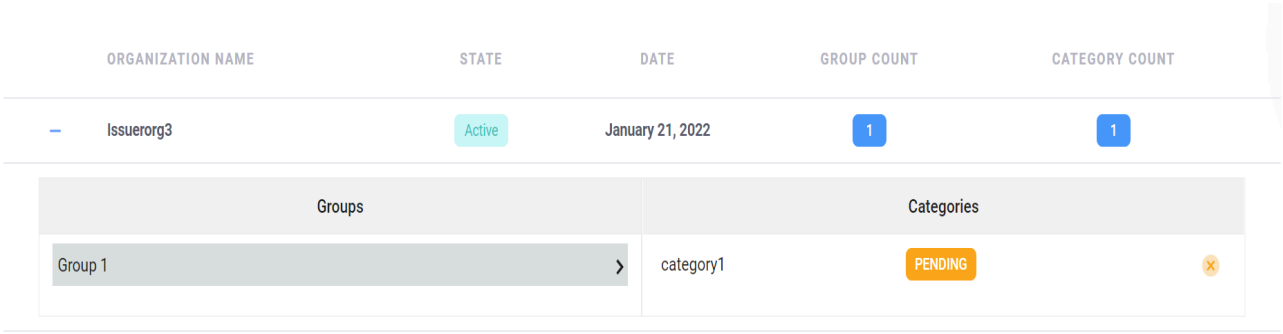

3. Listing organizations

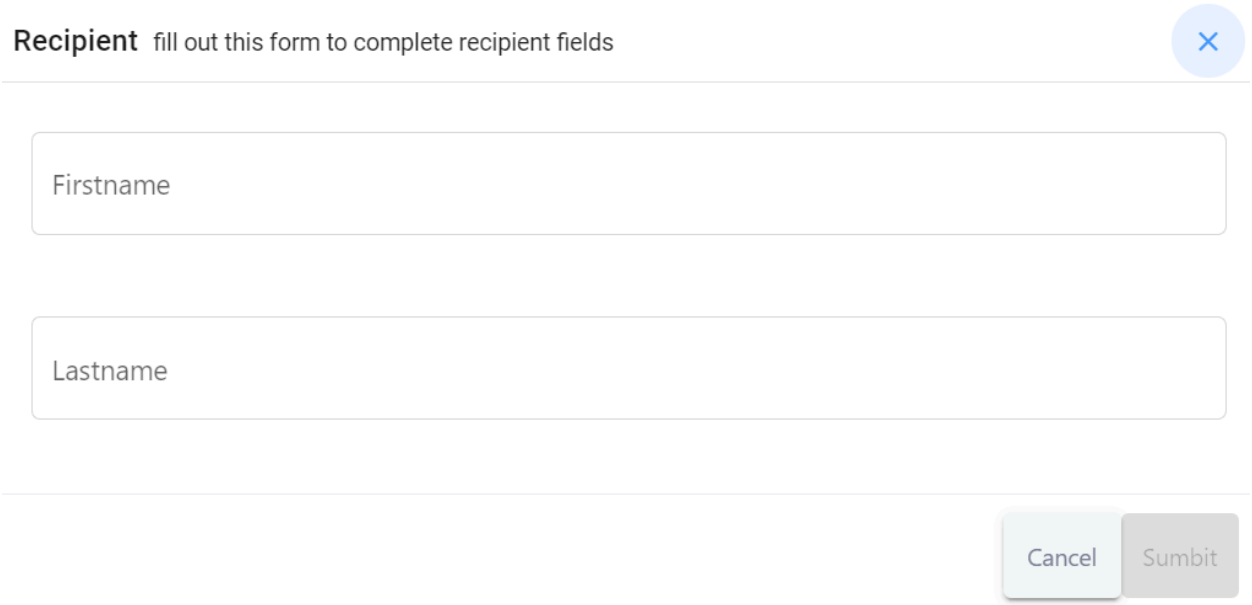

In this section the recipient can see his pending and active organizations

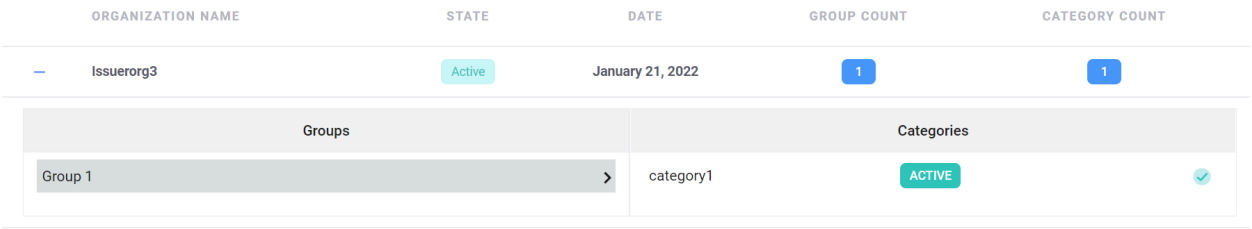

As we can see the category still pending because the recipient didn't fill out the category fields yet

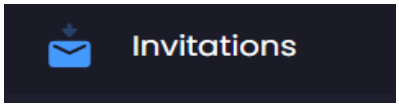

By clicking on the pending button the recipient can edit the category required fields.

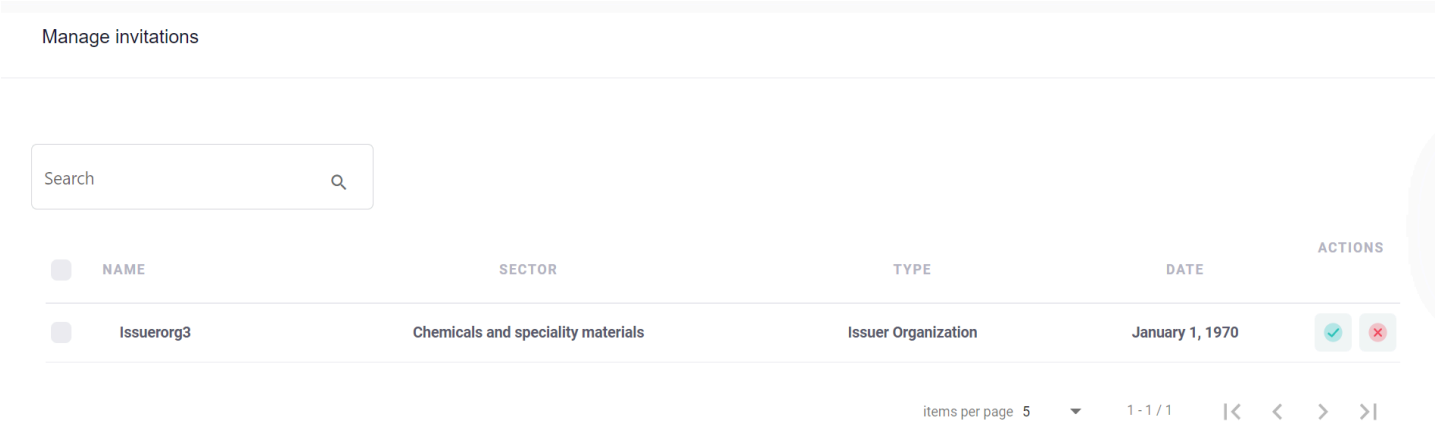

After providing the required fields the state changes to “Active ”, this change is shown real-time on the issuer portal and he can start creating the certificate immediately for the recipient.

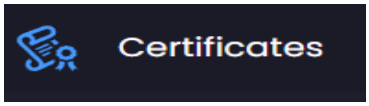

- Invitation

In this section the recipient manages the invitation sent by the recipient organization or the issuer .

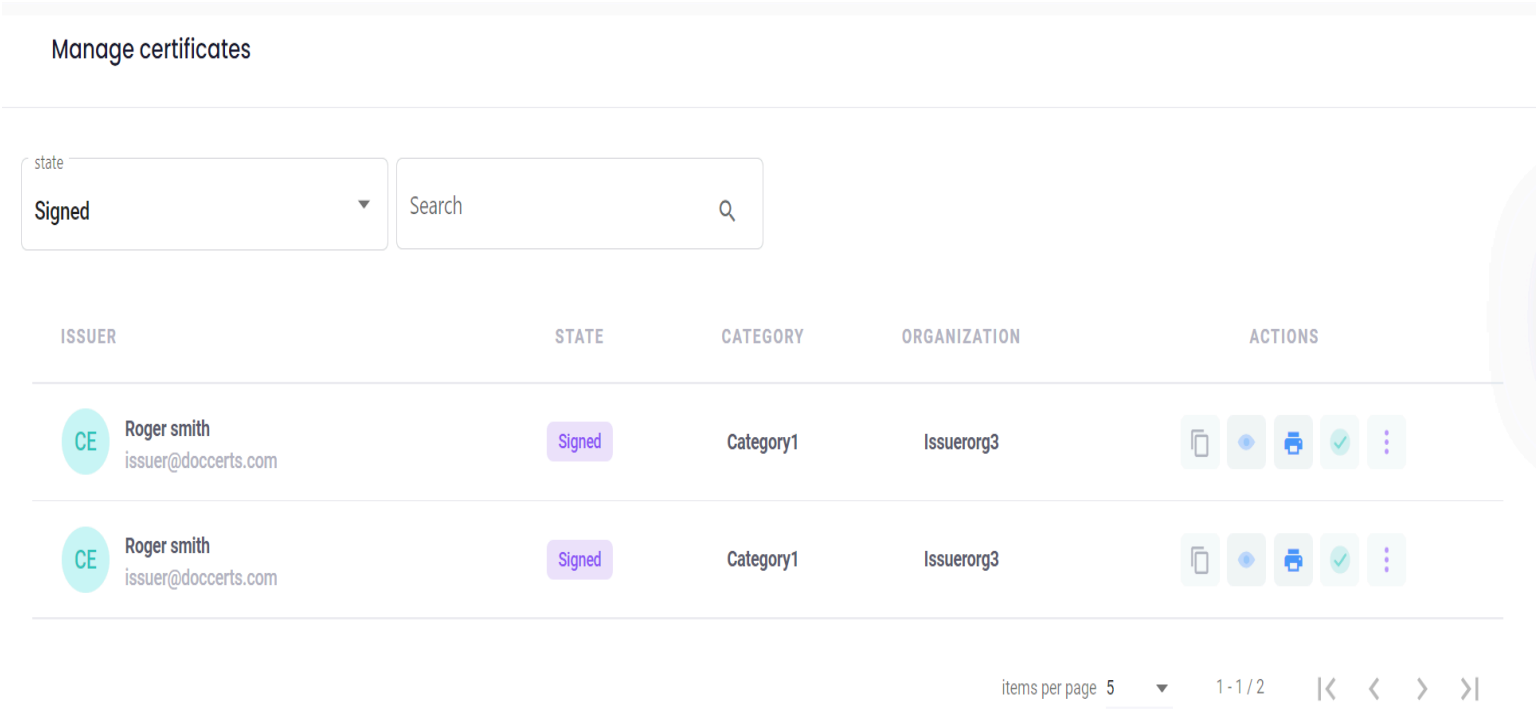

- Certificates

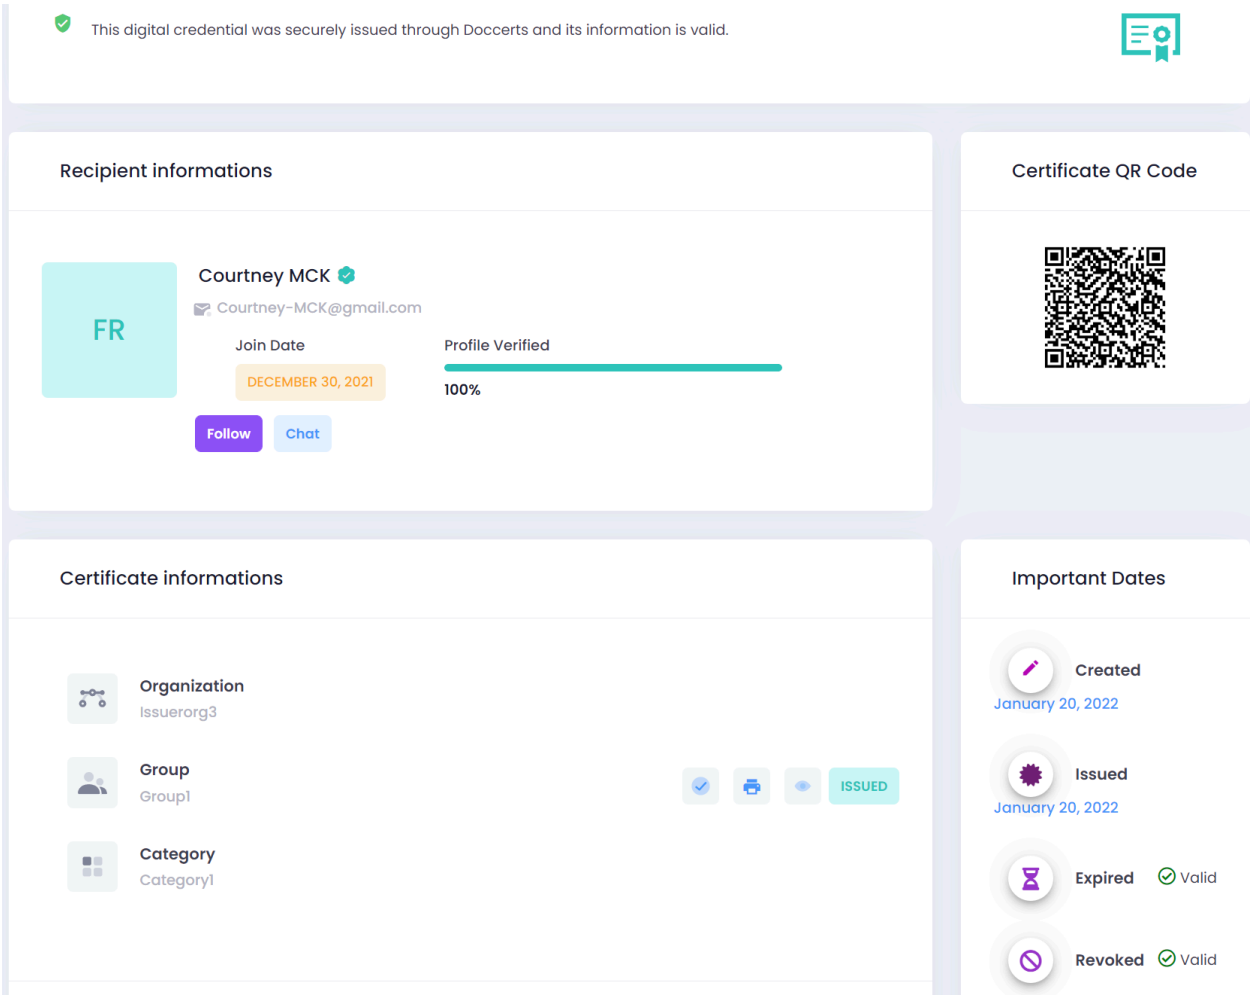

In this section the recipient manages his certificates where he can:

- View his certificate by clicking on the eye icon .
- Print the certificate .
- Share the certificate.
- Verify the certificate .

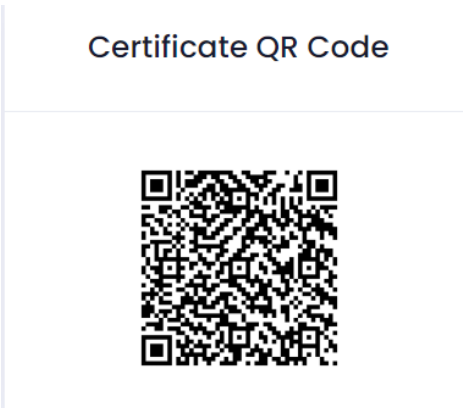

1. *Verification*

After the recipient click on the verification button he can see full details about his certificate

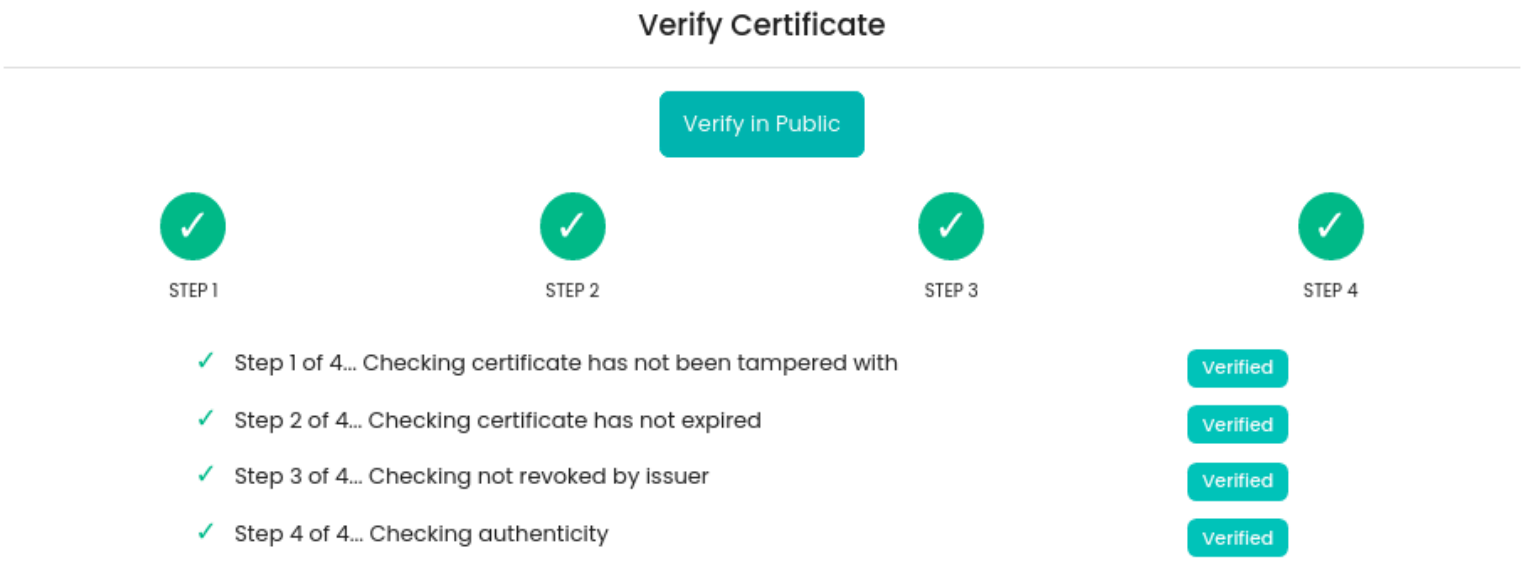

The recipient can share his certificate by sharing the certificateID or the QR code

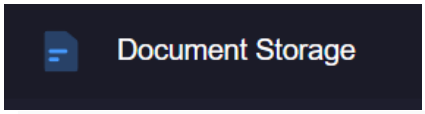

To verify his certificate on the blockChain he needs to click on the verification icon

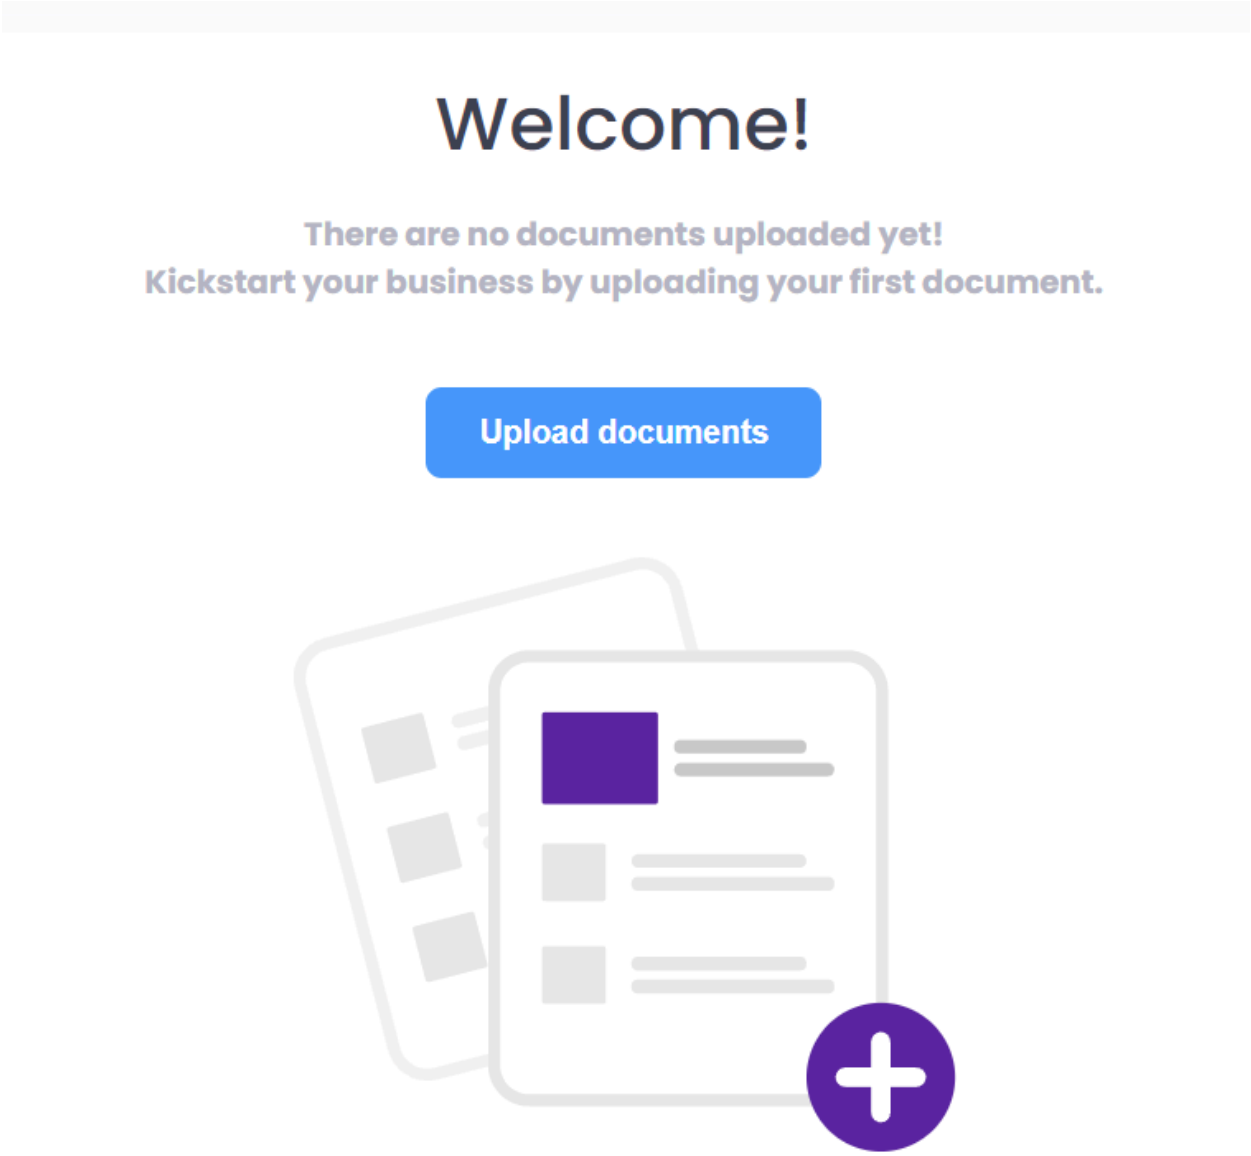

Then the recipient can verify his certificate on both private and public blockchain

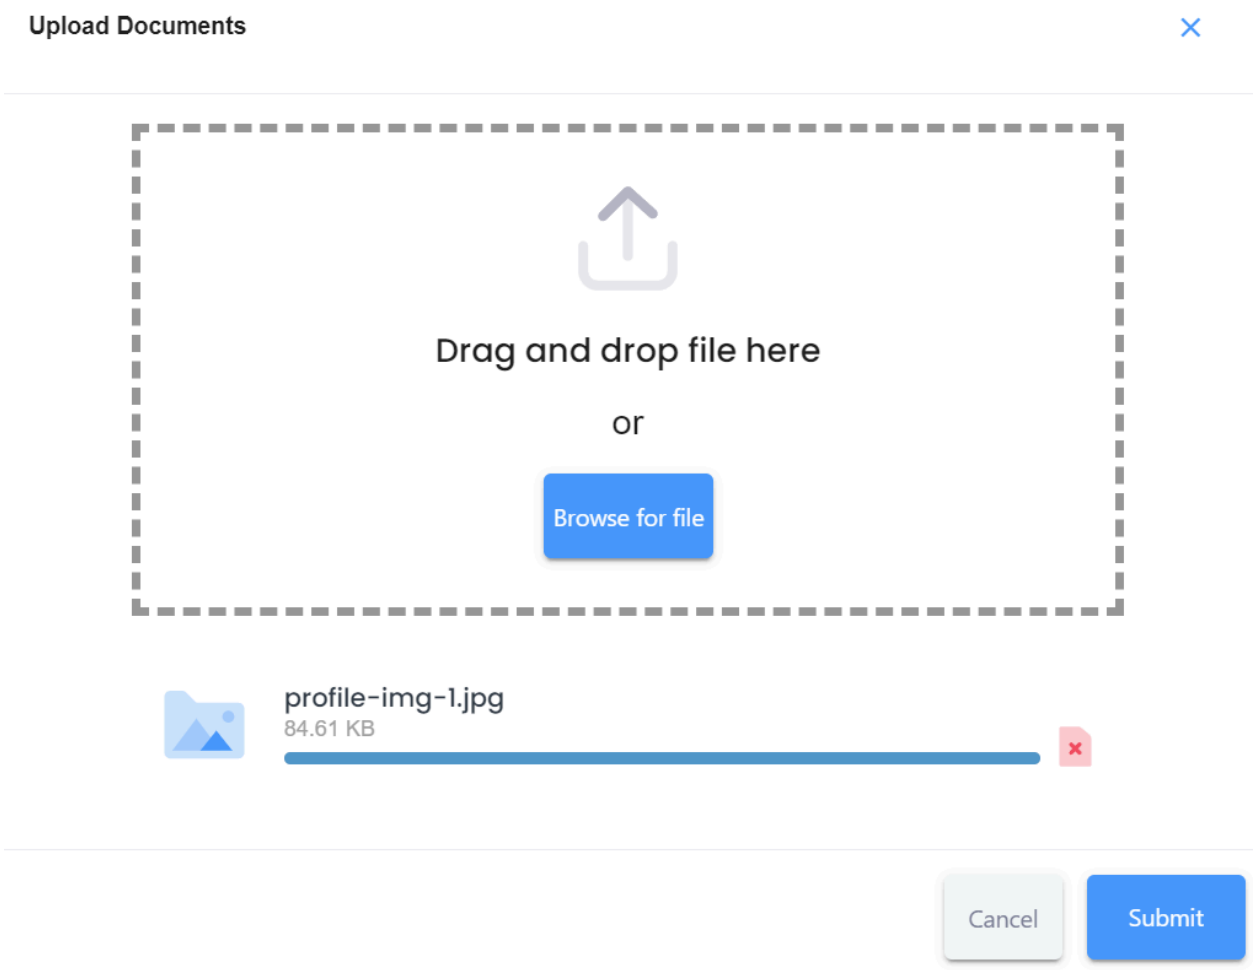

- Document Storage

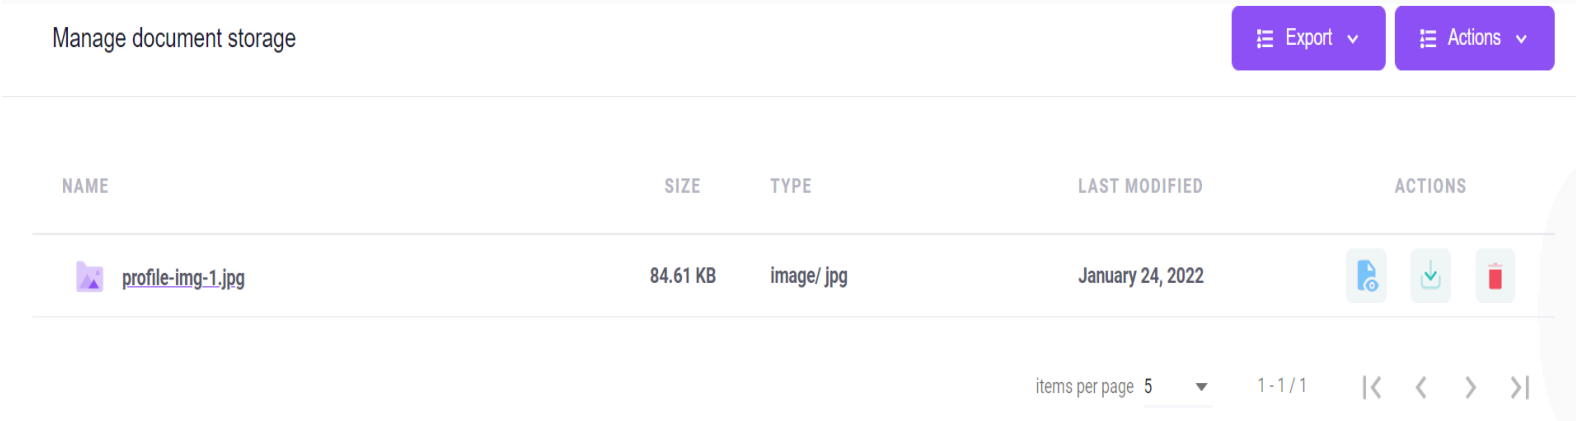

To be able to use images in Doccerts, the recipient needs to upload them to the document storage first.

For example to change the profile image the user needs to upload it on document storage first then go to profile to upload his image from the document storage.

Listing documents where the recipient can view,download or delete his document

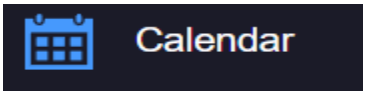

View Document : profile-img-1.jpg

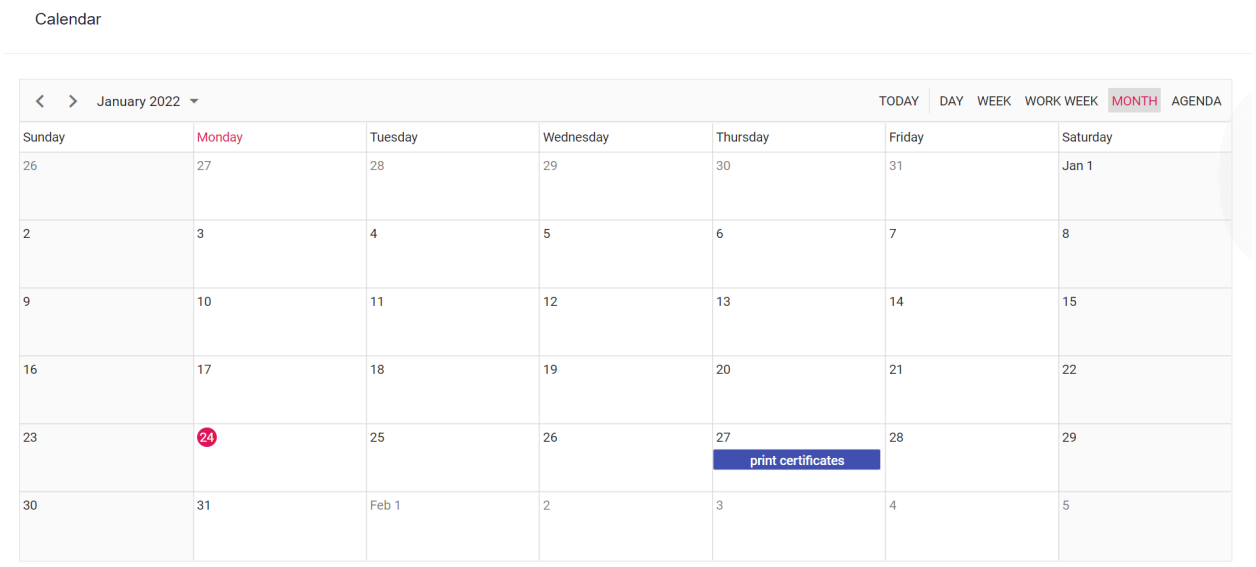

Type : **jpg** / Size **85 KB**

- Calendar

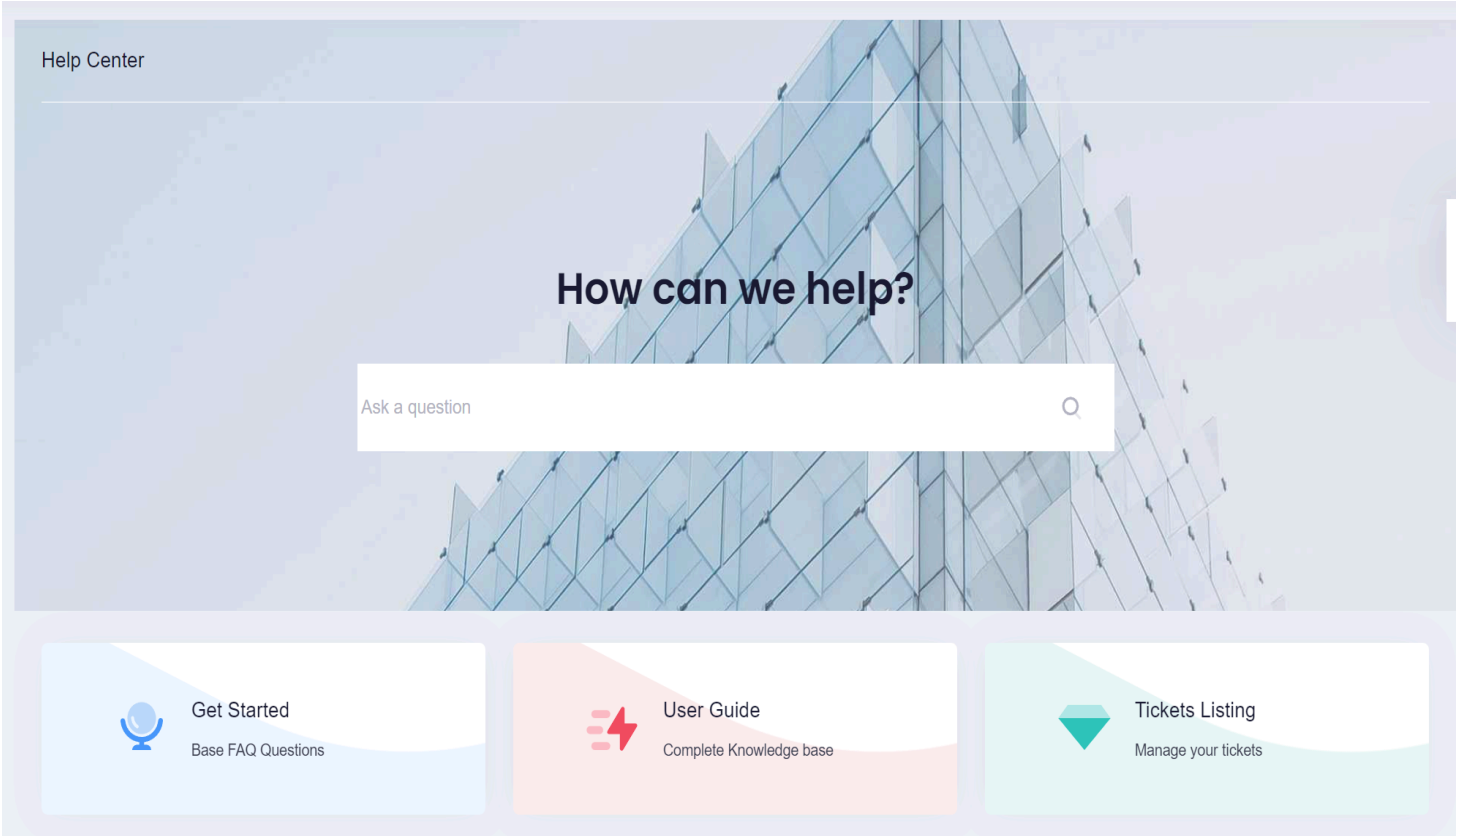

In this section the user can view add and edit an agenda

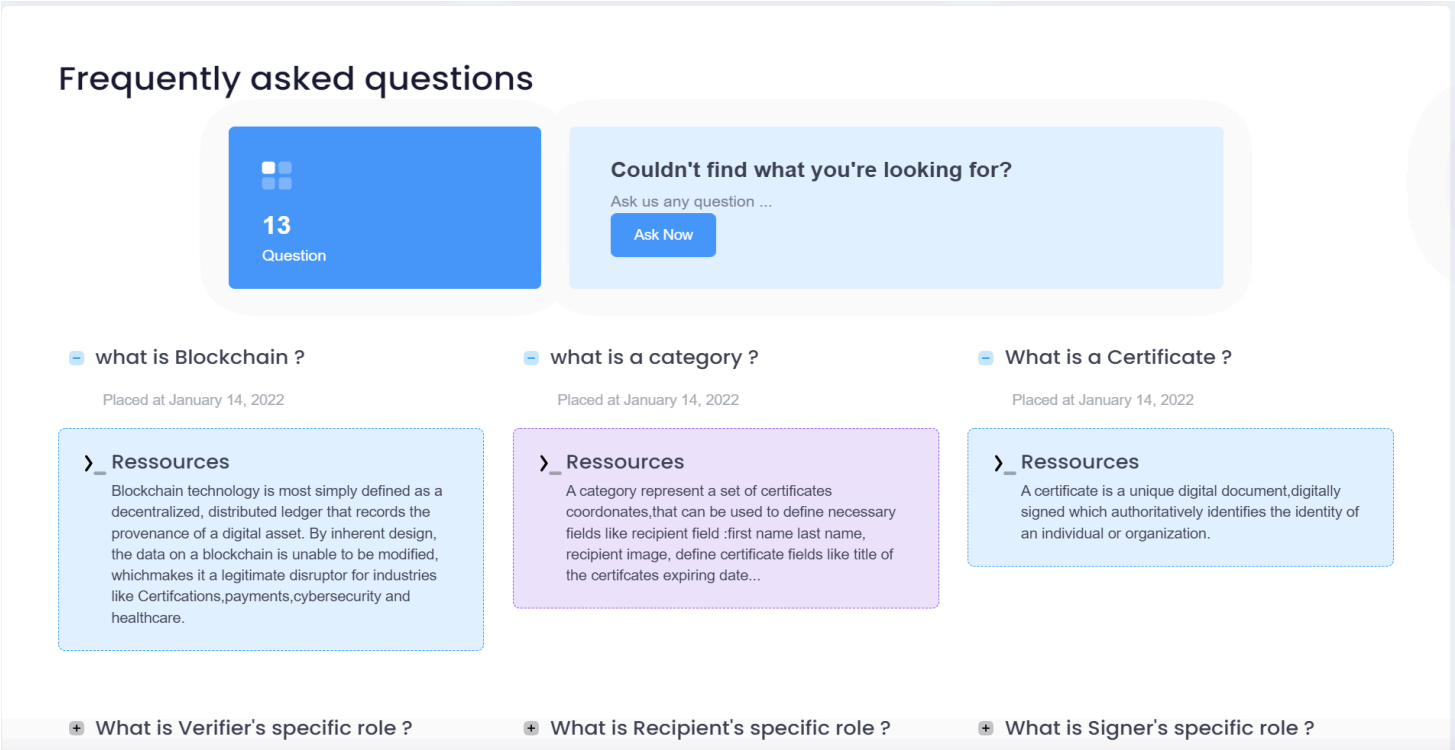

- Support Center

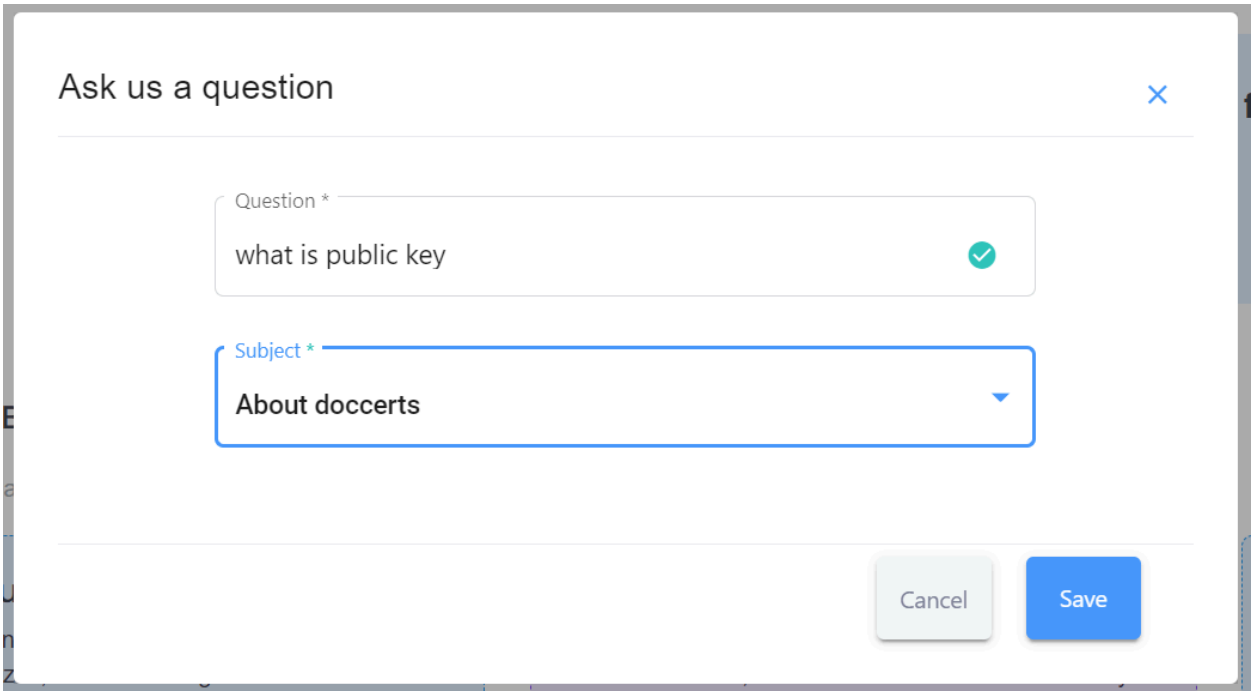

This section intended to help the user better understand the application and become familiar with it by asking questions or submitting a ticket.

1. Questions :

Here the user can find the frequently asked questions if he couldn't find his answer he can ask new question by clicking on Ask Now

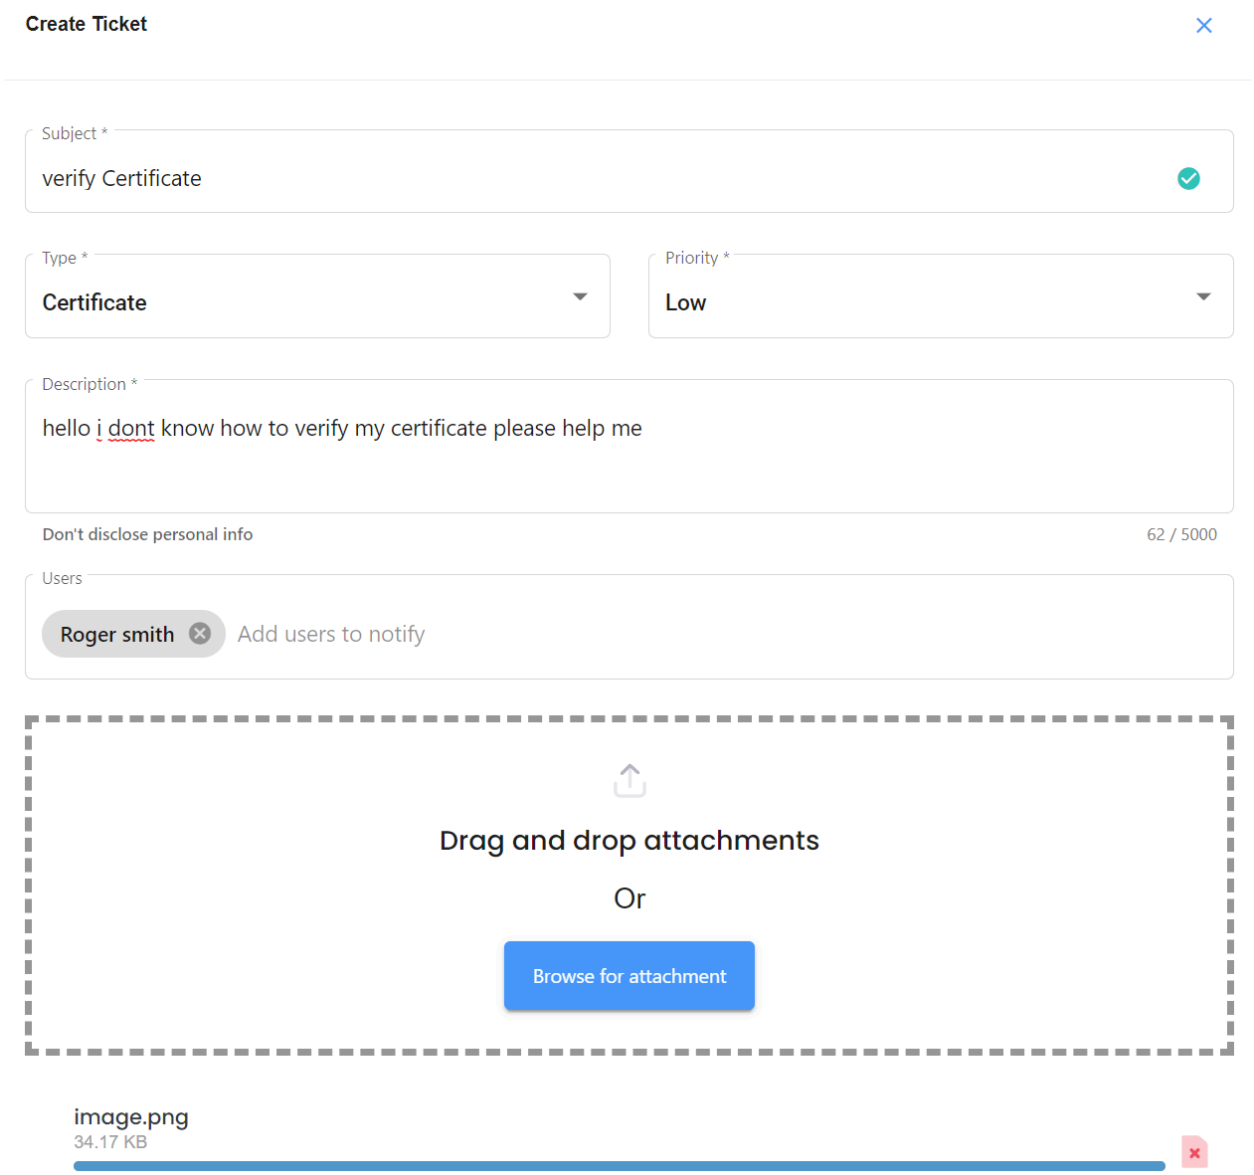

2. Tickets

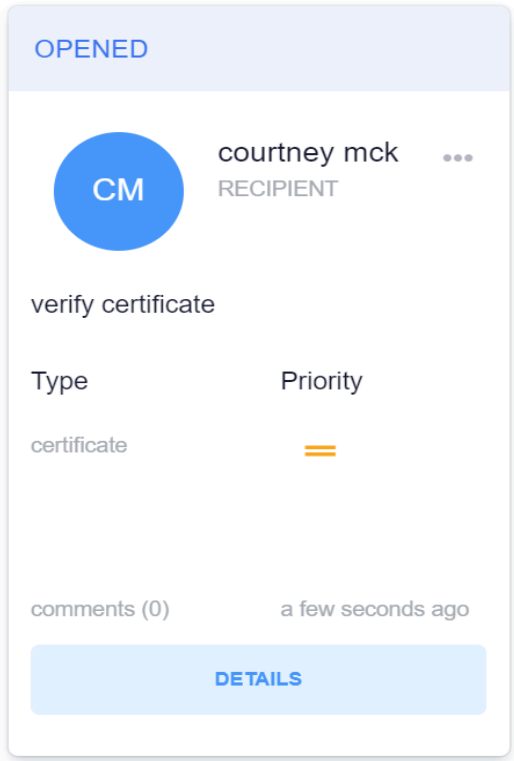

The user can submit a ticket where he describe his issue with the application

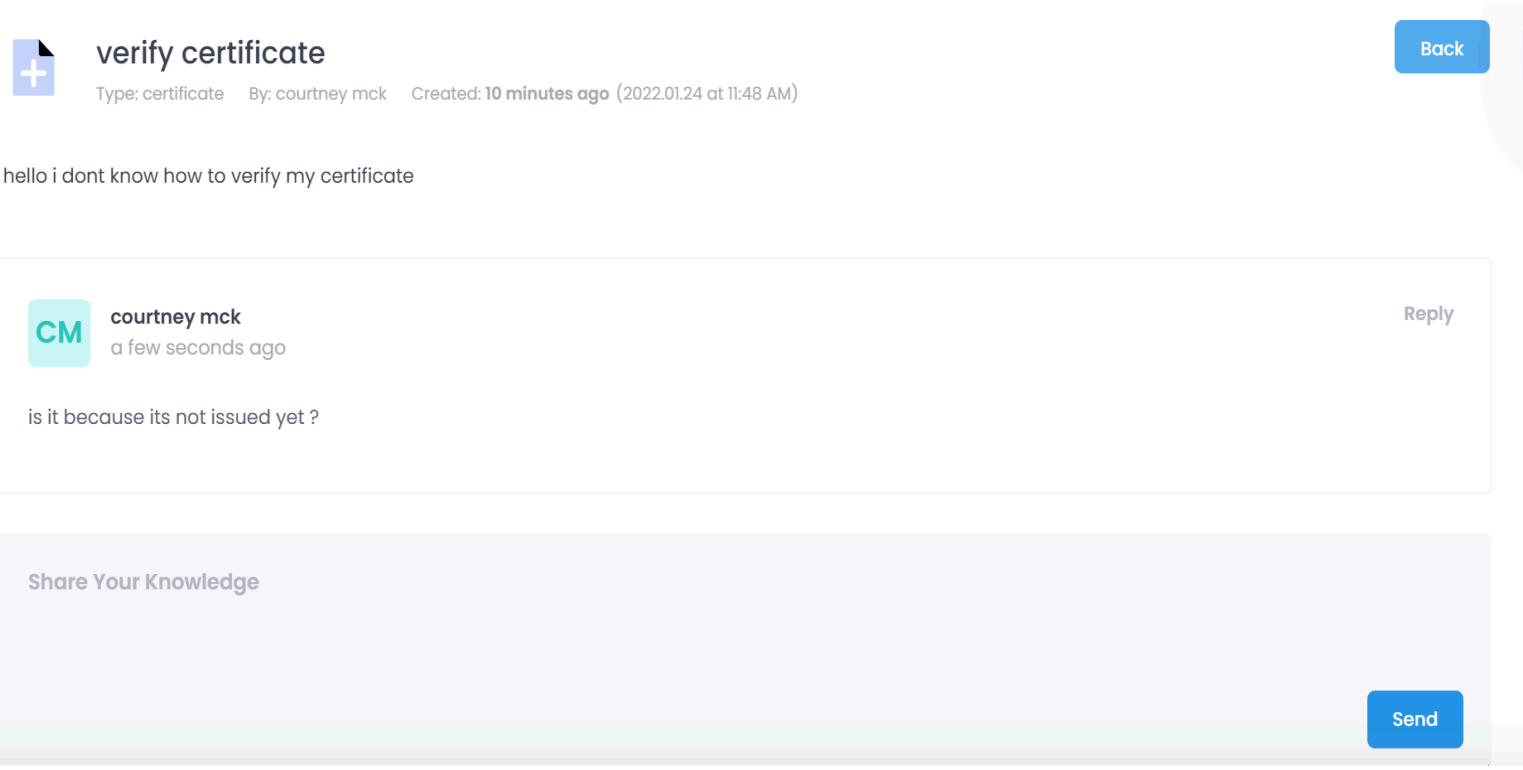

He can tag the user concerned and add attachments for more details

Support tickets (1)

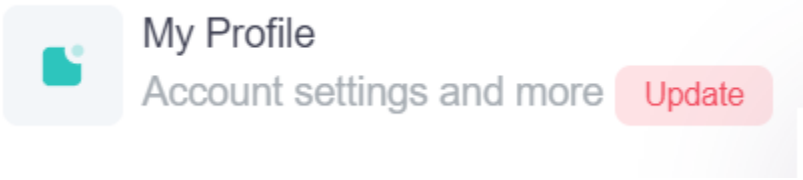

After listing his tickets the user can add more comments by clicking on the DETAILS button.

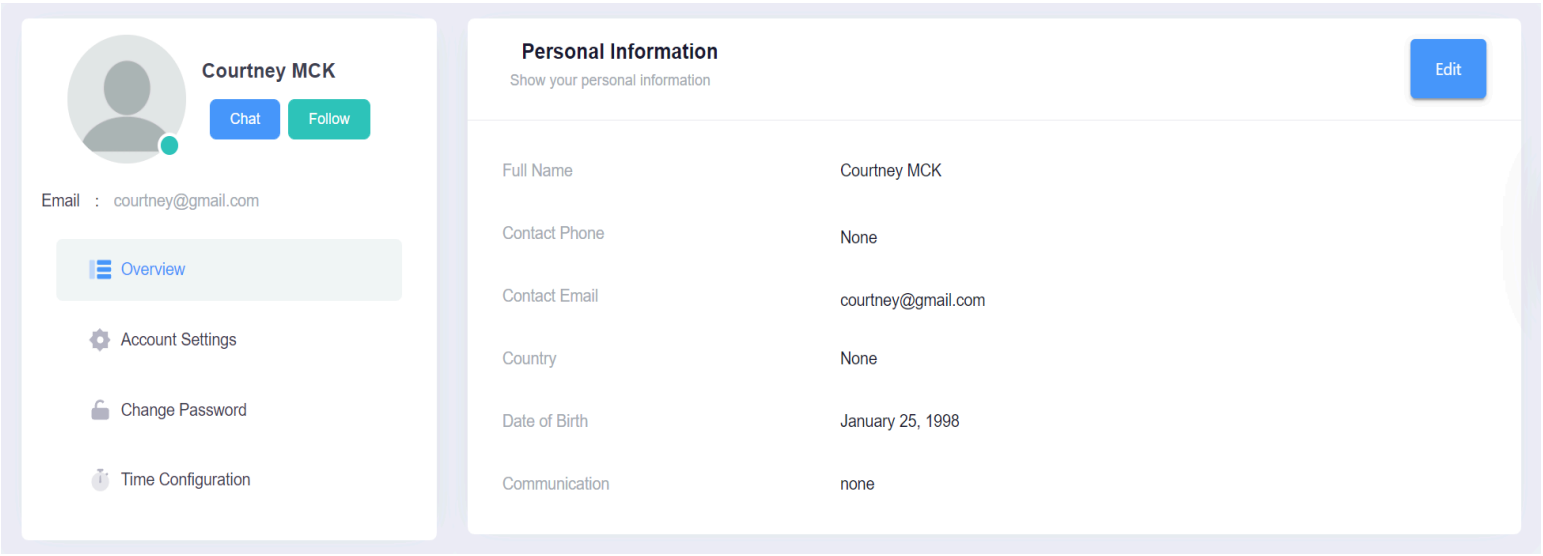

- Profile

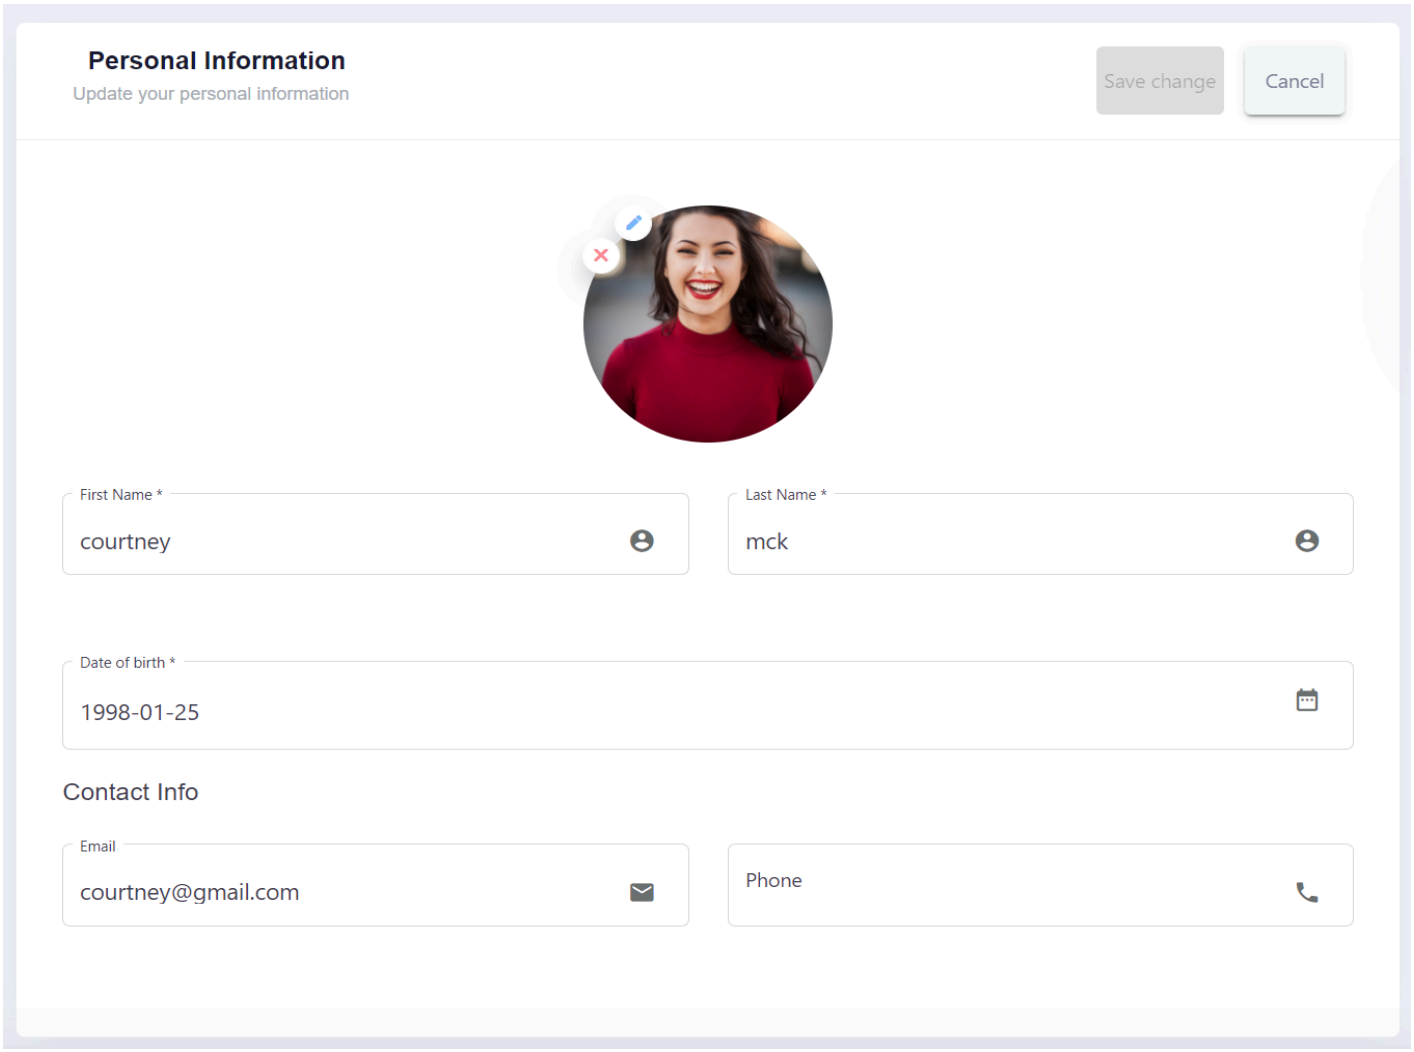

In this section the user can view his personal information and edit them while also managing his account settings.

1. Overview

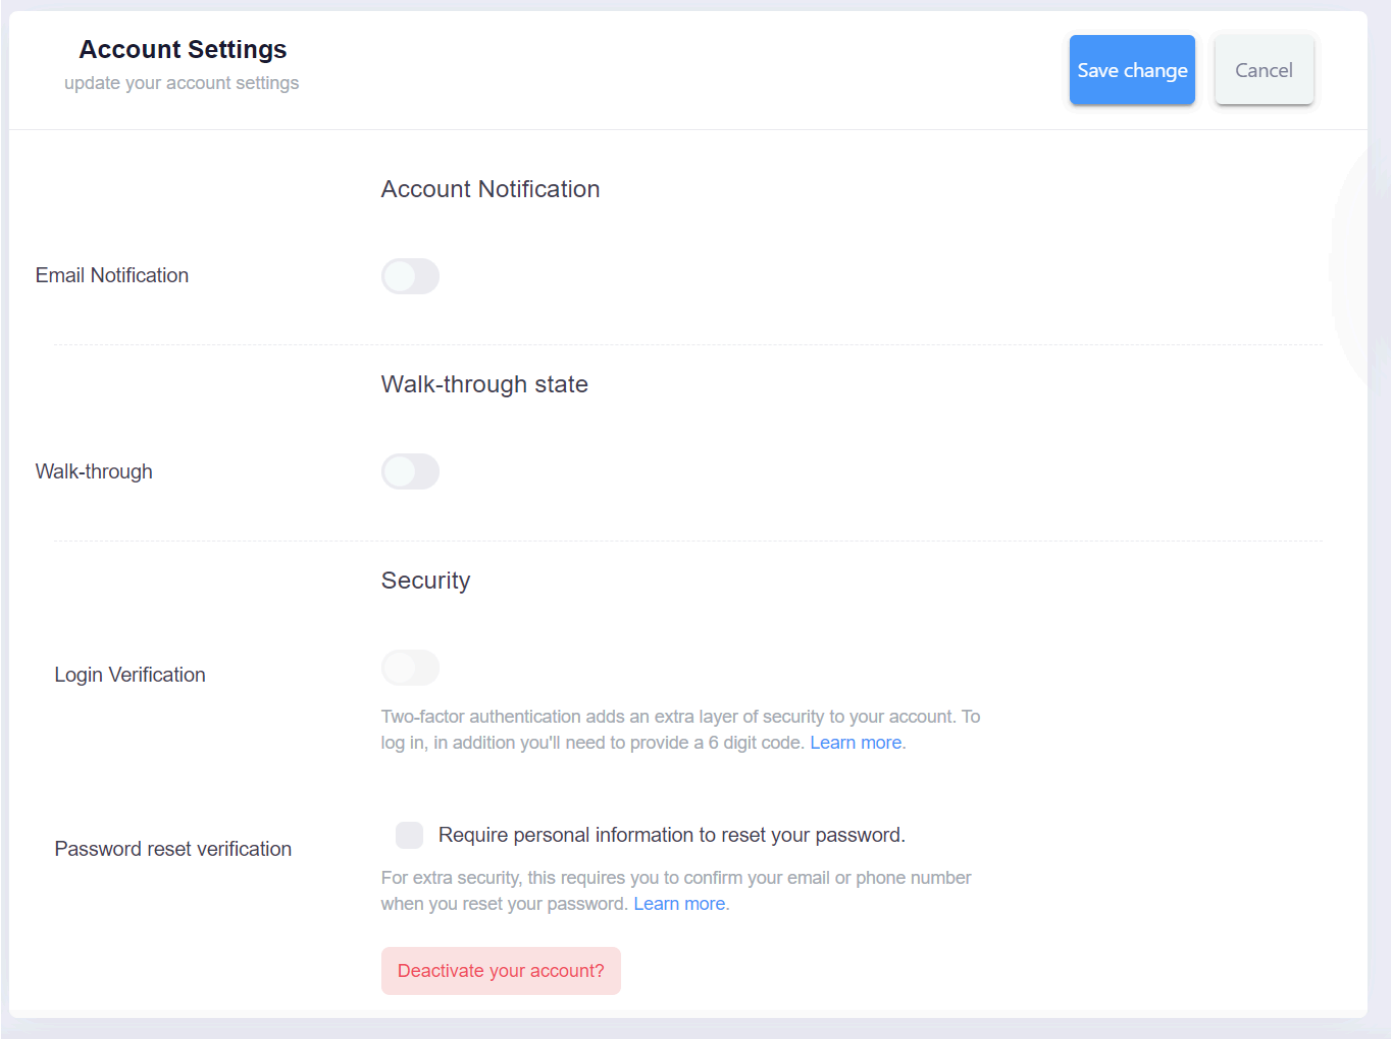

The recipient can edit his personal information or add more information like phone and profile picture.

2. Account Setting

(4)

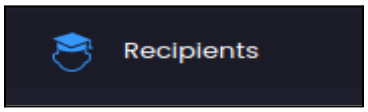

(5)

In the dashboard page the organization’s admin will find : the number of recipients in his organization, unsigned, signed and issued certificates of his recipients (1), total of certificates (2), total of recipients by group (3), his recent activities (4) and the total of certificates by group (5).

2. Sections

- Manage recipients

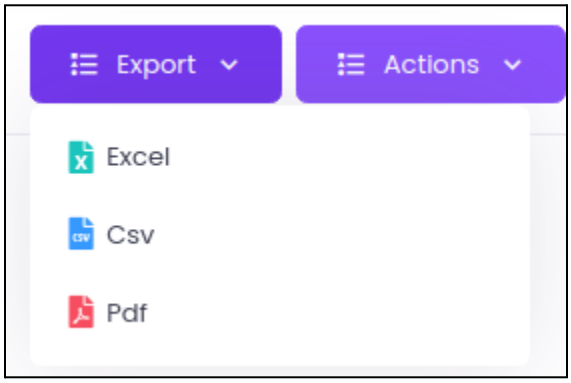

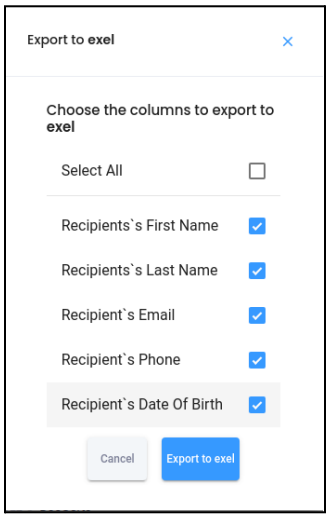

In this section the user will create/upload/invite new recipients, as well as managing the existing ones.

In the Listing window the user can always apply search to the displayed data. The user also can export the recipient's information as an Excel/Csv/Pdf file.

- Listing recipients

The listing of recipients will provide further details on each recipient including the first name,last name, email, phone, date of birth, a list of assigned categories with status and the actions column which includes the assign ,edit and delete buttons.

The state of the category depends on the recipient fields in it.

The category is active if all the recipient's fields are filled otherwise the category's state will be pending.

The organization can fill the recipients fields to change its state:

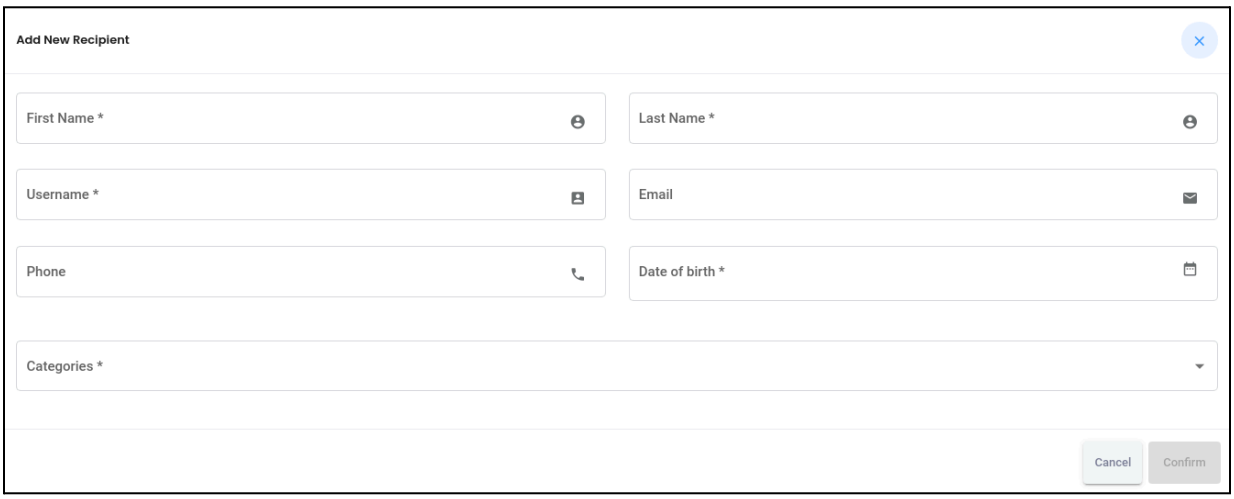

+	The **assign** button will allow the user to affect new categories to a specific recipient.

- Create new recipient

In this section the issuer can add new recipients to his group, and assign them to certain categories .

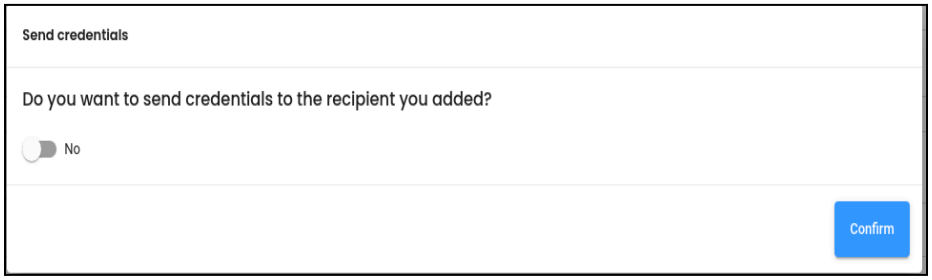

The user will be prompted to enter several information: recipient's personal details (first name, last name, username, email,phone and date of birth), and the category(s).

All the fields are required except for the email and phone , the user can choose to enter one or both.

The submit button will remain disabled until the user fills all required fields.

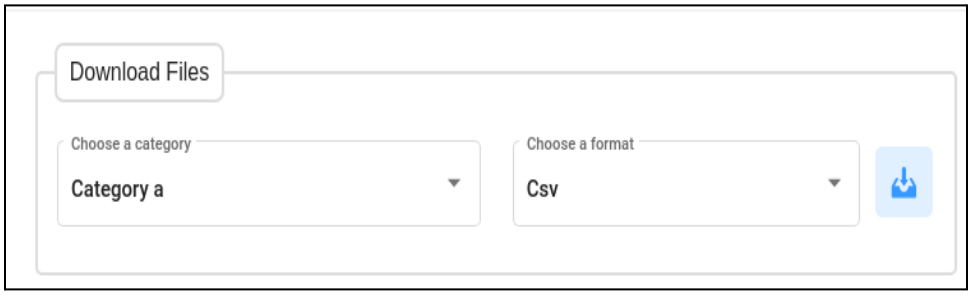

After form submission the issuer can choose to send credentials to the added recipient or not.

- Upload multiple recipients

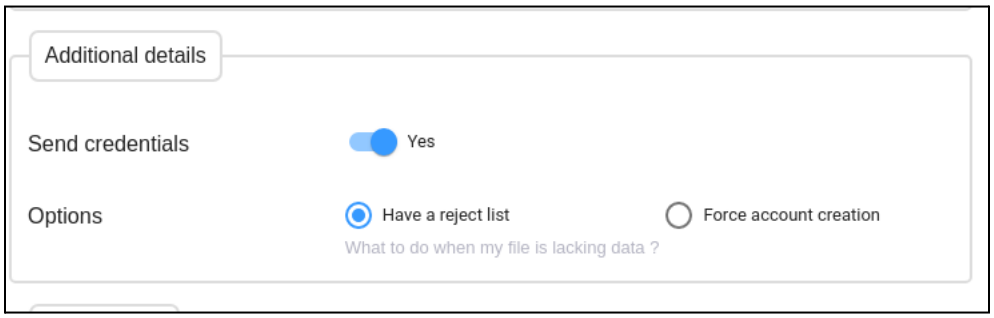

In this section the organization can upload a list of recipient information.

First he has to choose a category and file format, and then download an example file with the recipient's personal fields and category recipients fields.

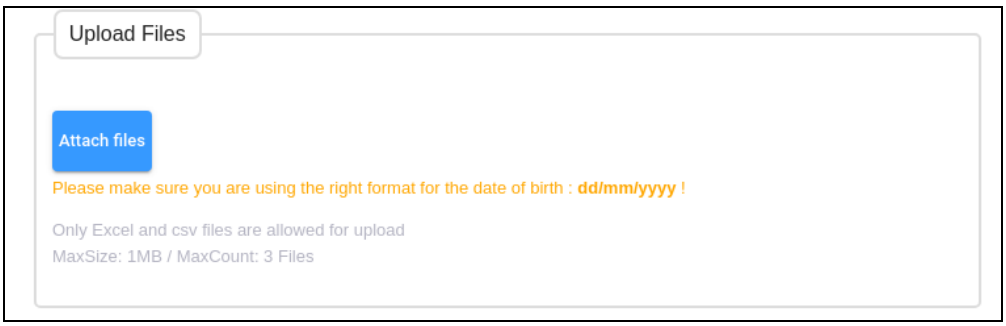

Additional details section:

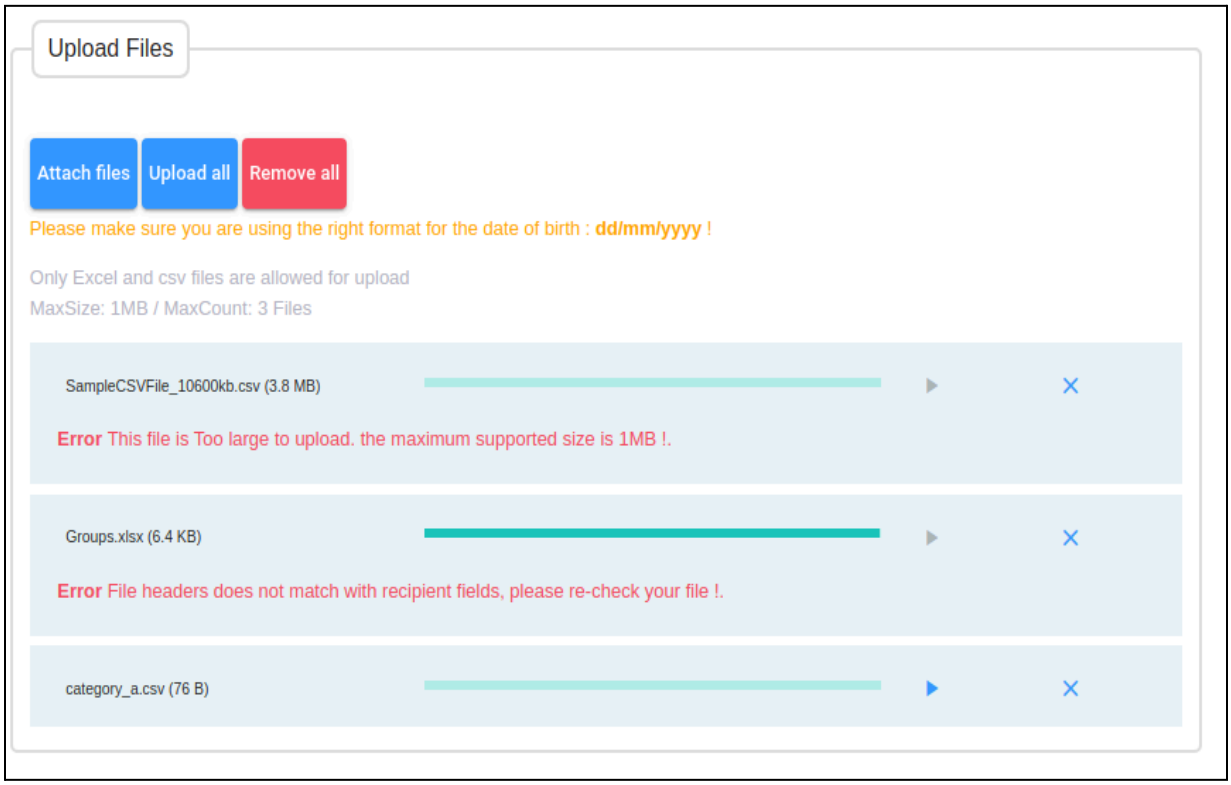

Send credentials: here the user chooses to send the credentials to the uploaded recipients or not.
Have a reject list : in case of missing information the app will provide a file with the rejected recipients list and the reject reason.
Force account creation : in case of missing data the app will generate random data and provide a file with the created recipients and the generated data.

The user has to fill the file with the recipient's information and attach them in order to complete the upload process.

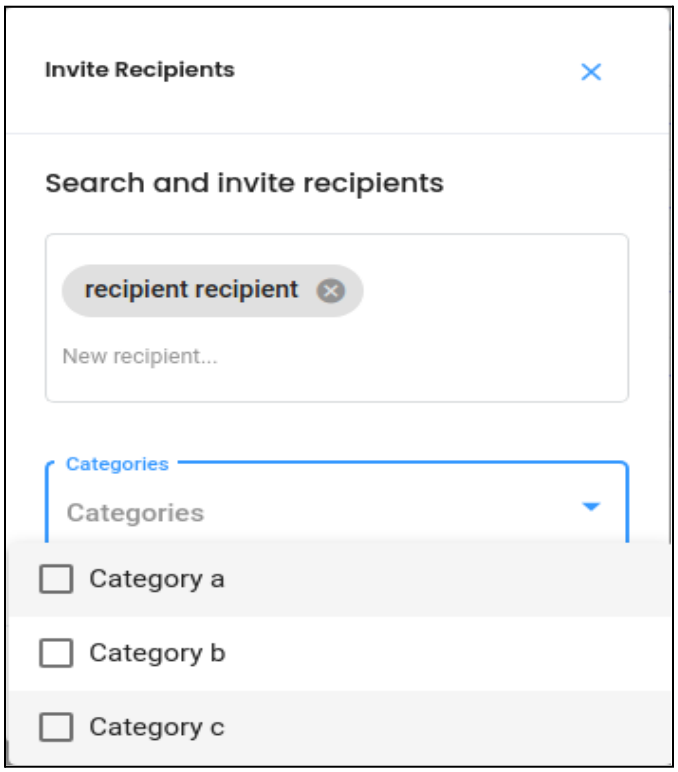

3 is the maximum number of files that can be uploaded at once.
1 Mb is the maximum size that each file must not exceed.
After attaching the files the system will check if the headers of the uploaded file and the headers of the generated file.

- Invite recipients

In this section the user can send invitations to different recipients to join his group.

He can invite one or more recipients to join a category or multiple categories on his group.

First the user has to search for the recipients with first name or last name.

Then he selects the recipients from the displayed list.

After he selects the categories, and then submits the form.

The invitation will remain pending until it gets accepted by the concerned recipient.

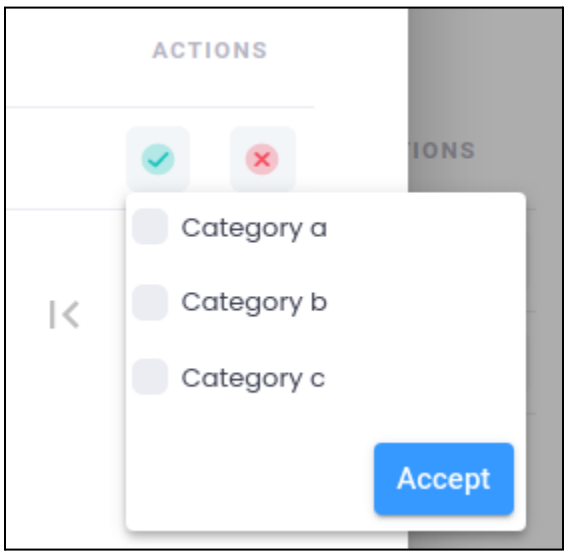

- Manage recipients requests

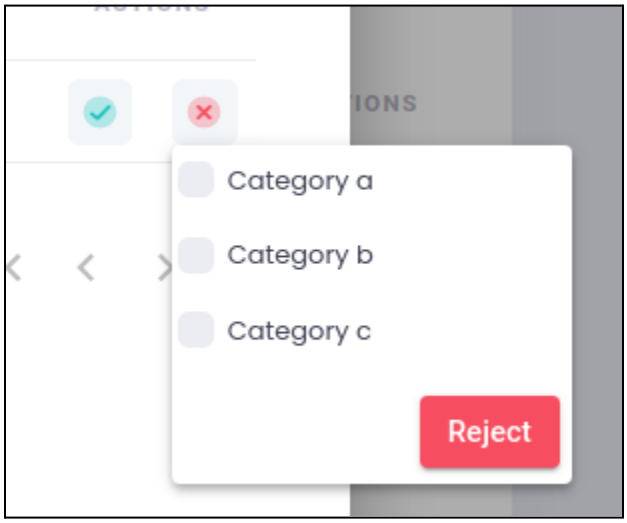

Listing requests: in this section the issuer will find the received requests with the concerned recipients information, as well as the accept and reject actions.
The user can either accept or reject the received request.

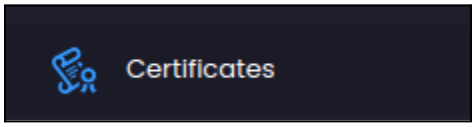

If the request concerns more than one category the organization can select the category or categories then accept/reject the request.

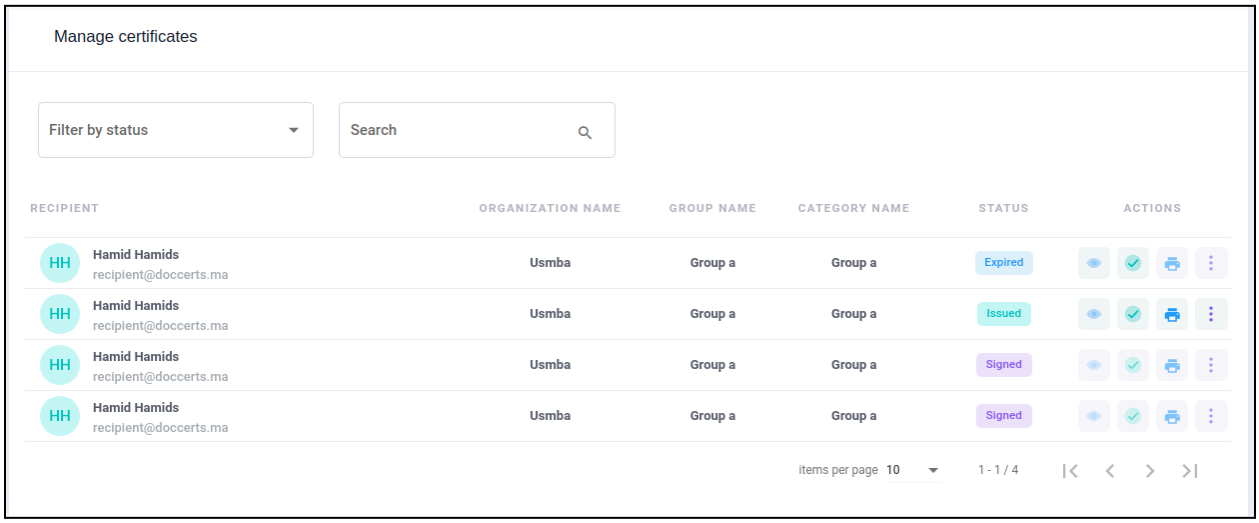

- Manage certificates

- Listing / manage certificates

Listing certificates page provides further details on each certificate including the recipient information (first name, last name, email), the organization name, the group name, the category name, the status (created, signed, issued, revoked and expired) and the actions column which includes the view, print, verify and share certificate.

The organization can always apply a search/filter on the displayed data.

- View certificate

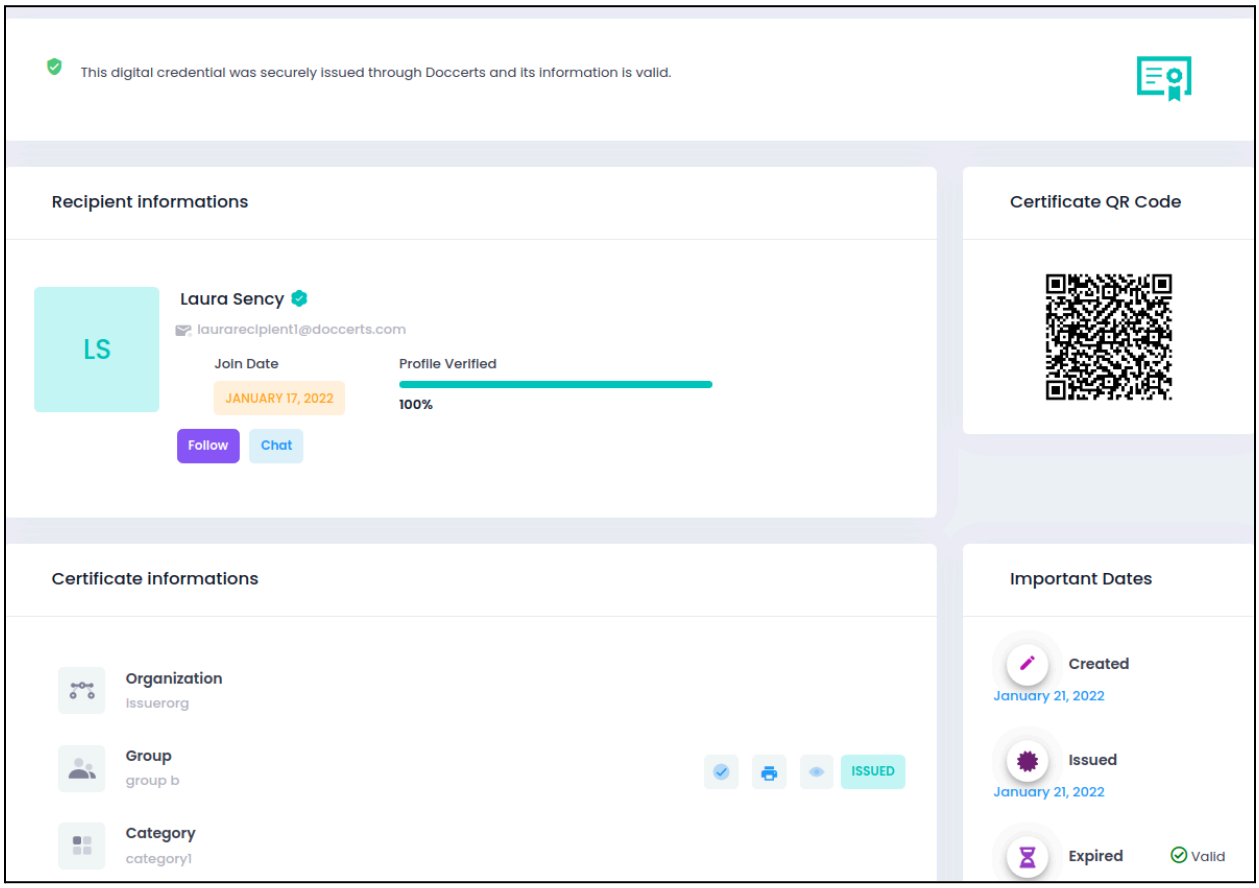

If the user wants to view a certificate, click  on the view button.

When you click, you can see your recipient certificate.

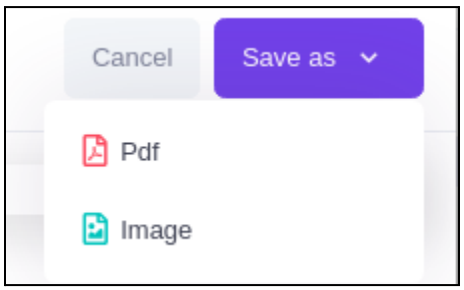

- Verify certificate

he can also verify a recipient's certificate, by clicking on  the "Verify certificate" button.

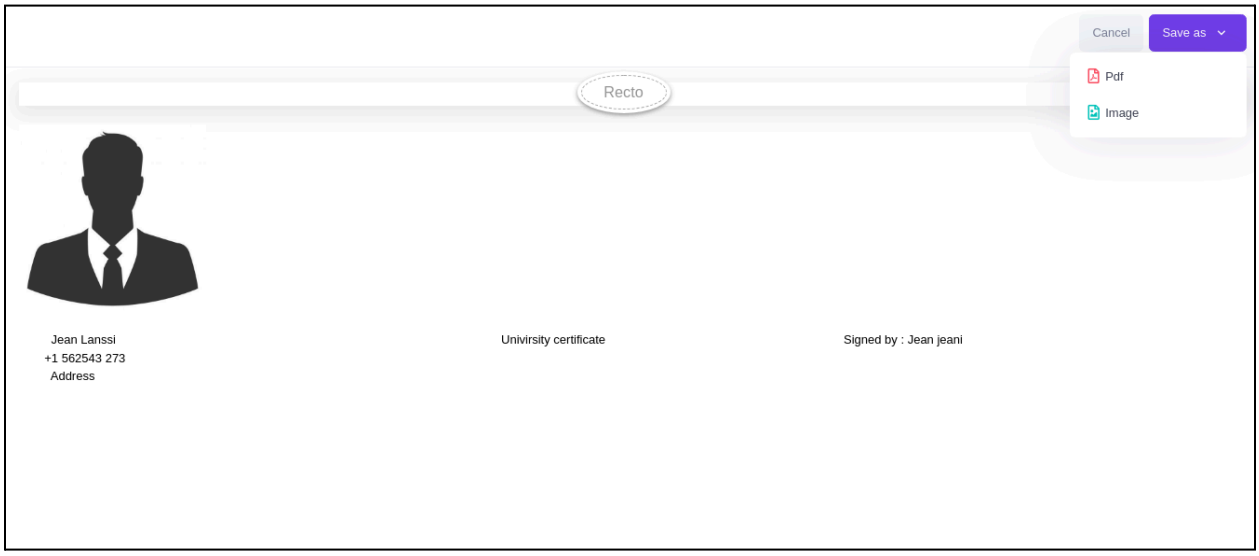

- Print certificate

To print a certificate he can use the "Save as" button.

he can choose between “Pdf” or “Image”.

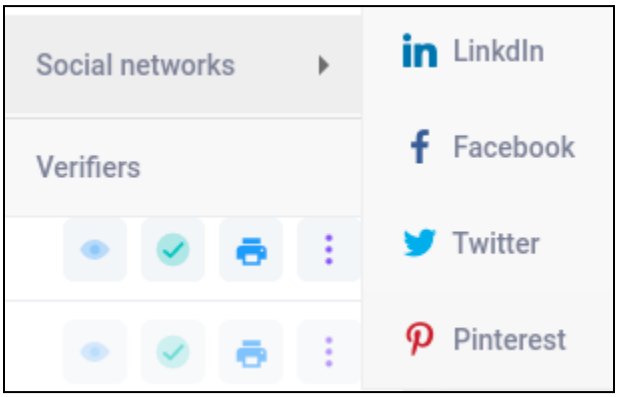

So if he clicks on “Pdf” or “Image” he can get the certificate, as shown in the next figure.

- Share certificate

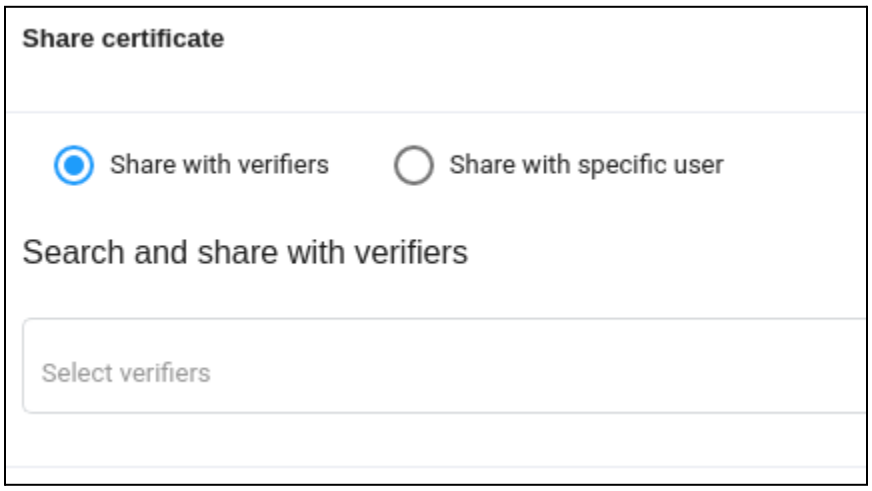

Two options :

- Share with social networks.

If he chooses to share with Facebook, he must connect to his account and share the certificate with his friends.

- Share with verifiers.

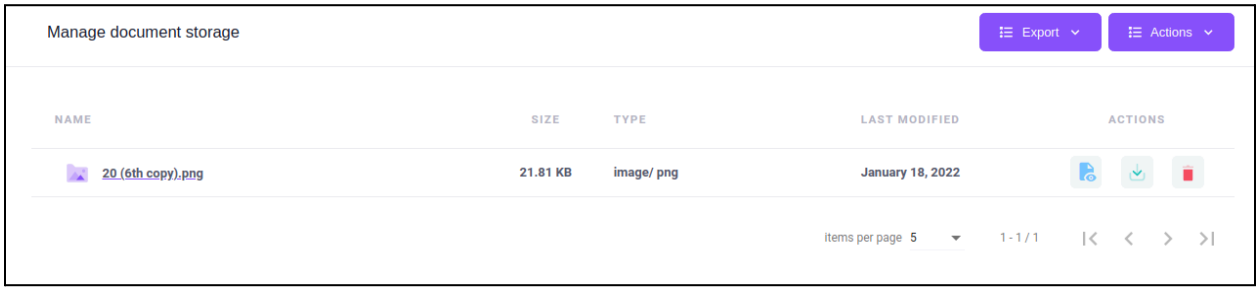

To share the certificate with verifiers or a specific user, he must search for a verifier/user with personal information (first name, last name or email).

• Document storage

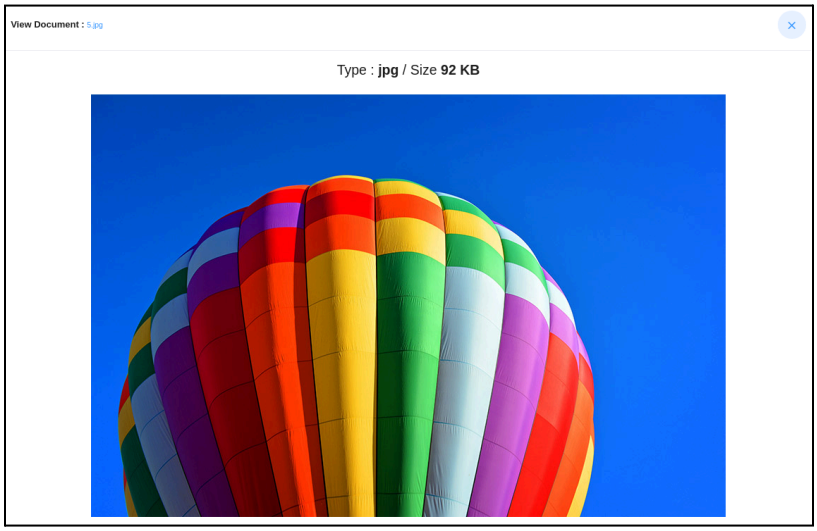

In this area the organization can manage all the uploaded documents/images, these documents can be used for users profile pictures, certificate category fields and recipients fields.

• Listing documents

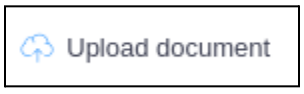

This section provides details about the document: document’s name,size,type,modification date and the actions column which includes view, download, delete document.

View document: the organization can display the document’s content either by clicking on the view button in the actions columns or by clicking on the document's name to open the file in a new tab.

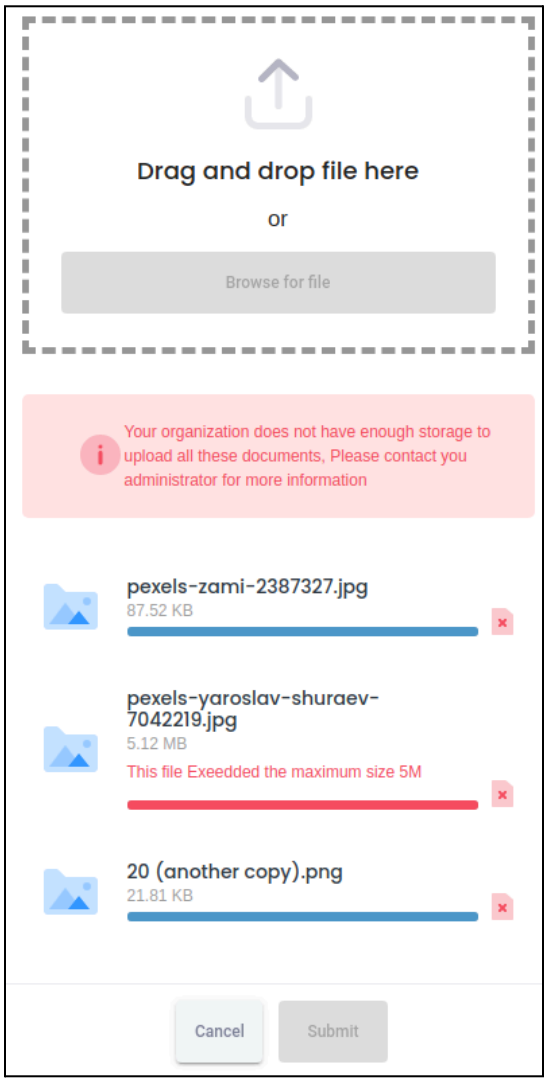

- upload document(s)

To upload a new document(s), the user has to use the “Upload document” button in the actions drop down on the header.

A new popup page will be shown, where the user will be prompted to drag and drop or browse for a file.

The user can upload one or multiple documents.

The section only supports images (png/jpg/jpeg).

5MB is the maximum size that the file must not exceed.

The upload section takes into consideration the organization's storage, so the size of the file(s) should not exceed the organization's storage, otherwise the issuer will not be able to upload the selected documents.

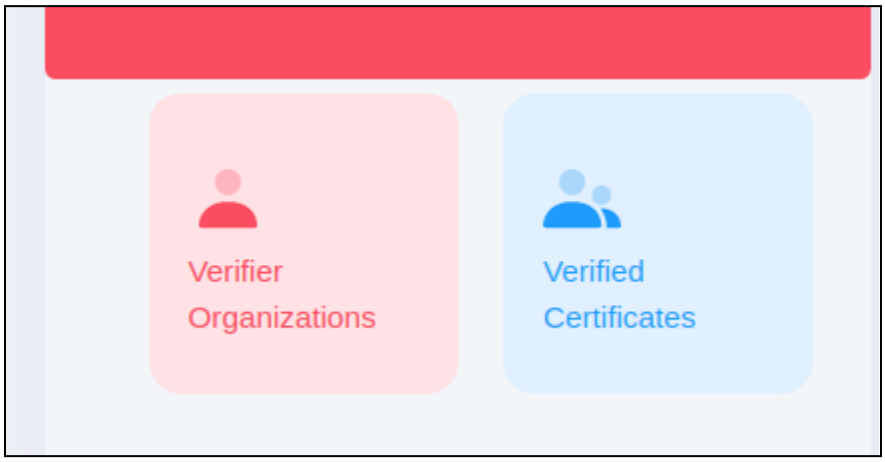

The submit button will remain disabled until all these conditions are satisfied.

Verifier

Verifier is An individual or an entity verifying a document or a certificate issued by an issuer to a recipient.

1. Getting started

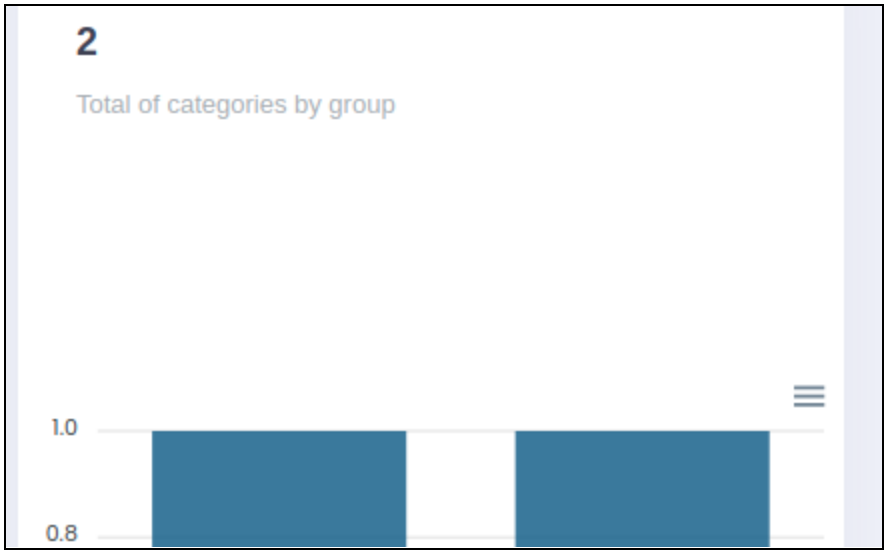

Once logged in, the verifier will see a comprehensive dashboard providing information on different aspects of the application, for instance number of verifier organizations and verified certificates (1), also the total of certificates than can be verified by the current verifier (2), total of categories by group (3) and finally in the bottom you can see your recent activities (4).

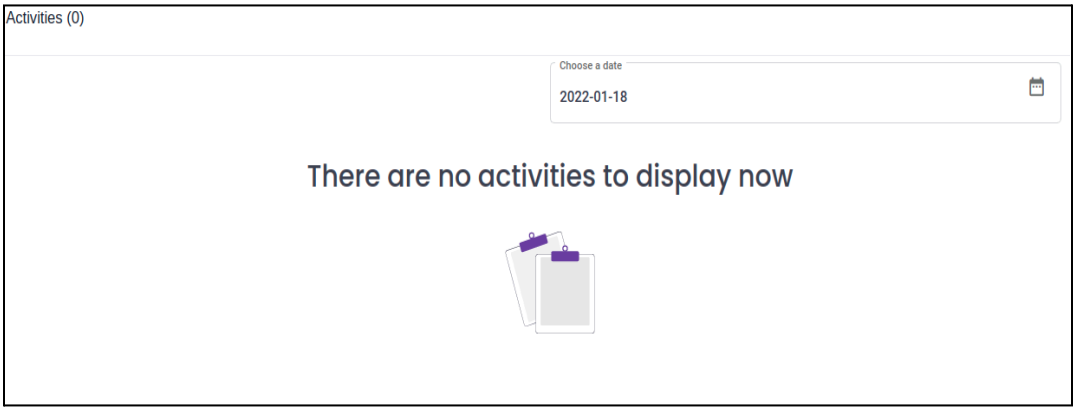

(1)

(2)

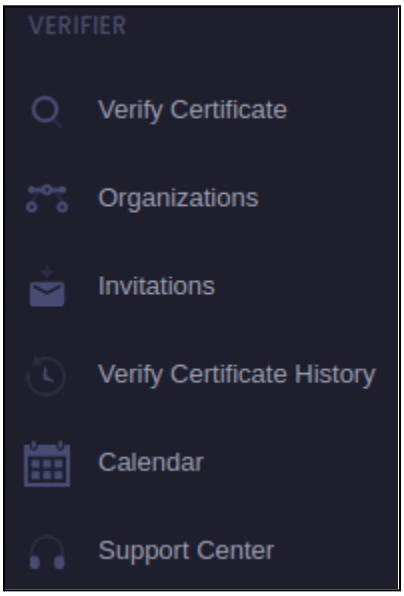

(3)

(4)

2. Sections

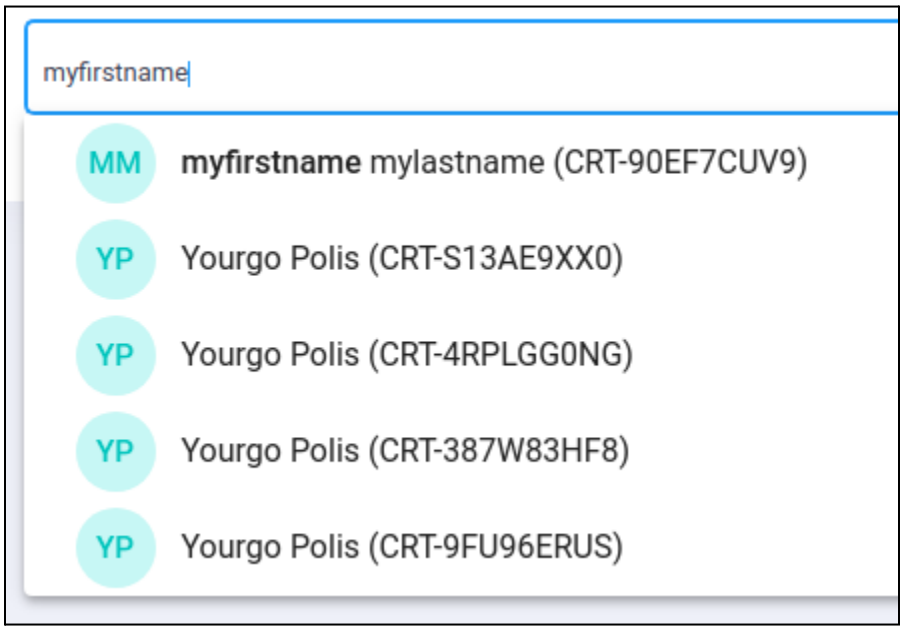

- Verify certificate

  - Search by certificate ID or recipient information

To search for a certificate the user can search by certificate ID (2) or recipient information (1).

(1)

(2)

  - Upload certificates

The user can also use “Upload certificates” by clicking on “Actions” > “Upload certificates” to find many certificates by certificate ID and/or recipient information.

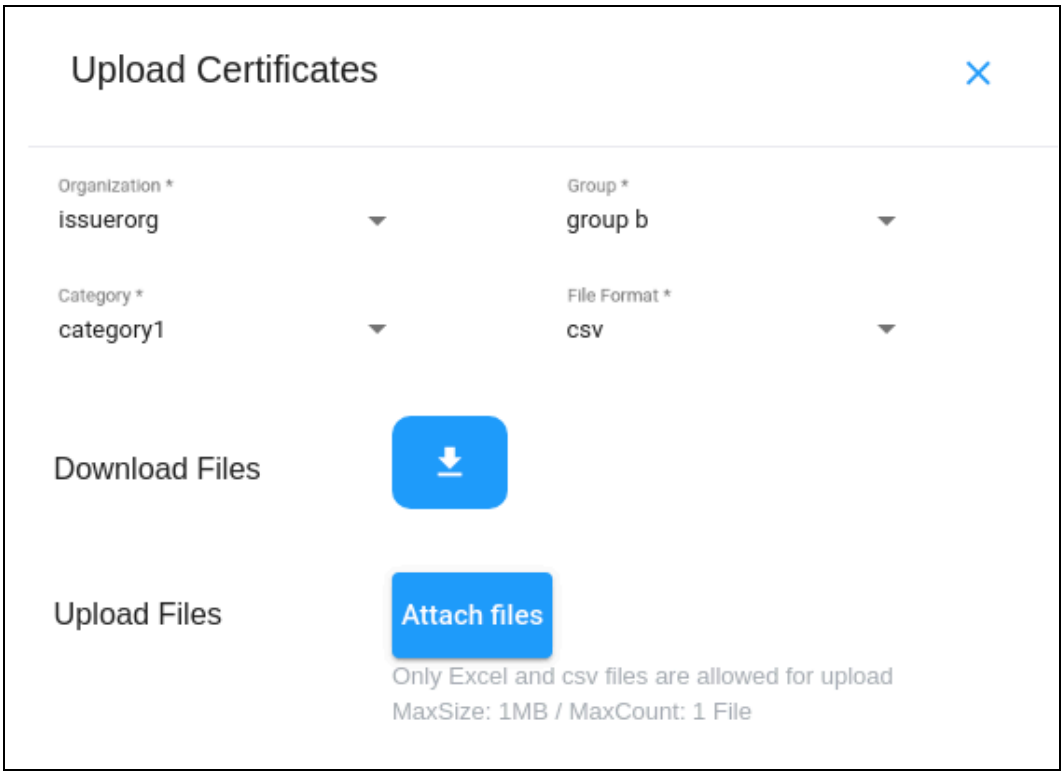

To search for many certificates he can follow this steps :

1- Click on the “Upload certificates” button.

2- Choose the issuer organization.

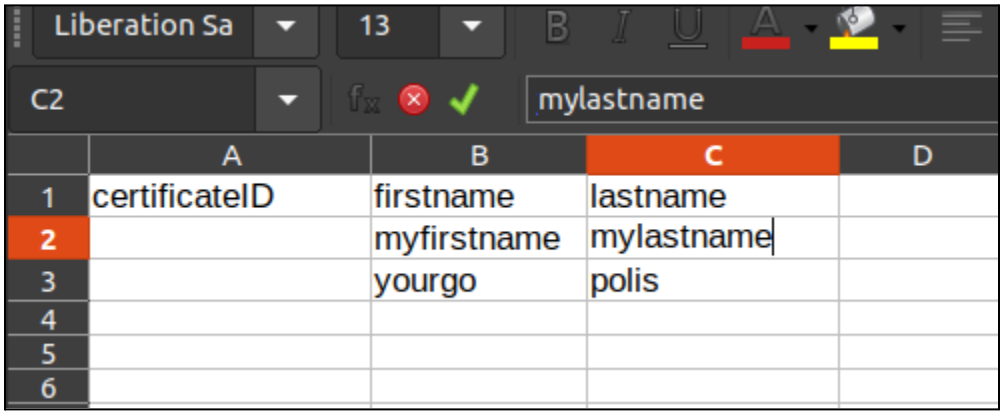

3- Choose the group, category and file format.

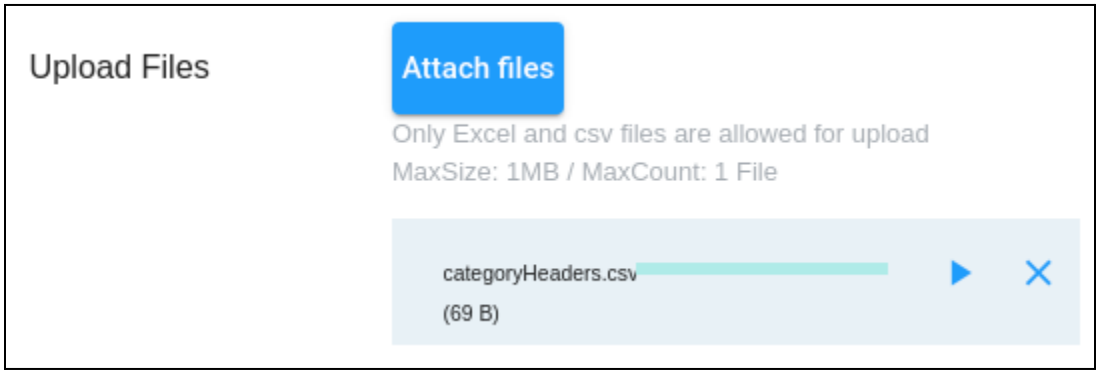

4- Click on the download button to get an empty file with headers.

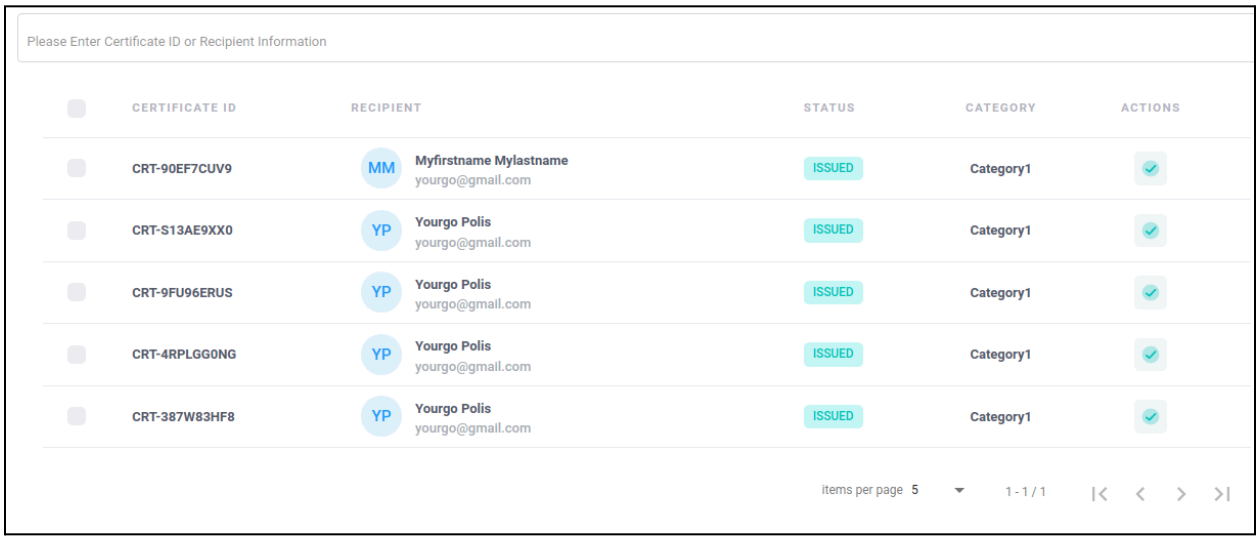

5- Fill the downloaded file.

6- Save and upload this file by clicking on “Attach files” button and click on the **play symbol**.

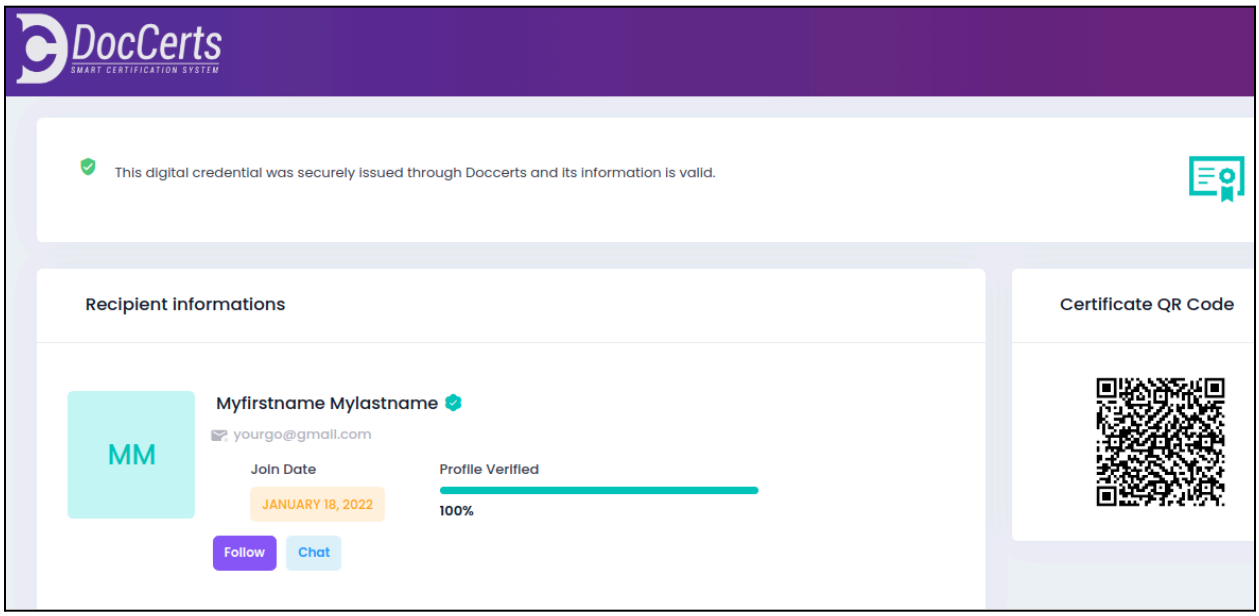

7- Finally he will get the certificates that you search for.

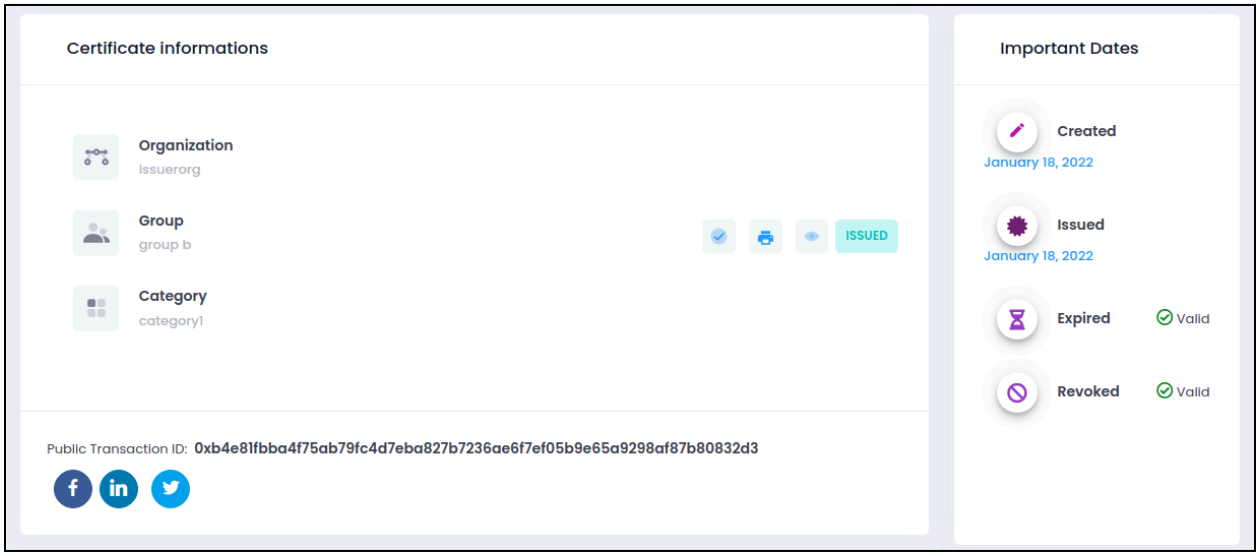

- Verification steps

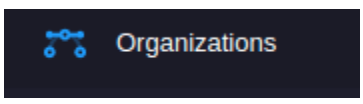

To verify a certificate, he has to click on the verify button. 

And he will get like this verification page.

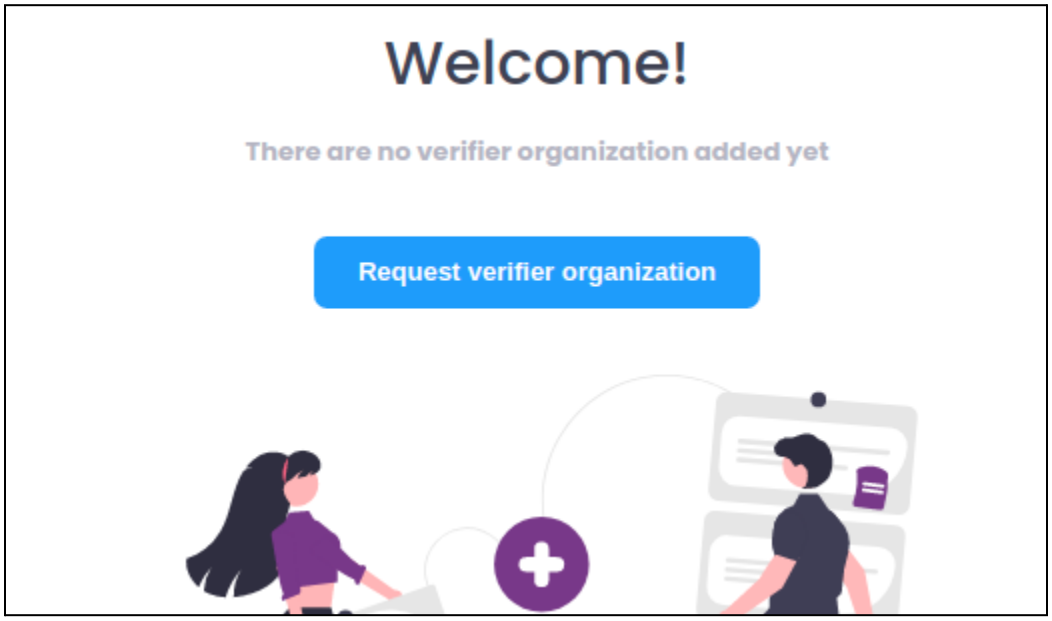

- Organizations

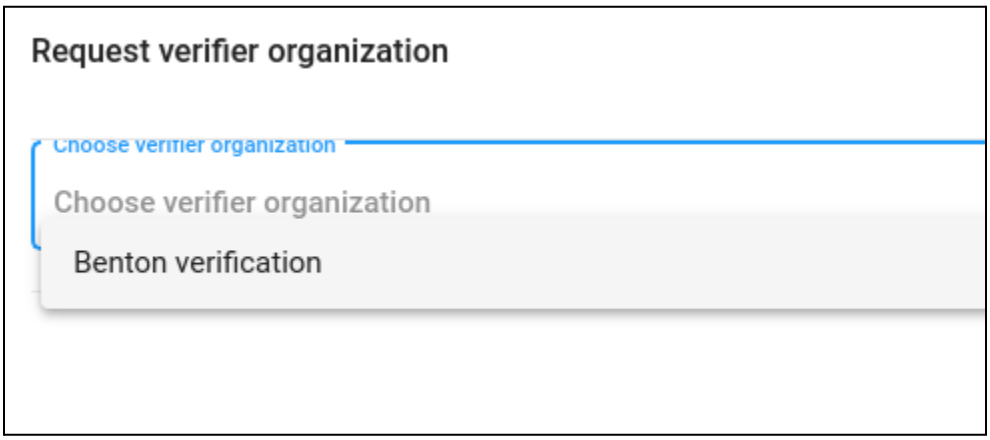

In this section the user can send requests to any verifier organization.

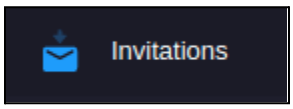

To send a request, he has to click on the “Request verifier organization” button.

Then select the verifier organization and click on “Send request”.

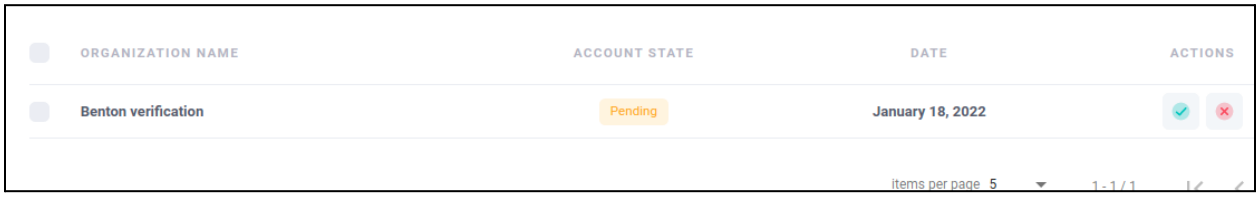

After that, he must wait for the organization's response.

- Invitations

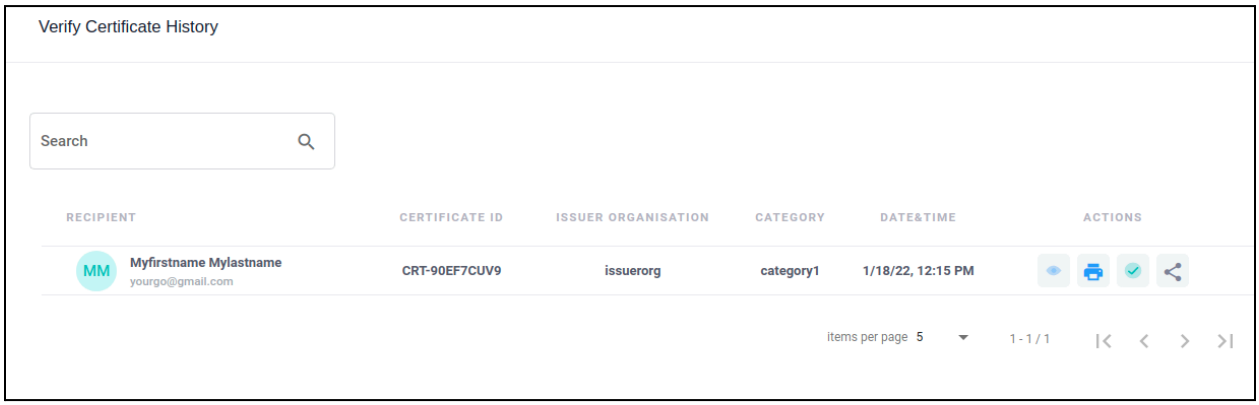

Here the user can get all your own invitations,

He can accept or reject any invitation.

- Verify certificate history

In this section the user can see all verification operations history.

He can view, print, verify or share certificate in social media,

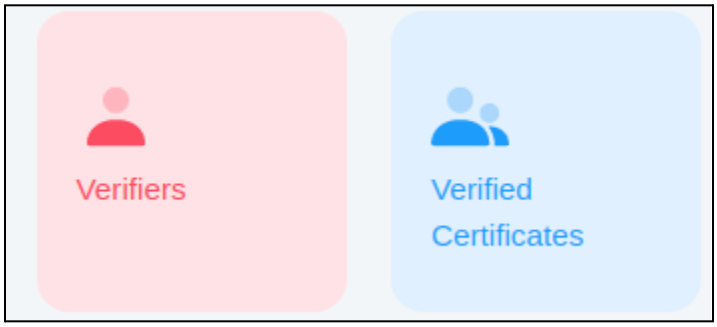

He also has the possibility to search for a certificate.

Verifier organization

Verifier organization is an institution comprising one or more verifiers, the main role of this organization is verifiers management. For example : create a new verifier, invite verifier, upload verifiers and respond to verifiers requests.

1. Getting started

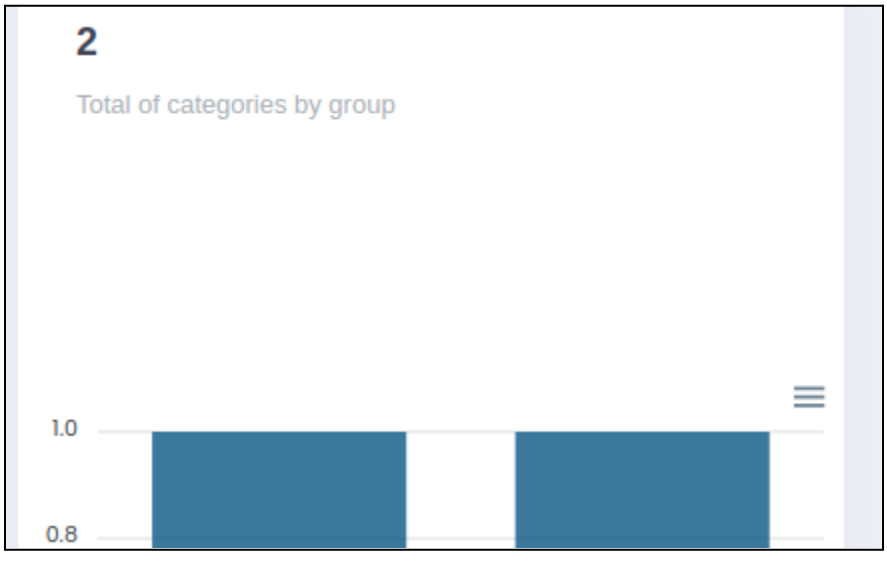

Once logged in, the verifier organization will see a comprehensive dashboard providing information on different aspects of the application, for instance number of verifiers and verified certificates (1), also the total of certificates than can be verified by the organization verifiers (2), total of categories by group (3) and finally in the bottom you can see your recent activities (4).

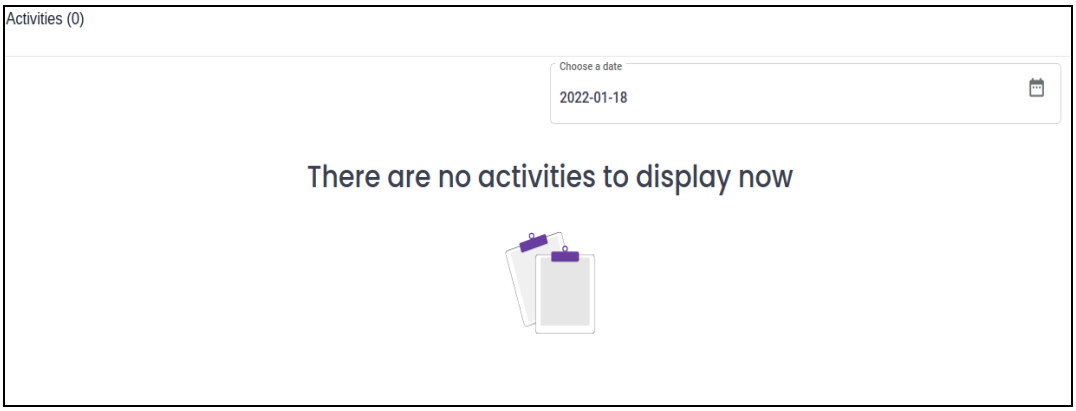

(1)

(2)

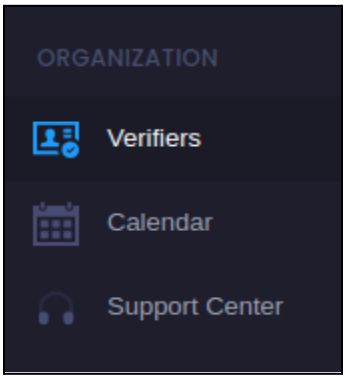

(3)

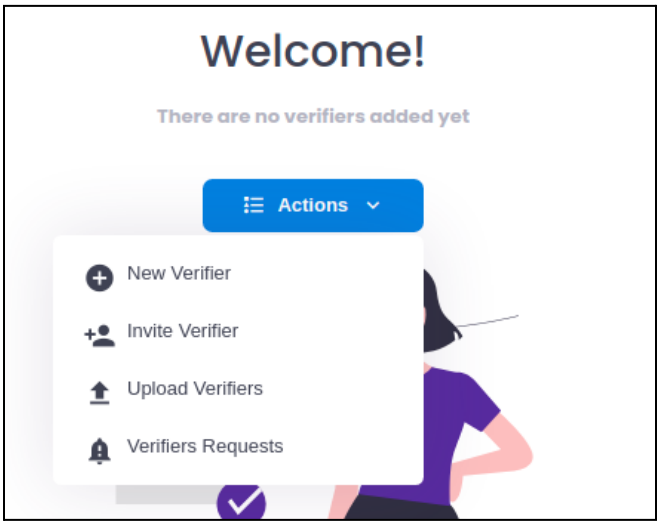

(4)

2. Sections

- Verifiers

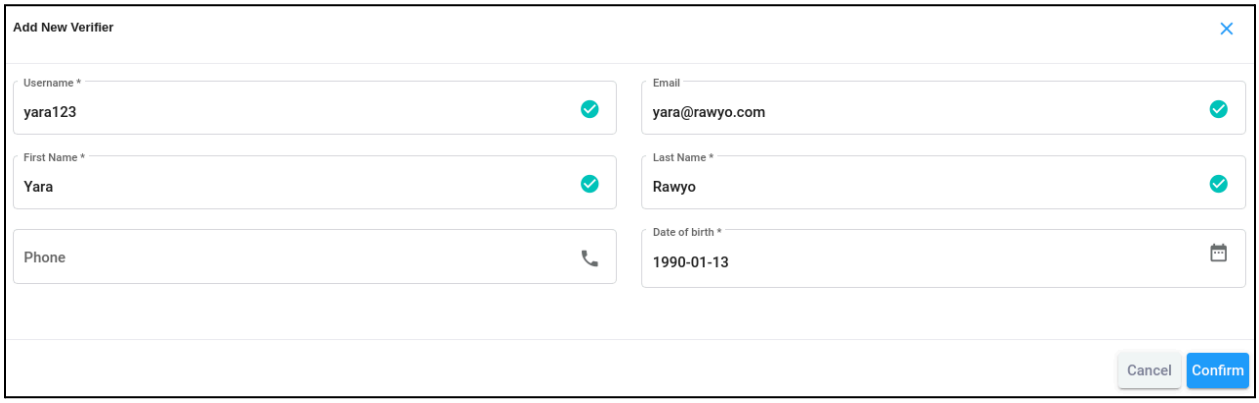

we have 4 features in “Actions” list :

- Upload verifiers

In this section the verifier organization's admin can upload a list of verifier information.

First he has to choose the file format, and then download an example file with the verifier's personal fields.

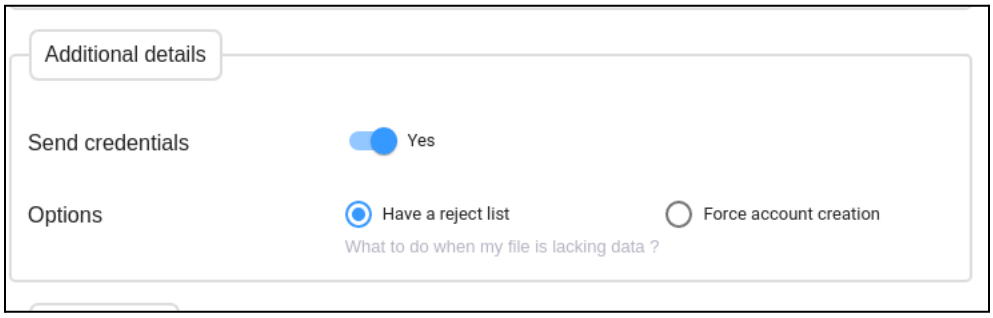

Additional details section:

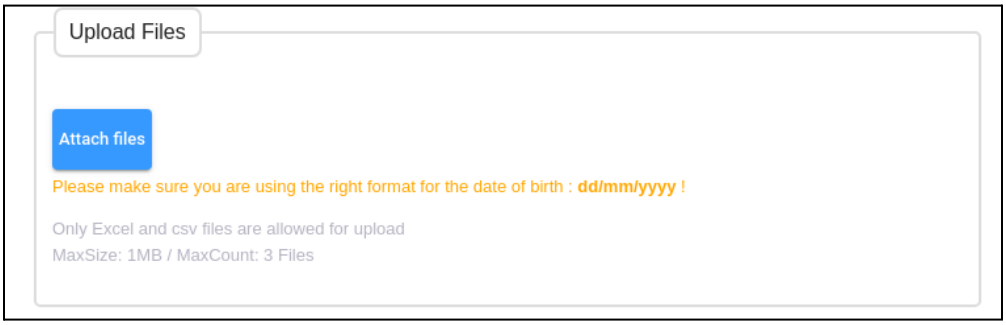

Send credentials:here the user chooses to send the credentials to the uploaded verifiers or not.

Have a reject list : in case of missing information the app will provide a file with the rejected verifiers list and the reject reason.

Force account creation : in case of missing data the app will generate random data and provide a file with the created verifiers and the generated data.

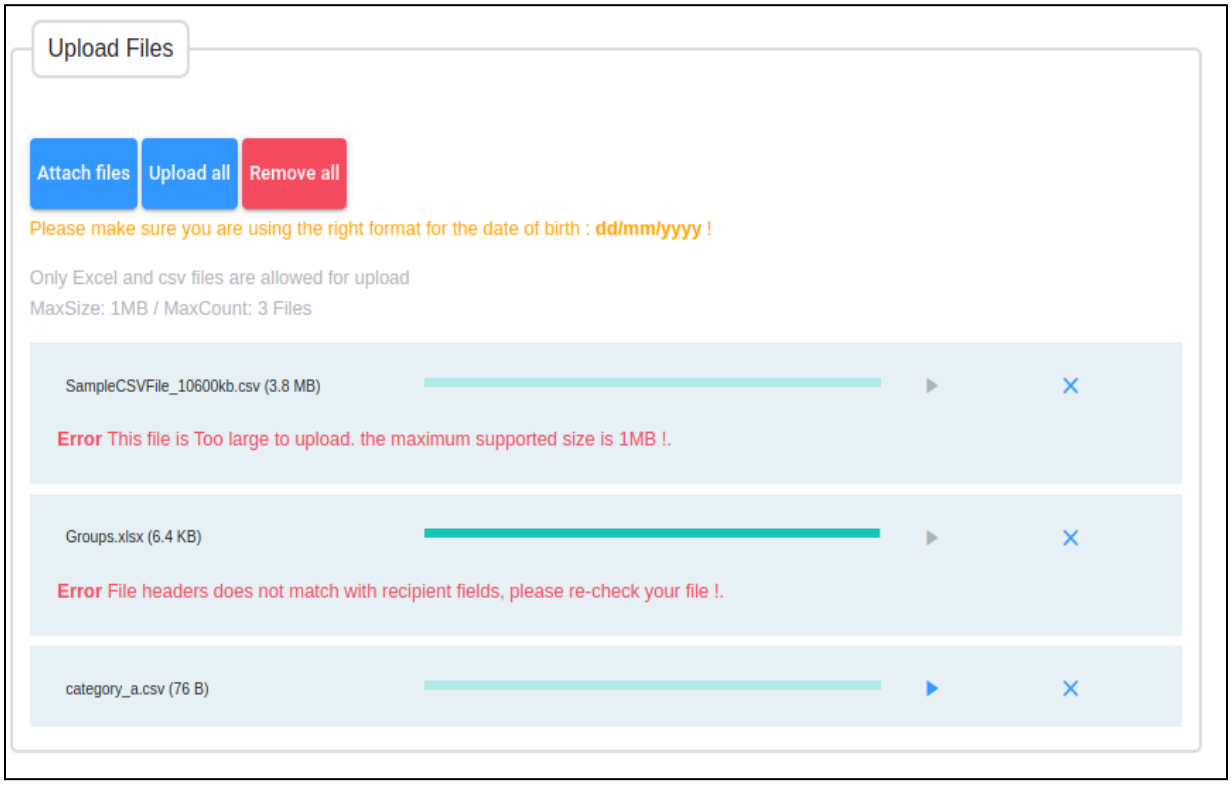

The user has to fill the file with the verifier's information and attach them in order to complete the upload process.

3 is the maximum number of files that can be uploaded at once.

1 Mb is the maximum size that each file must not exceed.

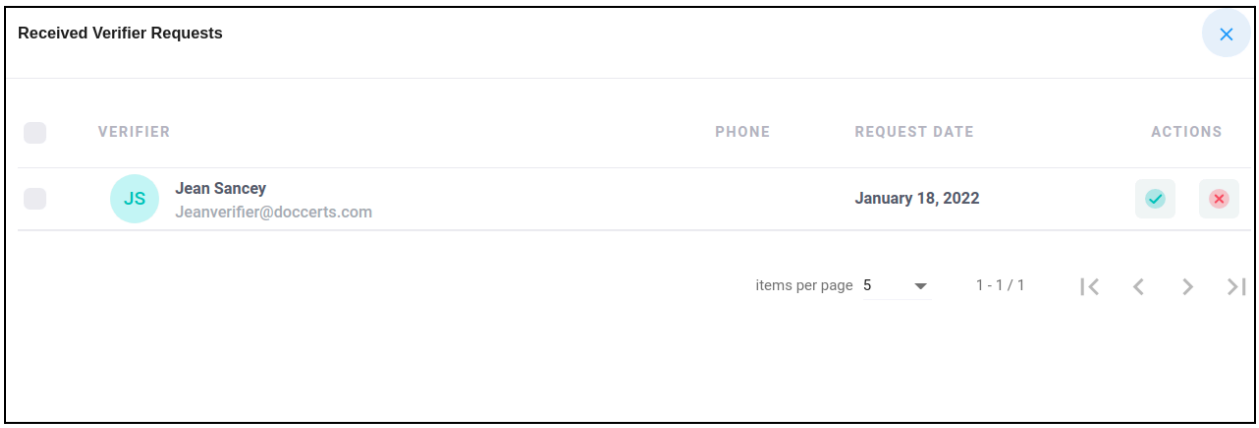

After attaching the files the system will check if the headers of the uploaded file and the headers of the generated file.

- Verifiers requests

Listing requests : in this section the verifier organization will find the received requests with the concerned verifiers information, as well as the accept and reject actions.

The user can either accept or reject the received request.

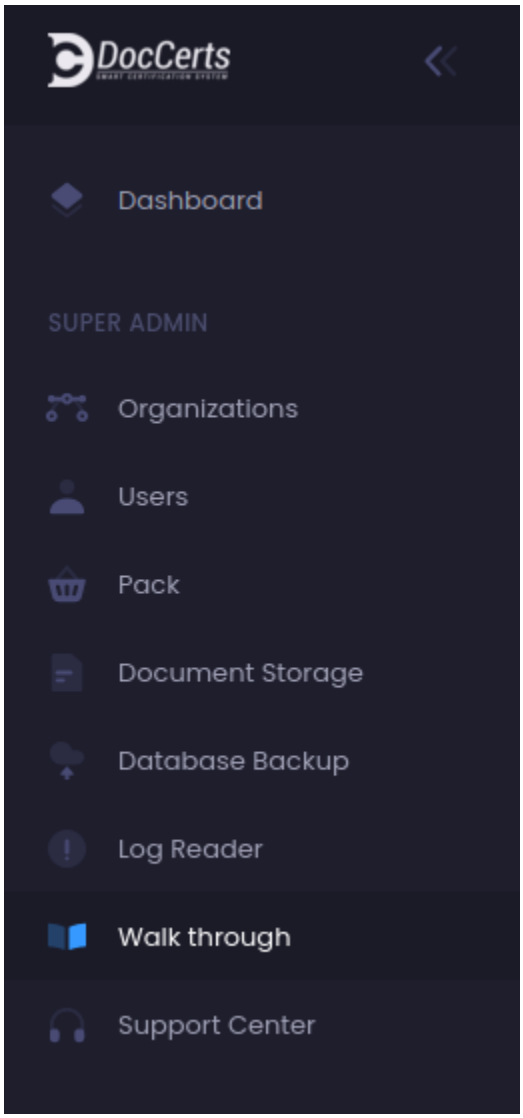

After accepting the request, you can see this verifier in your verifiers list.

You can also *update* or *delete* him.

SuperAdmin

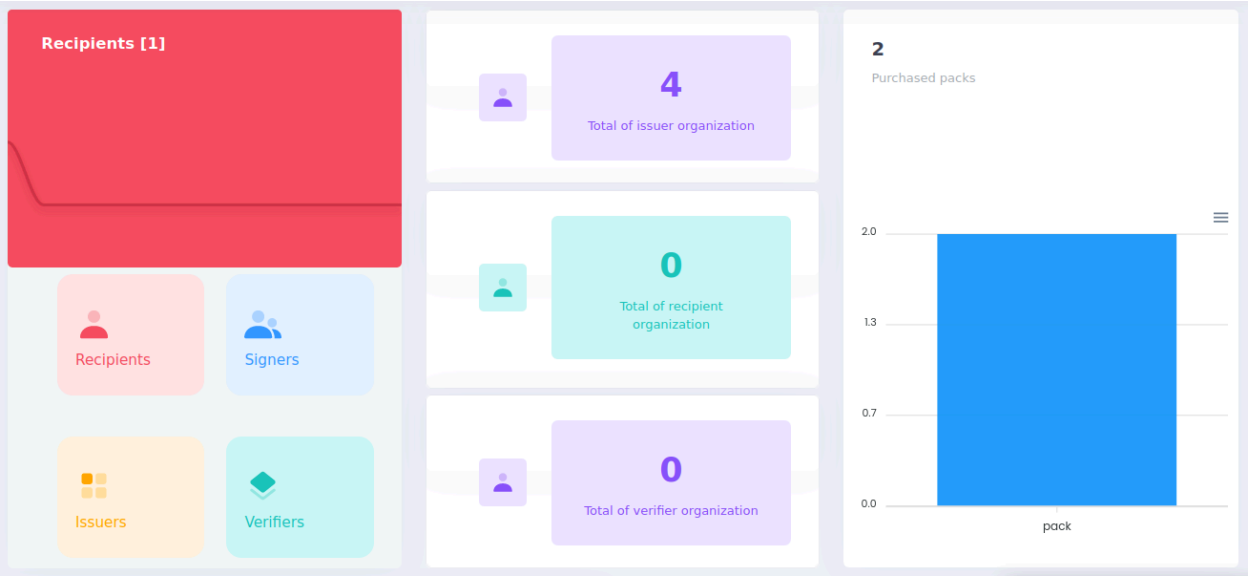

The super Admin has access to multiple features as shown in the sidebar below

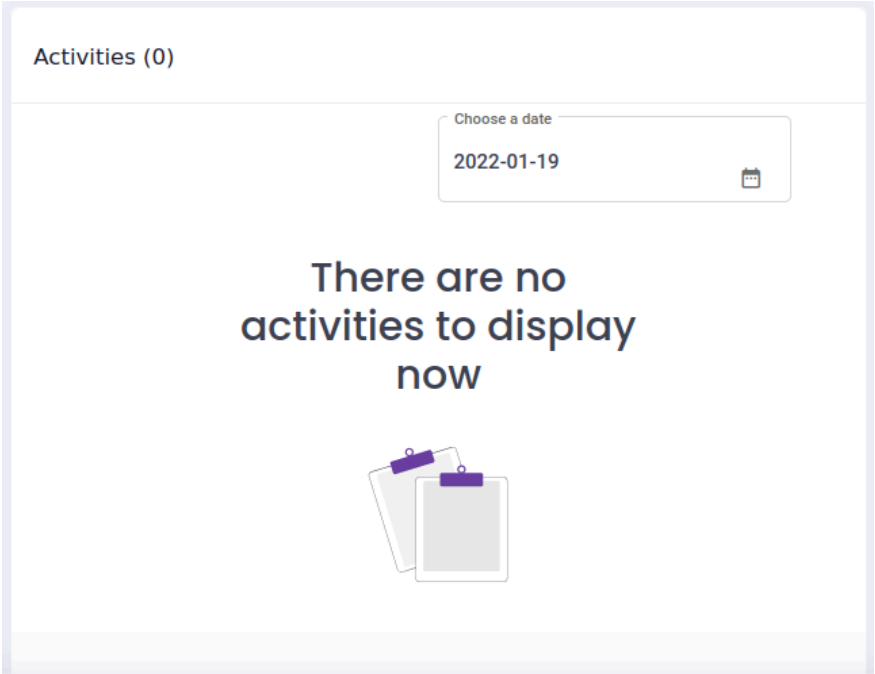

1. Dashboard

Once logged in, the super Admin will see a comprehensive dashboard providing information on different aspects of the application, for instance number of Recipients,Signers, Issuers and Verifier as well as the total of Issuer organizations ,

Recipient organizations and Verifier organizations, and Also the number of purchased packs

In the bottom section of the dashboard the super Admin can also see his most recent activities.

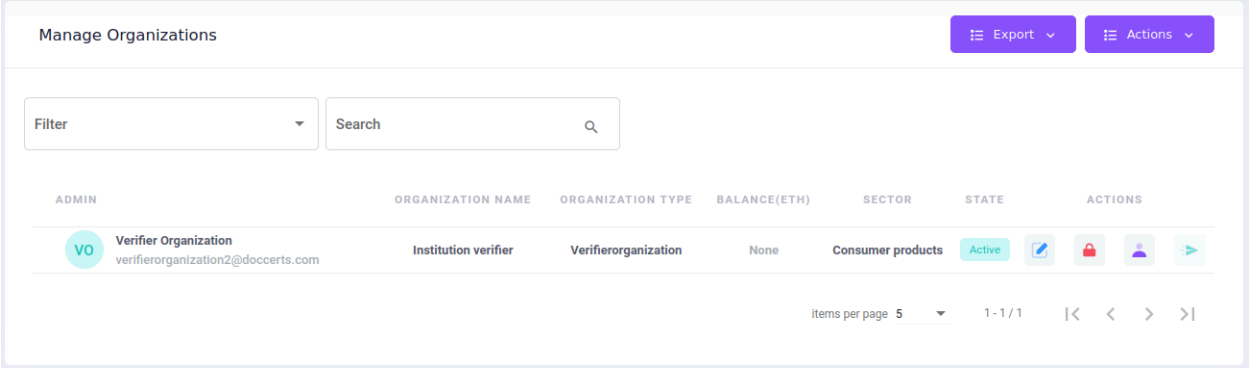

2. Organizations

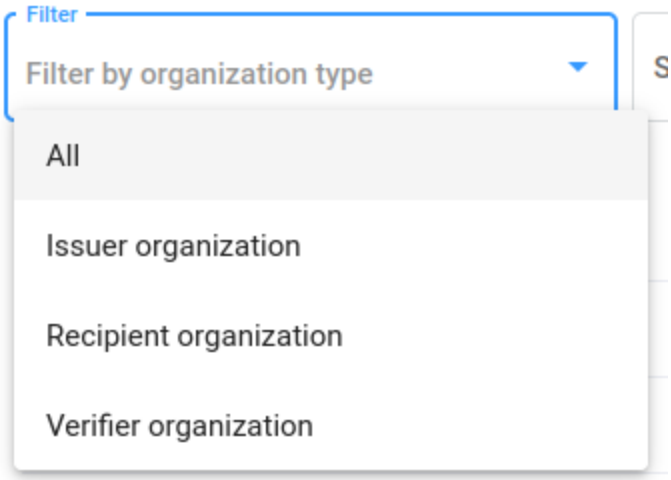

Here the super Admin can manage all organizations accounts.

- ## Listing organizations

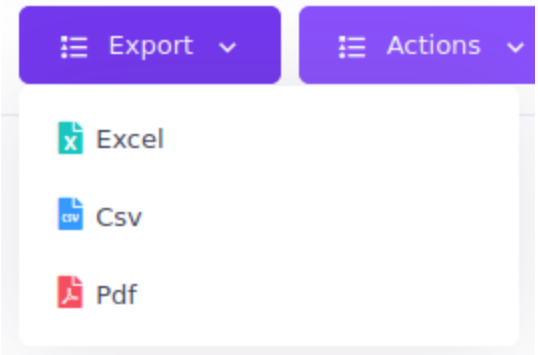

The super Admin is able to list all the current organizations data such as : organization admin(first name, last name and email), organization name, organization type, balance, sector, state as well an action column which includes the update and block organization button as well as the impersonate account button.

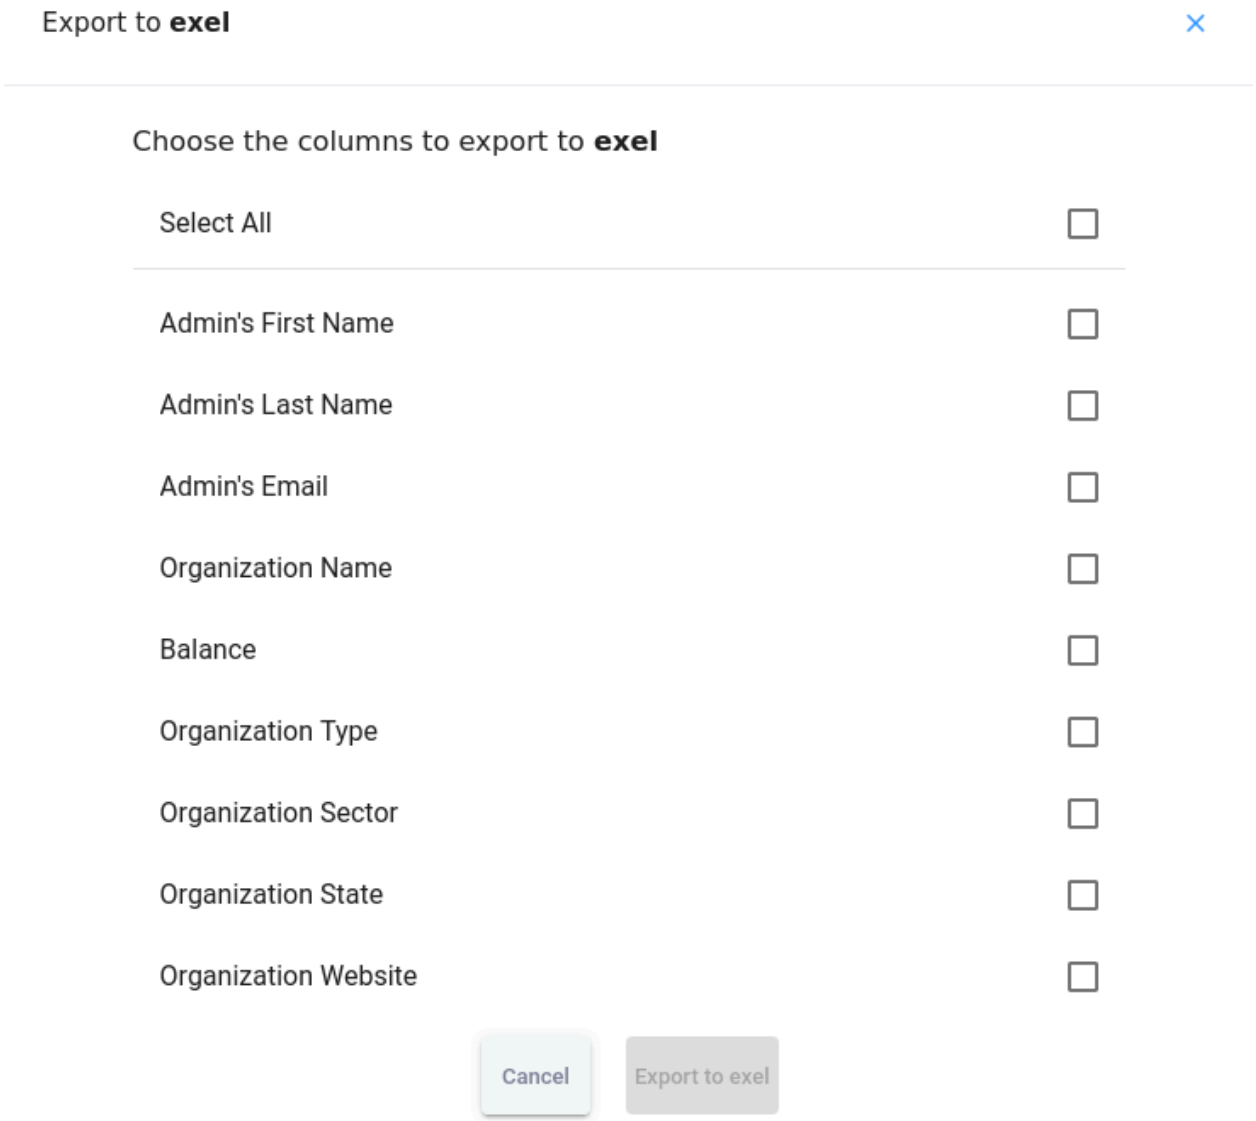

The user can apply a search on the displayed data as well as a filter by organization type.

If the super Admin wishes to export the displayed data he can do so by clicking the Export button, then he needs to choose the desired format (Pdf, Csv or Excel)

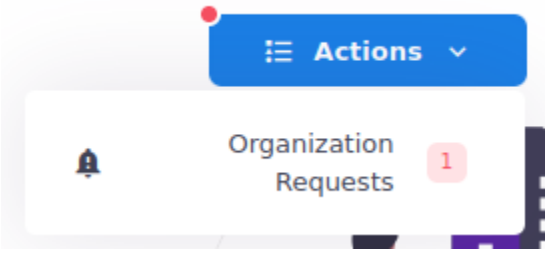

After he needs to select the data that he wants to export and click click the Export to … button

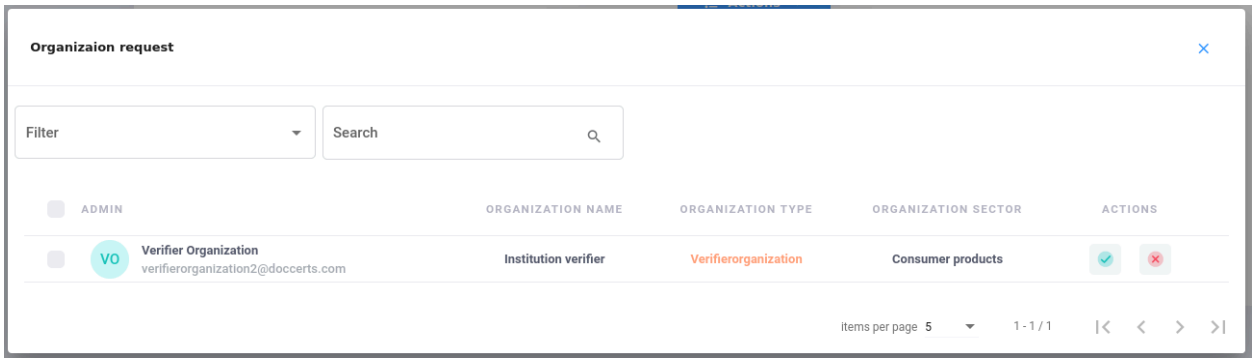

- Organizations request

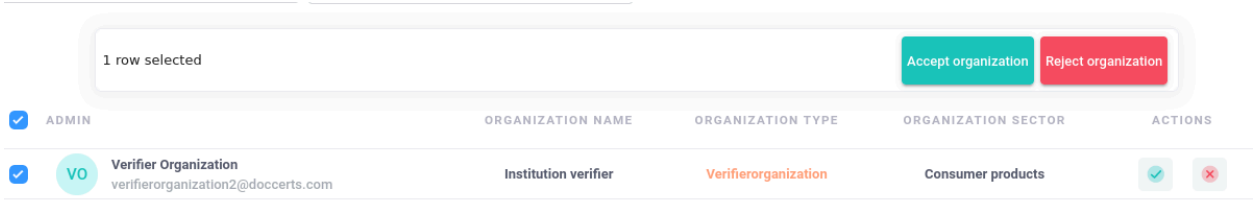

After an organization is created it status is PENDING by default , it is the superAdmin that needs to grant access to the organization account, he can do so by clicking the Organization Requests button in Actions .

Then a page will pop up where the super admin can either directly Accept or reject each organization request

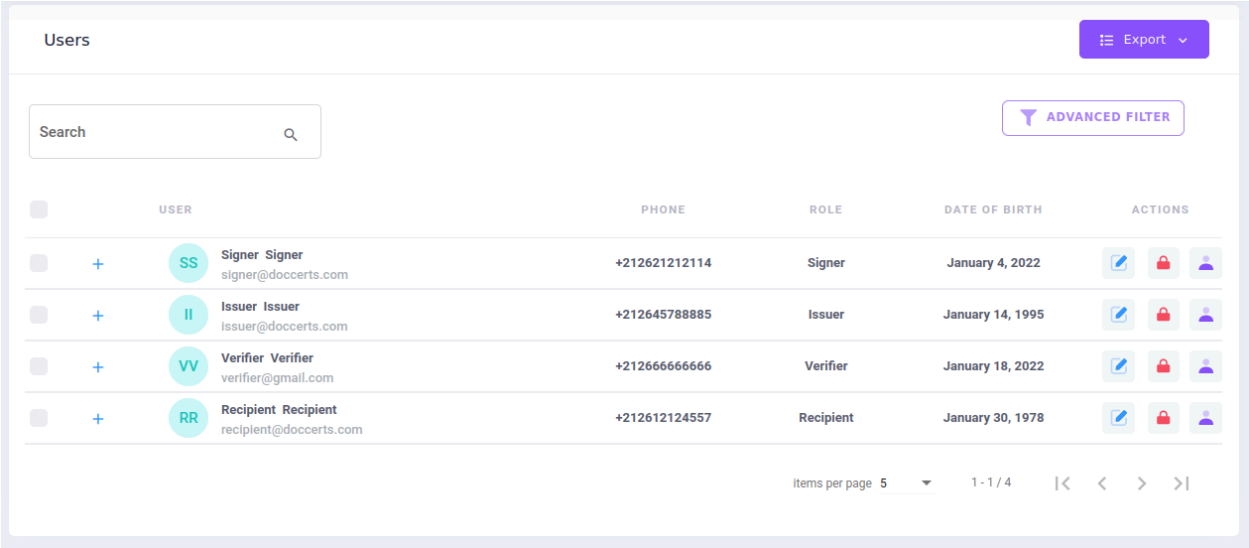

Or he can select a group of organizations and apply the wanted action on them like shown below.

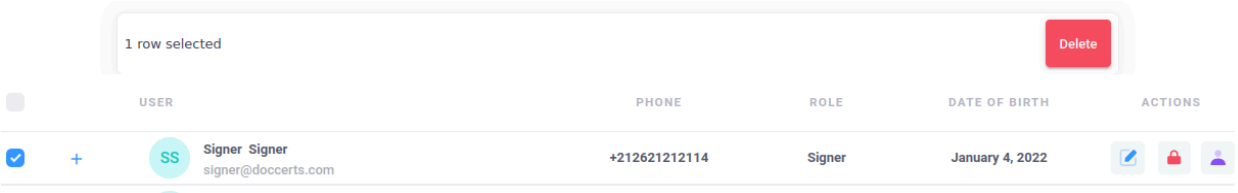

3. Users

In this section the admin is able to view all the current users enrolled in doccerts as well as perform certain actions on them.

The listing of users will provide a table with further details on each user including the users first name,last name, email, phone number, role, Date of birth and the actions column which includes the edit, block and impersonate account buttons.
The super Admin can apply a search on the displayed data.

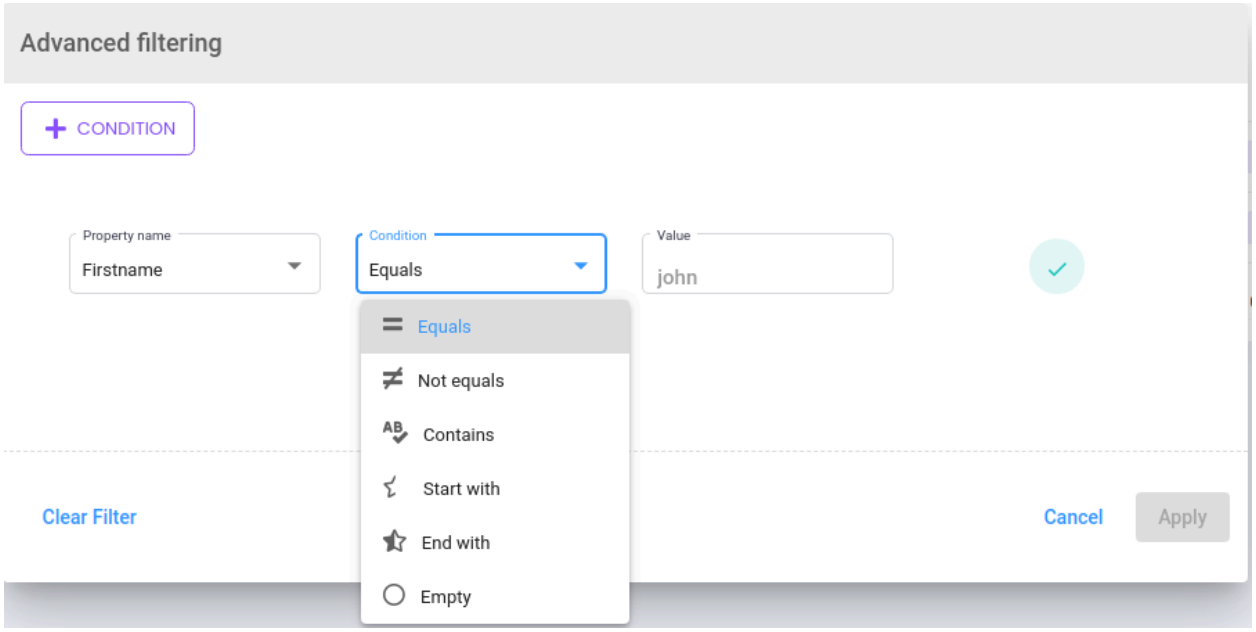

The super Admin can also delete users by selecting them first then clicking of the delete button as shown below.

- Advanced filter

This section provides advanced filter functionalities using one or multiple users fields , and making different queries to apply on the data.

The query contains the field/property name ,the condition(equals, not equals,empty…) and the value.

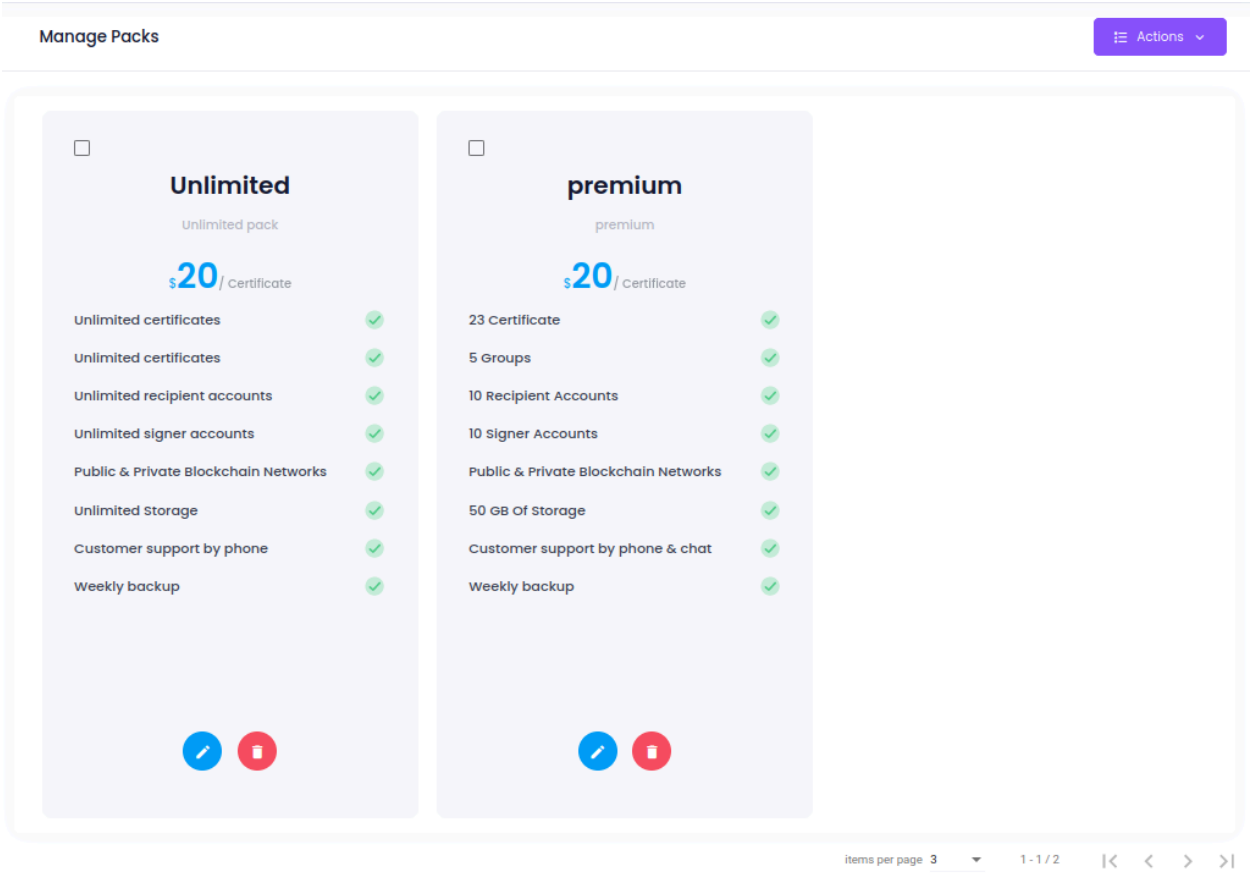

The Super Admin can add multiple conditions , and group them by selecting operators(AND,OR) .

4. Pack

In order for any organization to be able to use its functionalities, it needs to buy a pack first, here the Super Admin can create these packs.

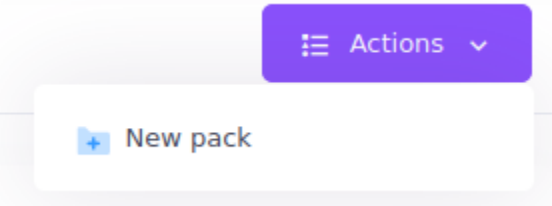

- Listing packs

The listing of packs will provide details on each pack such as the issuance price, the number of certificates, recipients, signers and storage amount as well as other information.
The super Admin can either edit, delete or add a new pack.

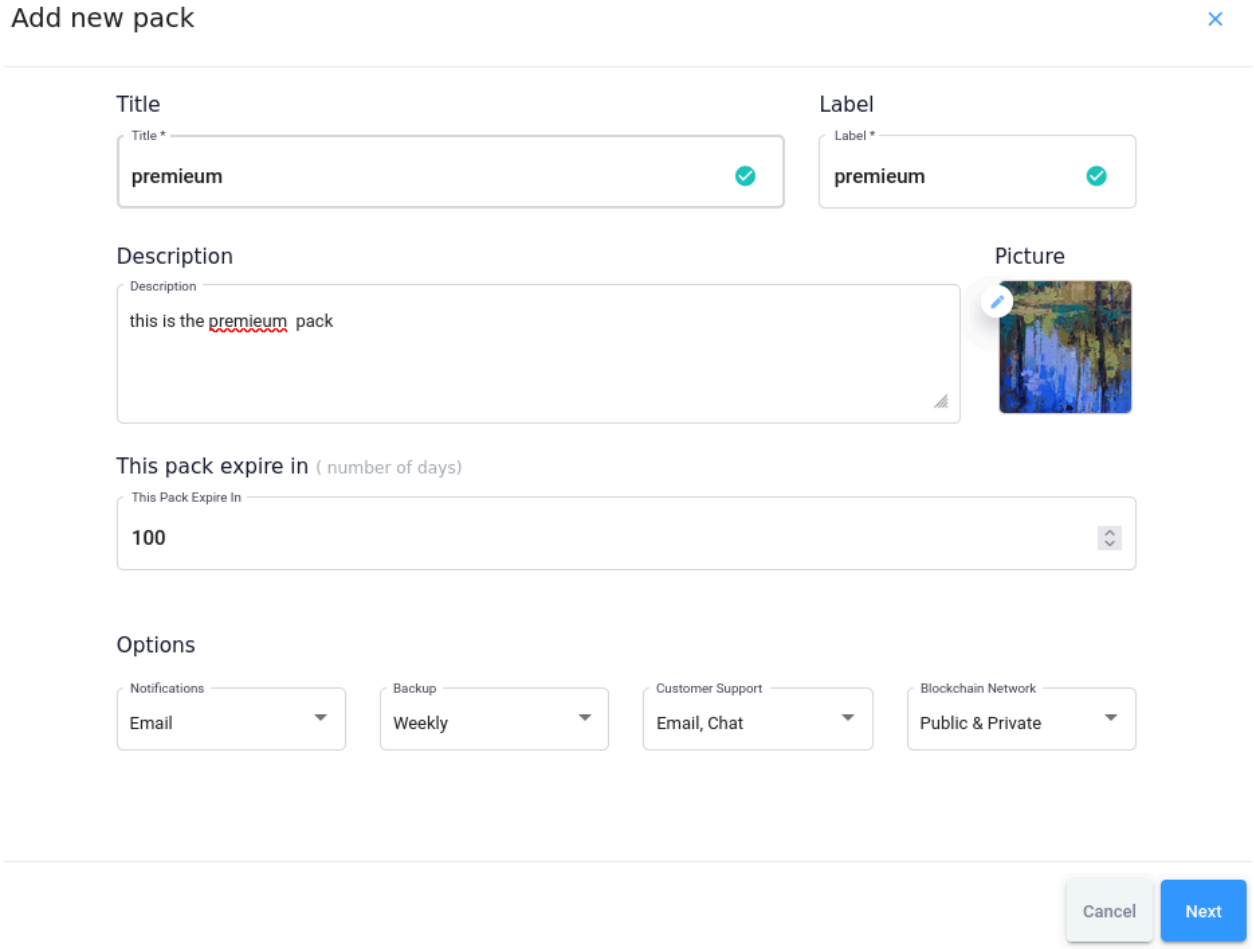

- Add new pack

The super Admin can add a new pack by clicking the New pack button in Actions :

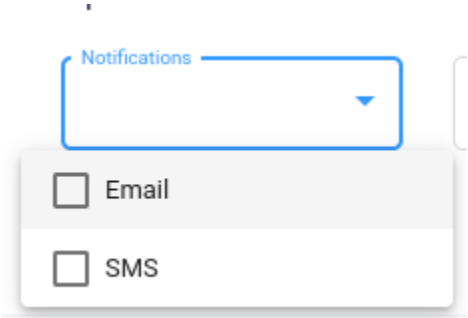

After doing so a page will pop up where he can add the necessary pack information such as : Title, label, Description, picture, number of days before the pack expires and the desired options.

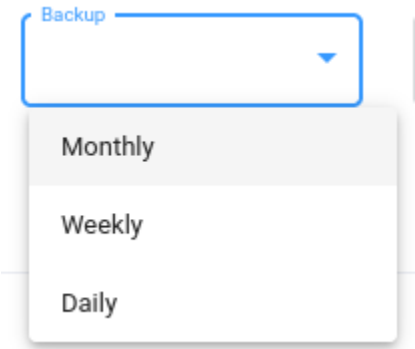

As for the available options that you can choose from, there is :

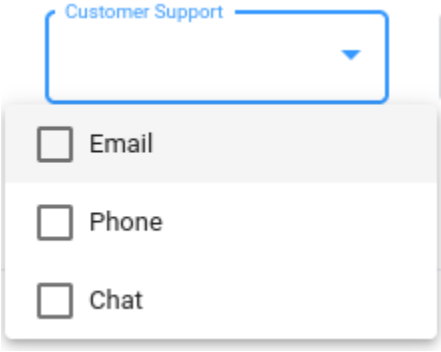

Notifications:

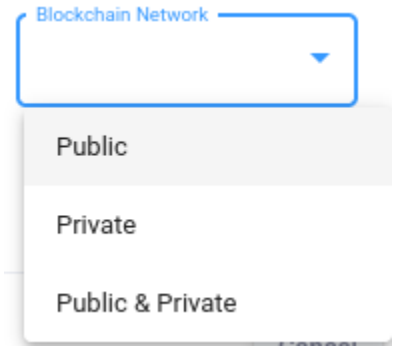

Backup:

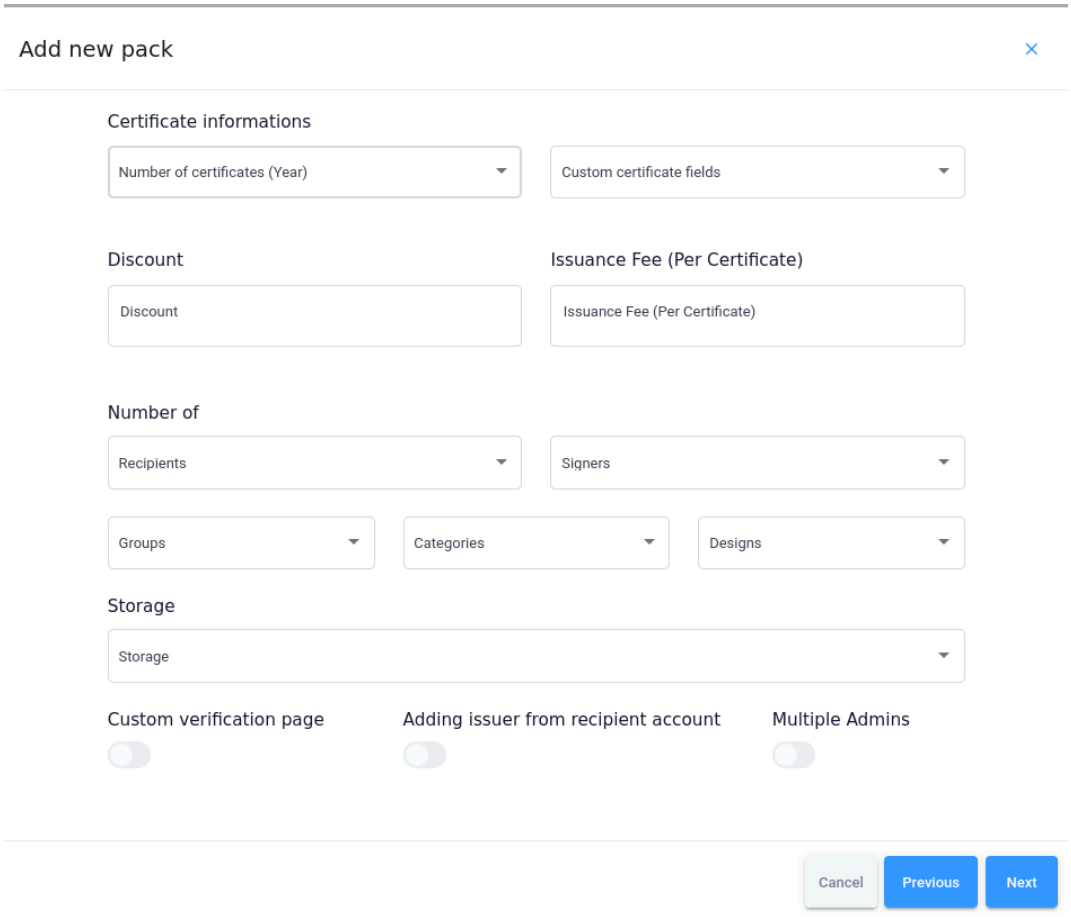

Customer Support:

Blockchain Network:

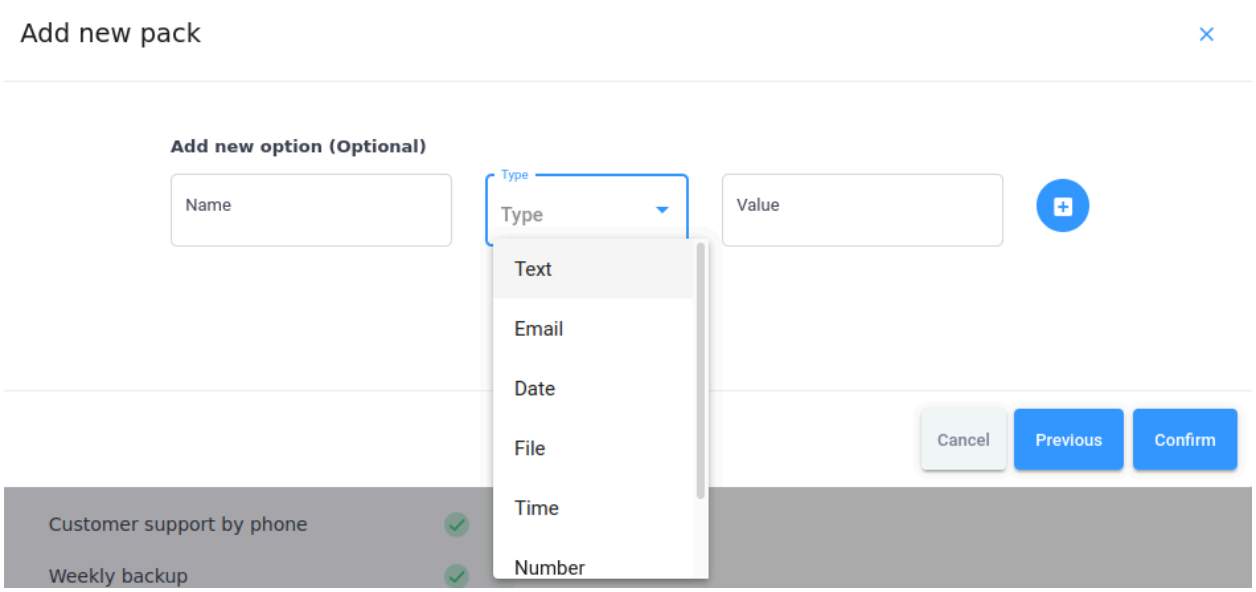

After the Super Admin is done he can click on the next button, this will take him to the second part of pack information, where he needs to add the number of certificates, custom certificate fields, Recipients, signers, Groups, Categories and Designs (Unlimited or number of his choice) he also need to input the issuance fee and discount if there is any as well as the storage amount .

When the super Admin is done entering the information he needs to click on the next button which once again will take him to the final pop up where he can add some custom options to the pack if he wants.

He can do so by entering the name , value and type of the option.

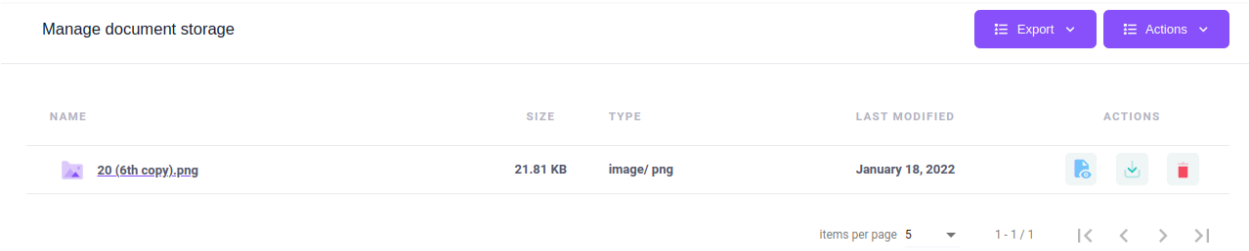

After he is done entering all the necessary information he can click on the confirm button to save his pack.

5. Document storage

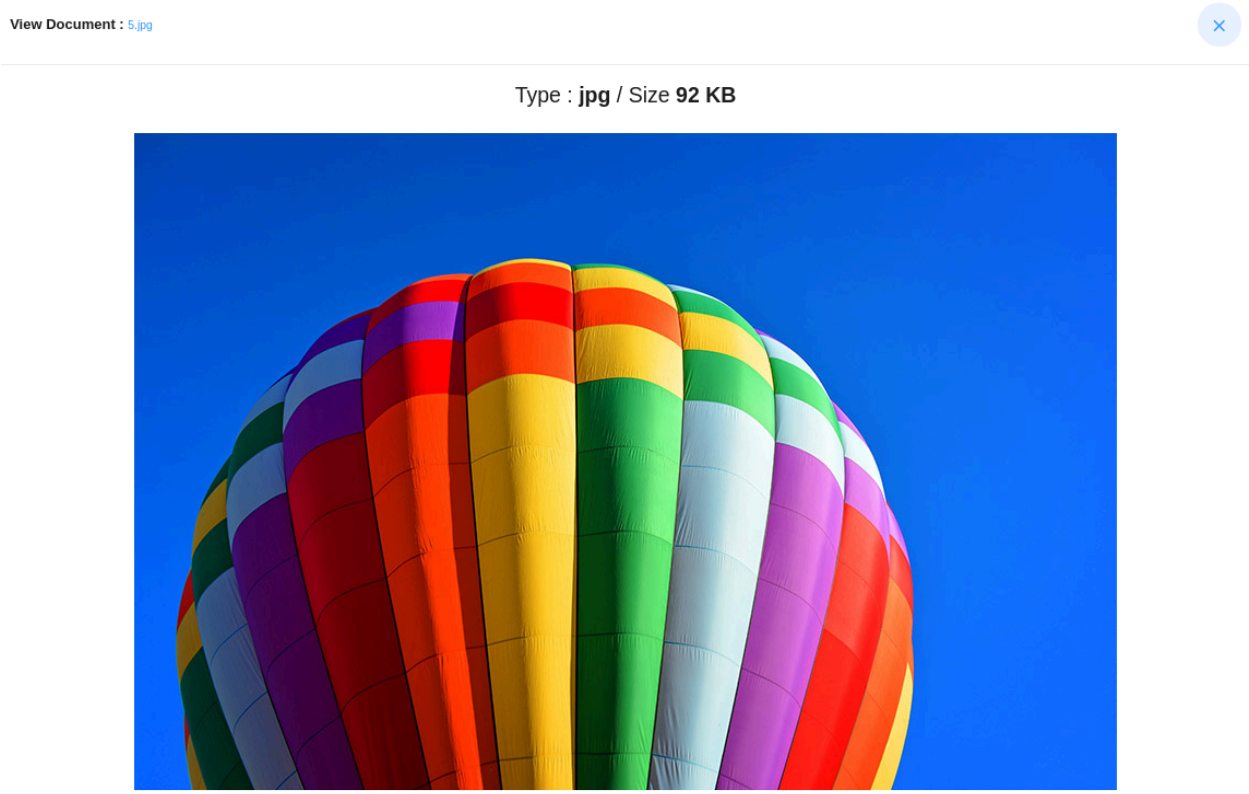

In this area the super Admin can manage all the uploaded documents/images , these documents can be used for profile pictures, pack fields …

- Listing documents

This section provides details about the document: document’s name,size,type,modification date and the actions column which includes view,download,delete document.

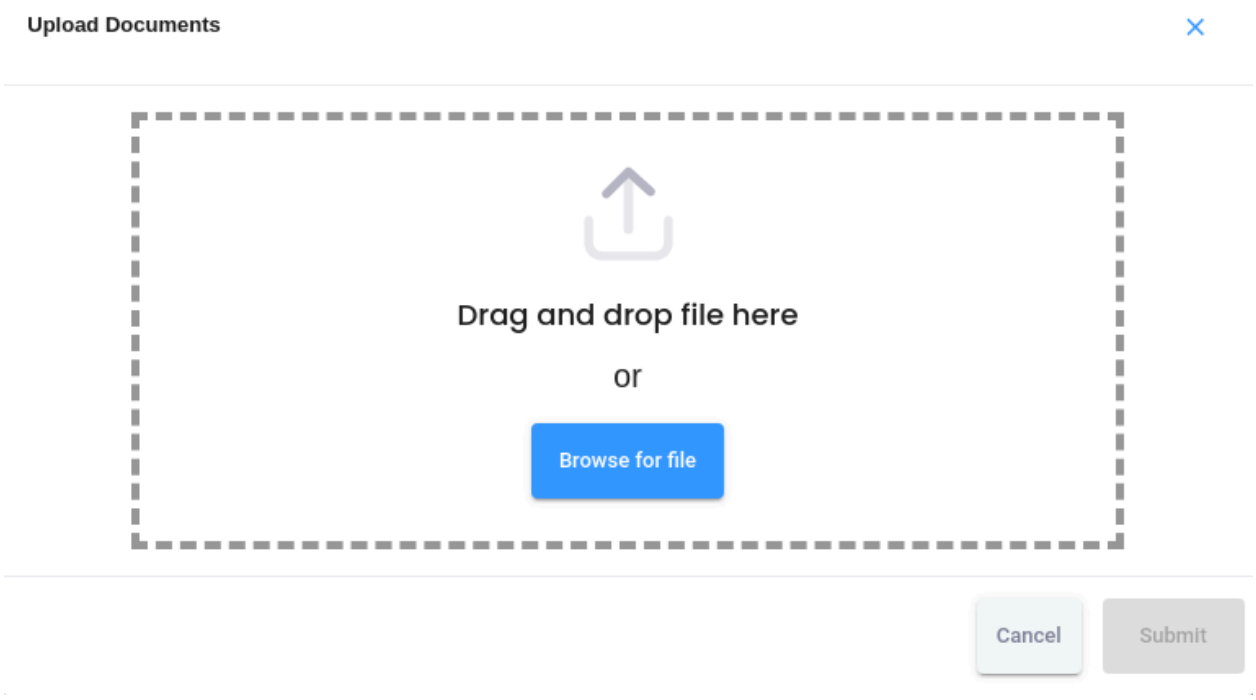

View document: the super Admin can display the document’s content either by clicking on the view button in the actions columns or by clicking on the document's name to open the file in a new tab.

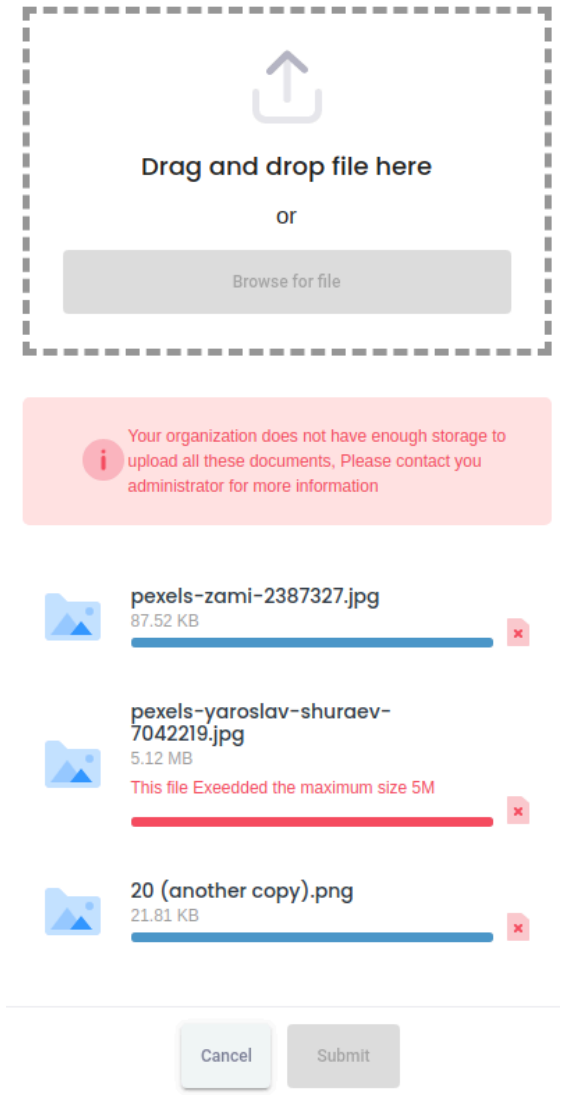

- Upload documents

To upload a new document(s), the user has to use the “Upload document” button in the actions drop down on the header.

A new popup page will be shown, where the user will be prompted to drag and drop or browse for a file.

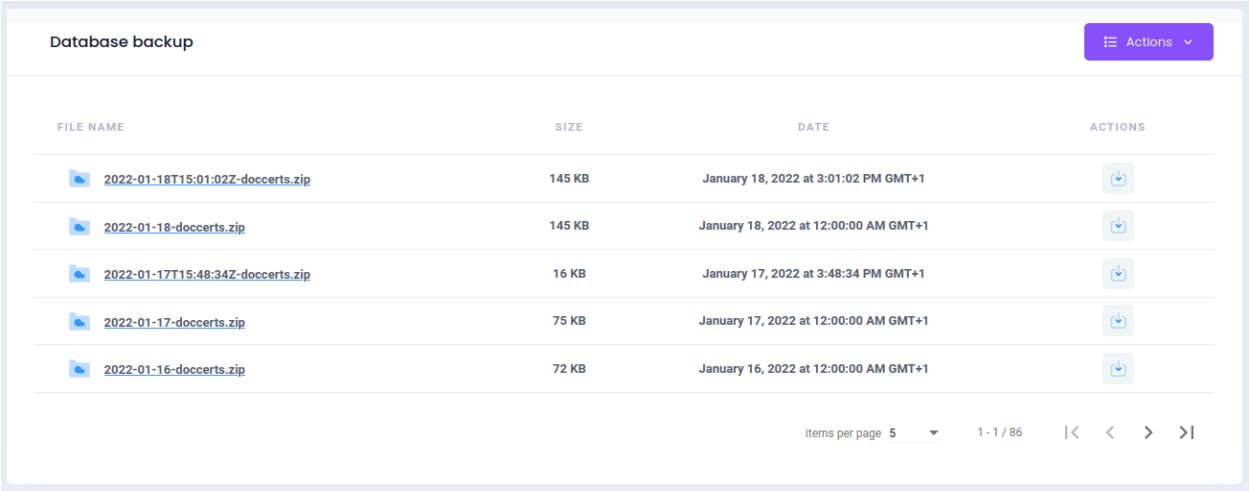

The user can upload one or multiple documents.

The section only supports images (png/jpg/jpeg).

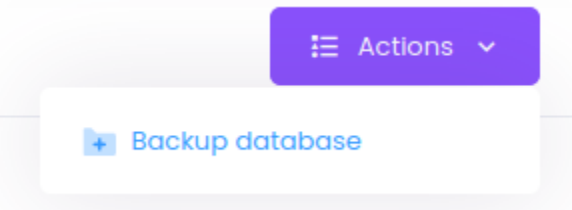

5MB is the maximum size that the file must not exceed.

6. Database backup

This section allows the Super Admin to view, download the database backup as well as create a new one.

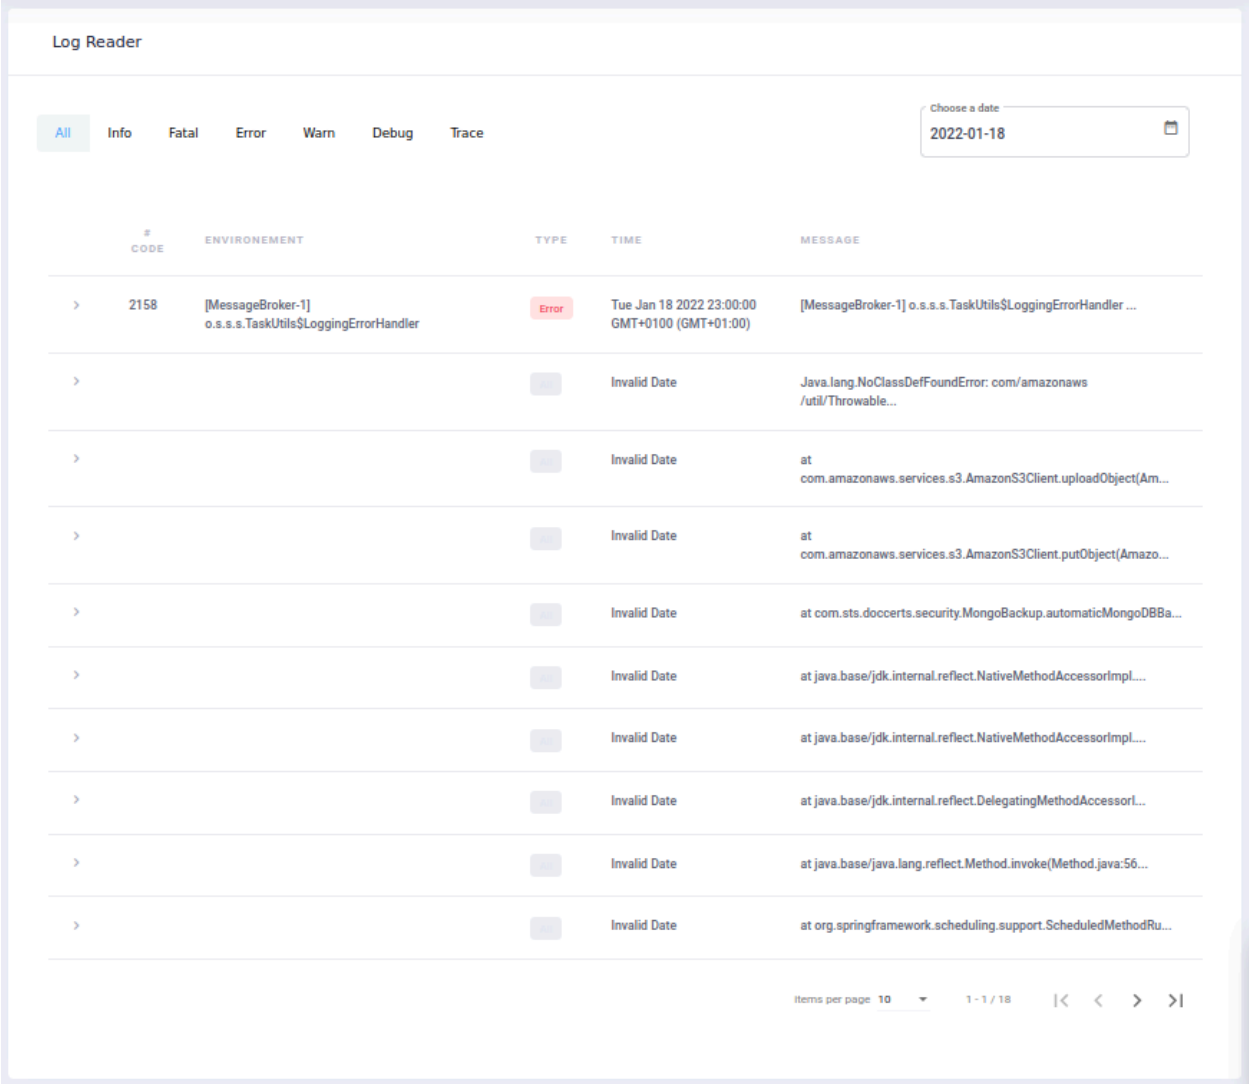

The listing of the database backups is provided in the form of a table that holds more information such as : file name, size, date and an Action button that allows him to download the backup files.
The super Admin can create a database backup at any moment by clicking the Backup database button located in the Action button at the top right corner.

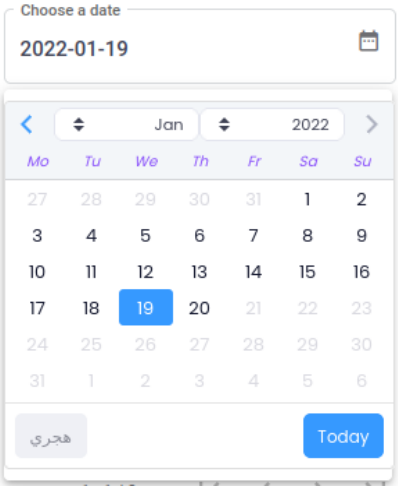

7. Log reader

The log reader allows the Super Admin to monitor the application performance and all executed functions, he can also view any appearing bugs, errors, warnings etc.

In this section the Super Admin can view all the performance details by switching between the existing tabs : All, Info , Fatal , Eroor , Warn , Debug , Trace.

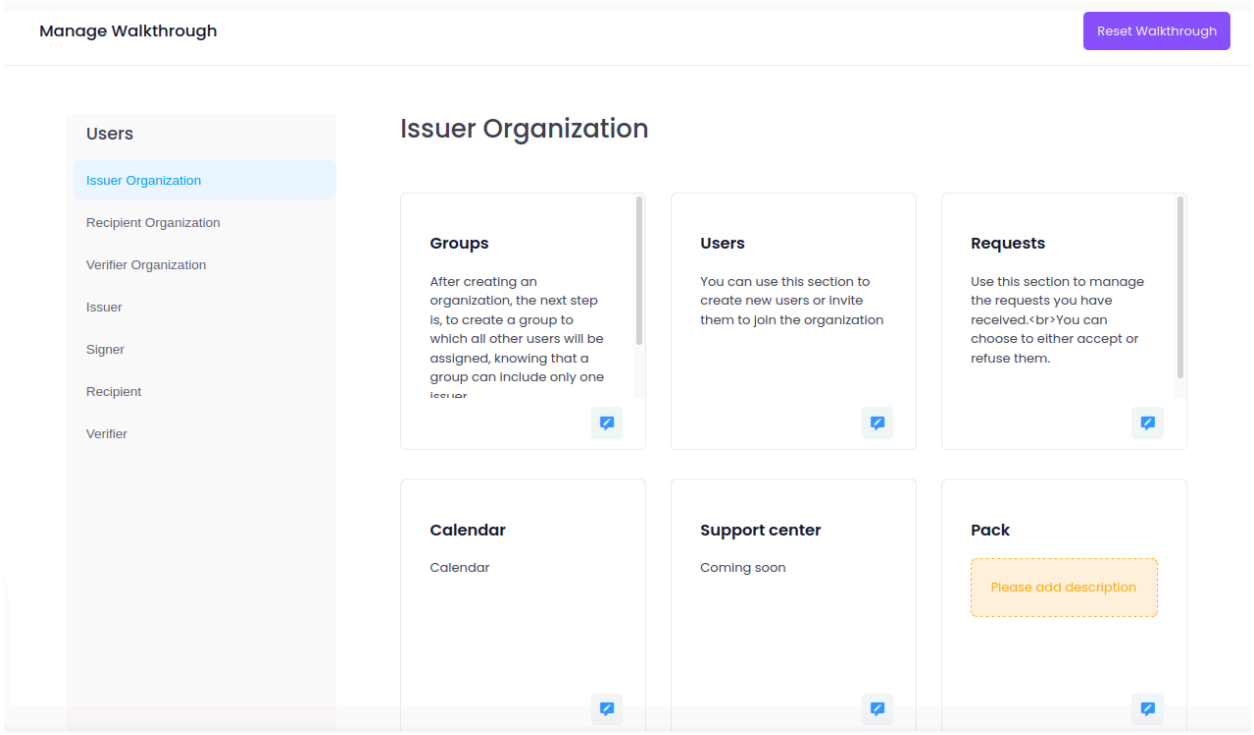

The Super Admin can also filter all information by date using the calendar in the top right corner.

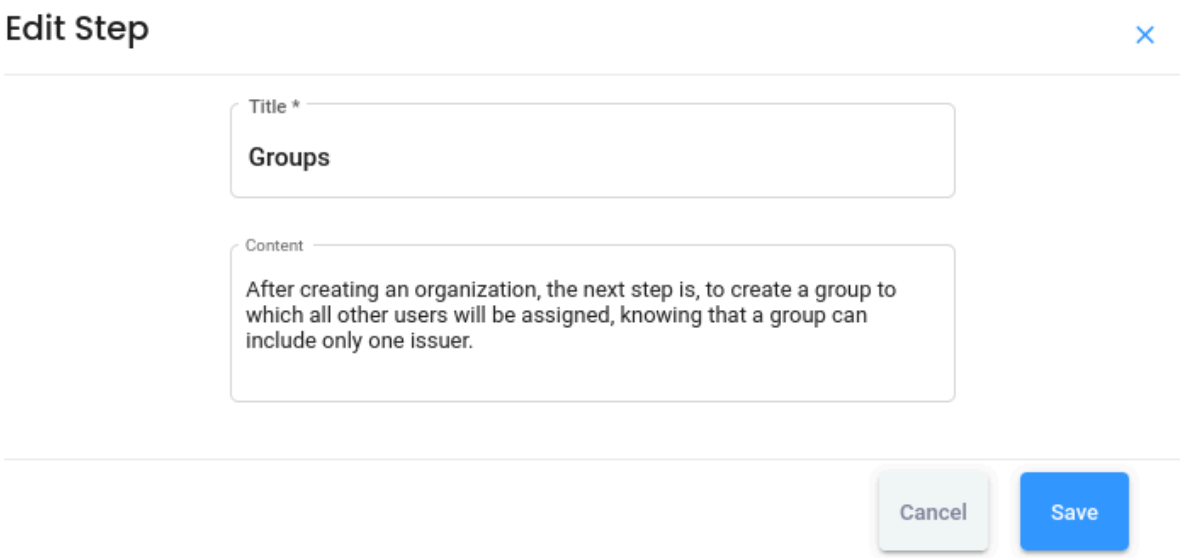

8. Walkthrough

This section’s main functionality is to give the super Admin the ability to customize the walkthrough.

The super Admin can switch through users to view the steps of each one, these steps can also be edited.

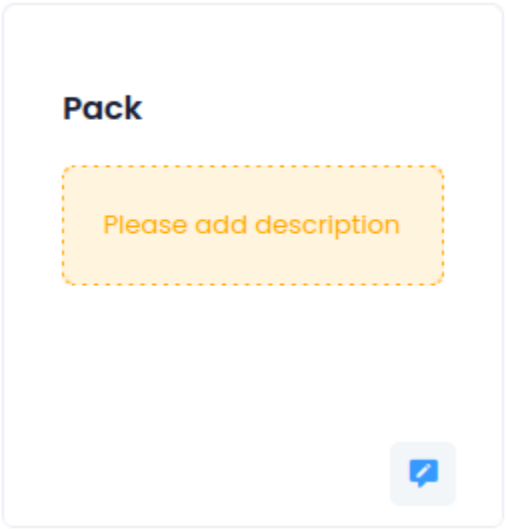

To edit a step the super Admin needs to click the edit icon in the bottom right corner of each step, which will trigger a pop up page where you can edit the title and the content of the steps.

If an element is added to the side bar and this element needs to be added to the walkthrough the super Admin can start by clicking on the reset Walkthrough button.

If a new step is added it will be displayed as shown below.

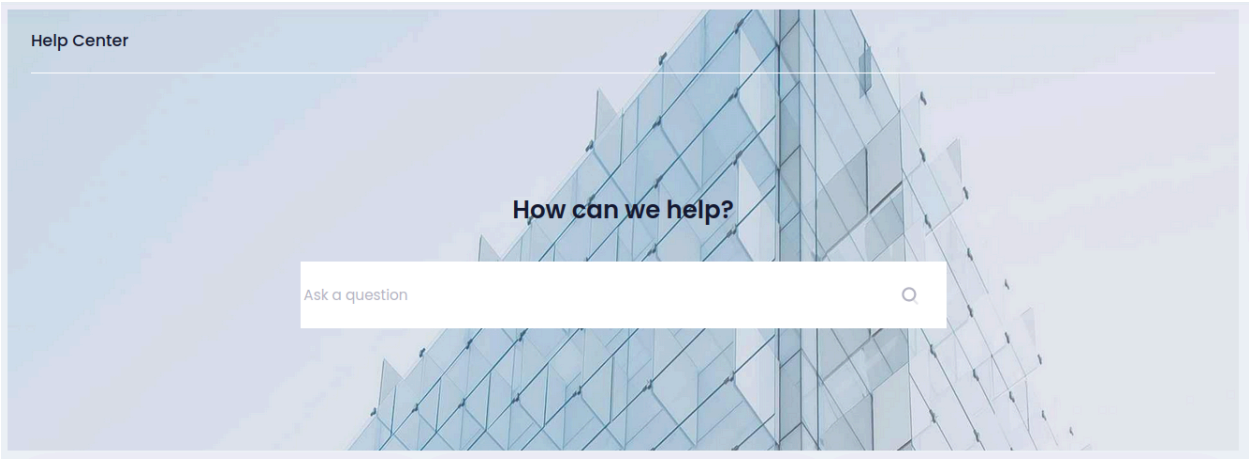

The super Admin will then need to add a description for the step.

9. Support Center

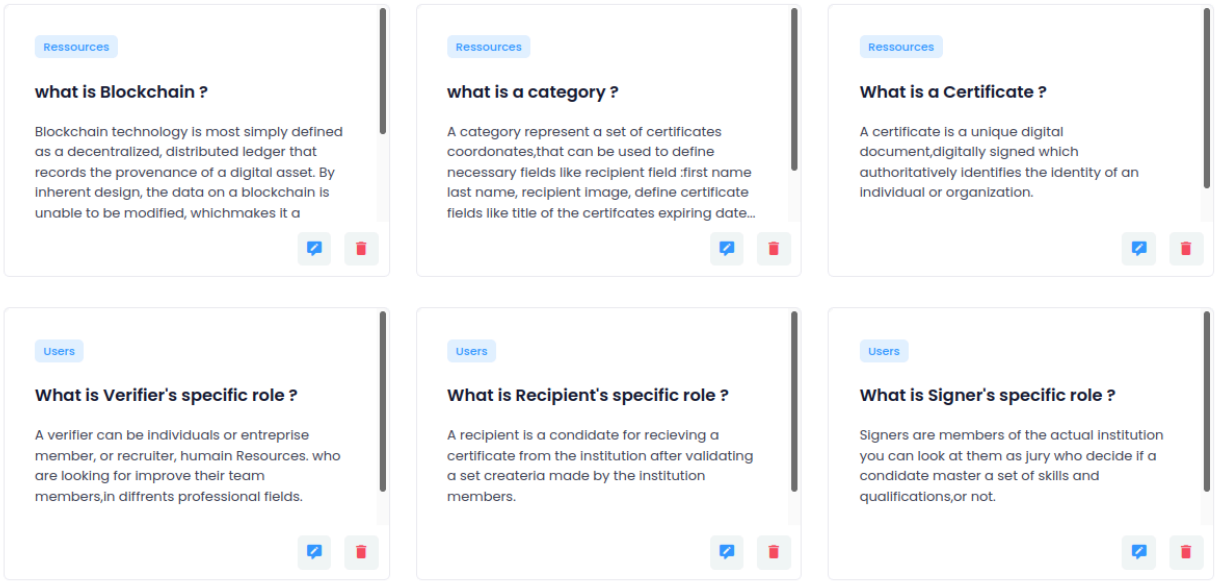

- Help center

This section allows the super Admin to filter through the existing questions, the answer to a question will be displayed in the received questions section.
If the question does not exist you can always add a new question by clicking the Add question button bellow this section.

- Received questions

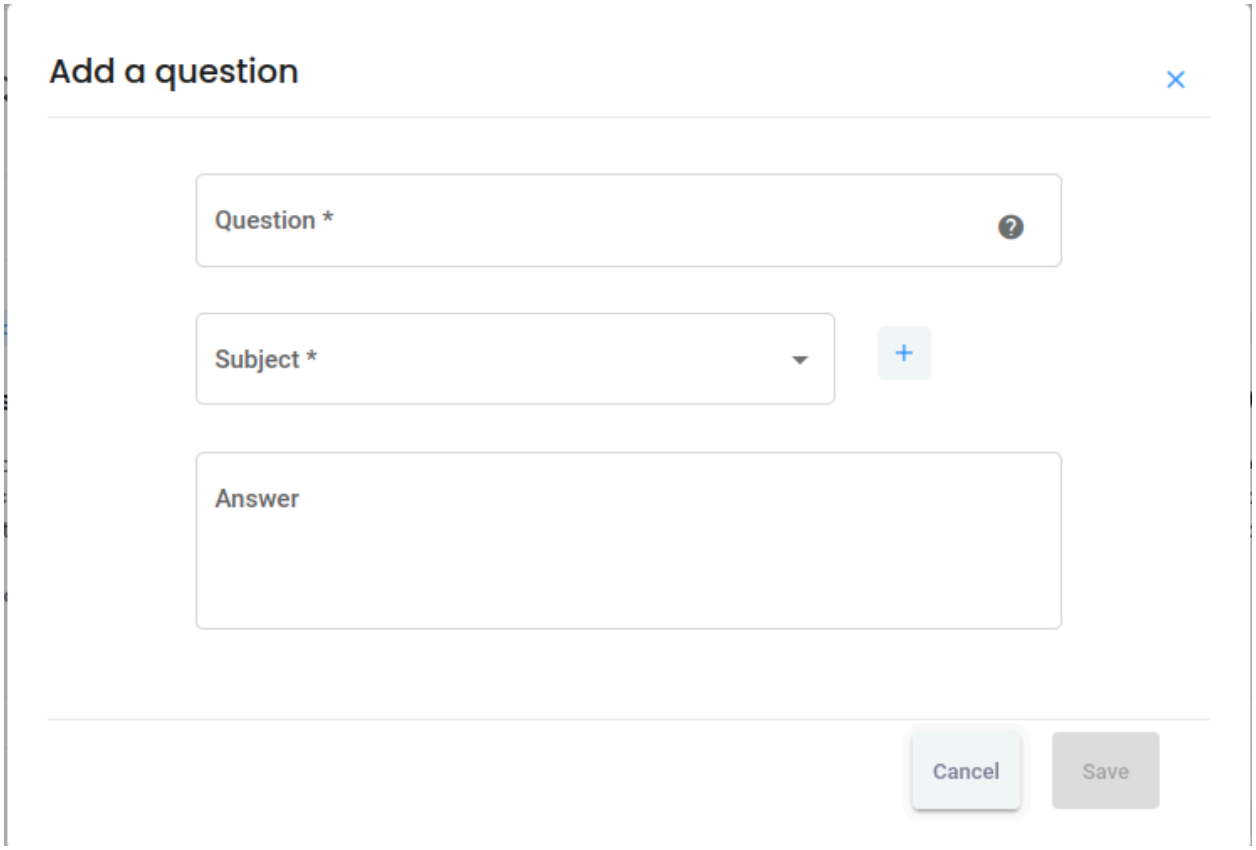

This section displays all questions that need to be answered by Super Admin as well as the already answered question, the super Admin can answer received questions , edit existing questions and if necessary delete them.

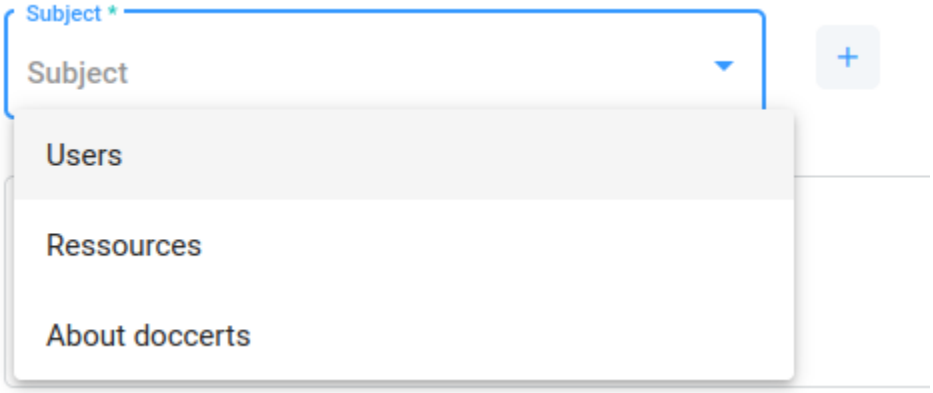

A super Admin can also create new questions by clicking the Add question button in the top right corner of this section.

A pop up will be displayed where the super Admin needs to fill out all the Question and Subject before the save button can be disaled, he can choose to answer the question later.

As for the available subject for now there is : Users , Ressources and About doccerts.

If the Super Admin wants to create a new subject he can click on the plus button, and a new input will be displayed, then he can just enter any subject and click on the Add button to save it.

The super Admin can also delete a subject.
